This to be used for antenna grounds or grounding radio equipment.
Do not use this as a ground for your electrical box as it does not comply to national code.
You have to use a solid 10 foot ground rod for grounding of electrical service entry boxes to comply with code.

Instead of using a solid ground use a copper pipe.

Purchase a 10 foot section of rigid copper pipe, take a hacksaw and cut one end on an angle to form a point.
Next part you will need an old 3/4 inch garden hose that will fit over the copper pipe.
Two worm type hose clamps , Make sure these are stainless steel.
A step ladder.
A helper.

Cut the male end off the garden hose, install on pipe and secure with hose clamps.
Make sure they are tight you don't want the hose coming off.
Take the female end and connect it to the faucet.
Now position the step ladder in the area where the ground is to go .
Now while your on the ladder have your helper hand you the pipe, have them turn the water on slowly and soak the ground a little, turn the water up half way and then insert the angled end of the pipe into the ground about 2 inches and have your helper turn the water all the way on while placing downward pressure on the pipe.
The hydraulic action of the water will work like a drill bit and the pipe will go into the ground with less effort then using a sledge hammer.
If the pipe gets clogged with dirt lift it up until the water pressure clears it .

As the pipe goes down you will be able to get off the ladder and finish pusing it into the ground.
When you get where there is only six inches of pipe above the ground stop and have your helper turn the water off.
Loosing the hose connection at the faucet slowly in case there is still some pressure on the line.
Then disconnect the hose from the pipe, clean up the pipe with emery cloth or steel wool, connect your ground wire using one of the hose

clamps.

Actually mackey, a tv antenna is a log perodic beam for the reception
of tv signals if you want to get technical about it.
But it is also good for receiving signals other than tv, maybe it should
be called a multipupose log perodic beam .

I just bought a Radio shack glass mount mobile antenna for my car for $30. It doesn't seem to work all that great. No better than the rubber ducky already included. I might return it. Since it is stick on, how do I get it off cleanly?
Anyone else concur with my observations on its performance?

Eric

You ever hear of a "village idiot"?

Well, Mackey is the newsgroup idiot and
laughingstock. Kind of like a butt-ugly
mascot that you hate to get rid of because
he takes a kicking so nicely.

Our Mackey has no interest in scanners and
scanning, so it does make you wonder why he's
here instead of somewhere else. But I can
tell you why.

He has a fixation on me. He's been electronically
stalking me for three years. One of those kinds
of deals..... hard to understand. But we just
laugh at him. He's a lot like a sticky fresh-
picked booger on the end of your finger....
You try to wipe it off or flick it away somewhere,
but it just sticks.....

Know what I mean?

Ooopppssss ... My mistake ... Maybe I should read the title first. What I used to buy (and just bought the new edition) was Gene Hughes' Origional Police Call Radio Guide. It has maps, codes, Call Signs & frequencies. This is not the same Police Call Radio Shack sells.

What I bought this time was GRS Government radio Systems. It doesn't have the maps or call signs but it seems to be an easier book to follow. It does include PL tones for those needing that info.

I just bought the Southland version which includes Los Angeles & Orange counties, the State of California for those counties And Federal agencies for those counties.

I also bought the San Joaquin Valley region which includes Kern, Tulare, Fresno, Kings counties and up the valley.

The combination of the 2 makes a great resource, especially when travelling.

I bought all of the above at Ham Outlet in Burbank.

Good Luck

Mike

Does anybody know how to get the display light on the Uniden SC150
to *stay* on. As manufactured, it only will stay on for 15 seconds at
the push of the light button. For indoor use or in the car when it's hooked
up to external power, it would be nice to have the light on continuously.

Thanks in advance,

If you mount the antenna vertically (which it should be) be sure to use a non-metallic mast pole such as wood or fiberglass. The metal mast pole in line with the vertical elements of the antenna will disrupt the antenna pattern!!

You said you know where you're putting the scanner, so I won't go into that (except to say you could put it in the glove compartment, if it's big enough - I did that once) but for a good antenna, your car already has one. Yup, that same antenna that is connected to your car stereo will work just dandy. Get a splitter, motorola to BNC connector and 2 radio antenna extension cables from your friendly neighborhood radio shack. Connect the antenna to the splitter, then connect the cables to the splitter, route one back to the car stereo and one to the scanner. I have used this setup many times and it worked fine. If you want, you can add their $12 FM booster to the scanner side for even better reception. And, no one will be able to tell there's a scanner on board ;-)

You should also hook it up so that the scanner is only powered when the car is on. That way, should you get pulled over, turning off the car will turn off the scanner as well, so you don't attract attention to yourself as you scramble to turn off the scanner, making the officer think you have something to hide.

Also, in most if not all of these states, having an amateur radio license exempts you from the scanner law, so if you don't have one, you might want to look into it.

-Phil

Well, I've got good news and bad news for you. First the good:

PC895 does a lot. (It would be easier to tell you what it *doesn't* do!) It controls just about everything that can be done with that radio, and a few things that can't. For example, you can set up a search, and then have the program log each unique frequency hit. You can even set it so that once a frequency is found, the scanner will skip it so you can find more frequencies in less time than conventional searching. There is a trunked version of this feature, which does this for talkgroups as well. When you are done searching, you can select the good ones and shoot 'em into the included database, for programming later.

It will also program your favorite frequencies into each bank with a simple double click of the mouse. You can easily make what I call "scan lists" that contain frequency, agency, designation, bank, delay,etc. You can also build trunked scan lists, and store fleet maps and talkgroup ID's which are uploaded to the scanner in the same manner. This is great when you travel, and take the BC895 along. Whenever I go to Arizona, I can load all 300 channels in about a minute. Theres tons more, this is just the beginning.

And now the best part: It's free. Gratis. Given away. Costs you nada. I used to sell it, but I simply could not provide the level of service and support you'd expect for such a product, so now it's free.

Now the bad news:
PC895 is *strictly* Win95 or NT. I tried to make a win 3.1 version, but it just flat out don't work. I think it has to do with the way Win 3.1 handles it's com ports, I don't know. But I couldn't make it happen. I am still working on a DOS version when I get time (which, between wife, kids, job, and sleep, is practically never), but it's a long way away from being like it's Win95 big brother, and I may just scrap the DOS version entirely. I just don't have time for them both.

That 486 should still be able to run Win95 - I had one running it with just 8MB of RAM. It was as slow as a turtle in a snowstorm, but it did work. Just a thought.

Hello all,
The local emergency services are switching to a GE/Ericsson
system so.... I am looking for a computer controlled scanner which I can
use with future software that can follow this new system. I want to buy
this scanner in Canada if possible, if any as any locations where i
could find a comuter controlled scanner up here I would be very
greatful.

Thanks, Matt

Database programmer to the rescue!

Foxpro (Spectrum's database engine) is trying to create some temp files on your drive, but can't because you don't have rights to that directory. Check your permissions on your drive, and if possible, grant read/write access to yourself. (I assume you're running NT at home, and can actually do such a thing. If not, you're stuck with it, unless your admin lets you have those rights.)

>they'd prefer to access the Internet from one of those better systems
>such as a Commodore C64 or an Adam.

<Sniff> Brought a tear to my eye...

Actually, he was the coordinator for the project, overseeing some of his college buddies who did the real work. Then IBM wanted a user friendly OS to use with the first PC - something they thought would be a passing fad. They approach Bill, who immediately takes full credit for the job (like any good supervisor does..) and sells it to IBM on a per system basis. The PC flourished and Billybob becomes a millionaire overnight.

Soon other, better DOS's appeared and Bill started losing ground,. So he got his (by this time enormous) team of programmers together to reinvent the mac. Hence Windows was born.

But it sucked. Version 1.0 had more bugs than features and people began to make up such names as MicroSloth and MicroShaft. Bill persisted through it all and made versions 2, 3, 4, and 5. Windows 98. Not bad, it only took them 5 tries to get it right - almost.

Windows 98 works well, but because of greed on Bill's part, Microsoft is in deep doo-doo over it's huge dependance on Internet Explorer, which has beein integrated into the package, forcing millions everywhere to buy yet another buggy program. Release dates have taken priority over quality at Microsoft (nothing new there) and the OS is still light years behind the hardware it runs on. Pathetic.

People *should* go out and buy something else. Many PC's work just fine on the many different variants of Unix, a much better OS, in my opinion.

Problem is, in my line of work, (applications programming) majority rules, and the majority uses Windows. I could spend my time writing for Macs and

Unix boxes, but I wouldn't be able to sell very many programs, now would I?

Sure Gates is a brilliant businessman, but that doesn't mean we should all bow down and kiss his ass. I'd love the opportuniy to tell Bill where he can go today...

Sure, there is EDACS trunktracking available......it involves a computer based application and two scanner setup. One scanner is used to monitor the EDACS control channel, and another scanner is used to "be tuned." I use this to monitor the City of Irving TX, City of Richardson TX, and the DFW Airport dept of public safety.

It requires descriminator output from the control channel monitoring scanner, a standard "hamcom" interface to the computer, the etrunk.exe application, and a computer controlled scanner. It sounds complicated (and it is..), but it works.......

See http://web2.airmail.net/lblant1/dfw/digital.htm for schematics, downloads, and instructions on how to get started!

3368. Re: Weak Audio on Motorola Trunk Systems

Newsgroup: rec.radio.scanner
Date: 1998-07-24 00:00:00 UTC
From: Millimeter Wave Report <mmwr@email.msn.com>
Message-ID: <Os4CLrDu9GA.271@upnetnews03>
Source record: 151097

The volume difference is more than just "quiet" systems vs. louder ones. I received email from an RF System Administrator who explained that the 800 MHz systems are limited to 3 kHz deviation, vs. the 5 kHz deviation allowed on the other bands. This seems to explain the difference in audio quality. The deviation limit may be related to interference considerations in the fairly crowded 800 MHz SMR band.

I'm surprised that the difference in audio quality is not noted by more people. To me, it's night and day, and makes listening to 800 MHz systems (even on a trunk tracker) less enjoyable than listening to other bands.

Maybe I'll have to buy one of those automatic audio controls mentioned in the earlier posts!

FS: Cell Band Scanner Setup

I have for sale a RS Pro 2021 scanner with GRE 8001 frequency converter.
The 2021 has 200 channels, covers 30-54, 108-174, 380-512 MHz. The converter adds 810-910 Mhz.

Both are in good working condition, cosmetically fine. Sorry, I lost the manuals. Asking $125 for the pair, shipped.

Just got a BC9000XLT and wondering what the Hi-Cut button does? No apparent explanation in the manual.

Thanks!
oceans1@ibm.net

Don't use this scanner as much as my HH. It has been modified to 100channels and cell reception. 1 touch weather button. Includes original box, ac adapter and antenna but no manual (easy to figure out the operation of this one). I pay shipping.

$140.00

This sounds great. I know of at least one town where they set the deviation
very low on the "County" frequency (they use noise cancelling mics on the
mobiles and turn down the dispatch) and as high as possible on the "City"
frequency and you can imagine how annoying that is.

You aren't saying that the person who told the listener to do it is just as
guilty, are you?

Boy. Do you have a lot to learn if that's what you are saying.

I just moved here to Coos Bay, OR. and noticed that the PD's use 12-code (i.e., 12-39), as opposed to 10-code. Does anyone know if these correspond to the 10-code chart? [which, of course, I don't have! :(]. ALSO: Any other areas that use this practice?

Thanx,
Don

You can use vise-grips snapped onto the rod in a more convienient place and
drive it down with a hammer, kind of ugly but it works. I've seen people use
a backhoe to push the rod home. A large drill motor can also work, just
grind the tip so it cuts its way through. My ground rods are down 16'.

Best Wishes

3385. WTB interface

Newsgroup: rec.radio.scanner
Date: 1998-07-24 00:00:00 UTC
From: scasko@aol.com
Message-ID: <1998072415410600.LAA24099@ladder01.news.aol.com>
Source record: 151136

I have a copy of Trunker up and running. I have a scanner with a discriminator output driving it, and it works well. I have an AR8000 that I also run through an interface. What I am trying to do is "interface the interfaces" together so I can get Trunker to drive the AR8000. I would like it to be able to read the data channel from the one scanner and use it to drive the 8000. Both interfaces I have use the serial port, and I only have one. Is there some way to hook them together so I can do what I'm trying to do? Is there some way that I can rewire them both together into a single 9 pin plug, or is it more involved than that?

If there is someone who cold build me a complete unit, or the rest of the parts I need, I would be interested in buying it from them.

Any advise would also be welcome....

Thanks

Steve

think of it as a "trebel" control...it attentuates the high audio
frequencies.

The easiest method to sink a ground rod in clay soil is the "butter churn" method. Dig a hole about the size of a quart mason jar as a starting point. Fill this with water. Now grab the rod and plunge it into the bottom of the hole. Work it up and down as if you were churning butter. Lift it completely out of the hole every couple of feet, and add a bit of water as needed to keep the hole nearly full. The rod should be fully down in under 5 minutes. Now *leave it alone* for a couple of days until the water has all dried up. This allows the mud to "set" around the rod and give you a good electrical connection to Earth.

If you hit a big rock, your progress may be stopped. The best way to deal with this is to chuck a hammer drill to the rod and beat through the rock. But you can do it the old fashioned way with a sledge hammer too. Just be careful about mushrooming the head of the rod. A post driver can be used instead of a sledge. That's just a heavy length of pipe with a cap on one end and a pair of handles welded on. You slip that over the rod and pick it up and let it drop (again and again and again).

"Churning" is the poor man's hydro-drill. It works on the same principle, using hydraulic pressure to force mud up the sides of the hole and into the "mud pit" you dug at the top. You'll be amazed how quickly and easily this works.

Tell me about YOUR posts. Where can I find
yours so I can use them as a role model to
determine exactly what you mean?

You talk a good line of shit, stinky, but
I need examples.... you know, SHOW ME how
it's done.

.....except you can't, huh? You can't,
because you're one of those stinkin preachers
who practice DO AS I SAY, not as I do.

Which makes your gene pool kind of suspect.
It's beginning to look like you are one of
those "clones", the DNA of which was
inadvertently taken from pond scum.

If you disagree, then show me something
different, numbnuts.

No kidding, he's a PIG FARMER?
Wowwwwweeeee.....I didn't know that.

This is getting very confusing. First
I hear he's a doctor, then a cowboy,
then a sucker, and then a nun. And
now he's a pig farmer, too?

Shoooey, that lad is a boy of many talents.
Him having trained those pigs was pretty
funny, I'll admit.

<wink-wink>

3394. [?] Looking for info on software packages for the AR5000 receiver

Newsgroup: rec.radio.scanner
Date: 1998-07-24 00:00:00 UTC
From: David Chapman <dave@chassis.demon.co.uk>
Message-ID: <38knWLA9jEu1Ew4H@chassis.demon.co.uk>
Source record: 151145

Just wondering if anyone knows whether a comparative survey has been done covering the various software packages designed for controlling the AOR AR-5000 receiver from a PC running Windows 95 and/or DOS.

I'd like to know about comparative costs (when purchased in the U.K.), their user-friendliness (i.e: idiot-proofing !), and any special facilities provided - particular with regard to scanning between set frequency limits to record activity and then logging the results to disk.

So far I have heard of Spectrum Master, Scan-Cat, AR5 and another produced (or just offered ?) by AOR-UK, but I have not seen any unbiased reports on their usefulness (or otherwise).

Would anyone who has used any of these packages with an AR-5000 care to comment on their findings?

TIA - Dave G3NGK

<snip> lots of good discussion

I'm surprised no one has mentioned chucking the ground rod into a heavy duty drill and "drilling it in." I can't remember the diameter of my ground rod. Would a typical ground rod fit in a 1/2" drill? I haven't tried this (pounded mine in with a sledge - very awkward), but have recently heard it somewhere.

>A trench 2 feet 6 inches deep is all that is required and will meet the NEC
>requirements.

You have to ask yourself, what's the objective here? Do you want a good
RF and lightning ground, or are you merely wanting to meet NEC minimums?
The two are *definitely* not the same thing. The Code minimum ground is
not a sufficient lightning protective ground, and it makes a poor RF ground
as well. Remember, the Code specifies the *least* you can do to be legal.
It is not describing what you need to do to achieve adequate protection of
electronic equipment, or good RF performance.

Bill is correct that disturbed soil can take years to return to its native
compacted state. Water, and a power tamper, can speed the process.
He's wrong about "the deeper the better", however. That's a common
myth. Very deep grounds are very little better than shallow grounds for
RF and lightning.

That's because of *skin effect*. RF (and lightning is RF) won't penetrate
past a couple of skin depths, so it is useless to go deeper. The key parameter
for good RF grounding is *capacitance to Earth*. You want to maximize it.
And you want to provide a good path to allow the currents to spread out
across the Earth. You can do both with a large Ufer ground or buried radial
field.

For adequate DC continuity in winter, you need contact below the frost line.
That's generally less than 2 feet in the lower 48. The Code 2 foot 6 inches

gives you a bit of safety margin. But you need *lots* more contact area
than the Code minimum requires in order to get an adequate RF ground.
You're forming a capacitor plate, with the Earth being the other plate,
and the reactance of that capacitor has to be low down to below 2 MHz
where the bulk of lightning energy resides. That means it has to be *big*.

It also has to be big to distribute the surge energy across the Earth
so that current densities don't become so high at any given point that
arcing between soil grains is forced to be the main conduction mechanism.
That "spikes" your ground, and anything connected to it. That's a good
way to trash solid state equipment. To avoid that, you need to spread
the surge over at least 400 square feet of the Earth's surface (more
is better). A 20x20 Ufer slab will do that, or an adequately dense radial
field will do that. Depth plays very little role.

If you also want to protect the site from Earth current surges, you can
use a ground ring around the entire site. This should be a minimum
2/0 copper cable buried 2' 6" below grade, and run around the entire
premises. This forms a 2 dimensional quasi-Faraday cage around
your premises.

I've also seen numerous mentions of the use of copper water pipe
in lieu of ground rods in this thread (and recomendations to pour
salt solutions down them). Copper pipe can corrode away rather
quickly in some soil types due to electrolytic corrosion (and salts
make that worse). If you expect to carry currents, you need solid
conductors so that there will be something left 10 or 20 years down
the road.

And you should also keep in mind that lightning surge runs about
18,000 amperes, so you want conductors which can safely dissipate
the heat produced by strike currents. More conductor mass is a
definite plus for buried conductors (wires in air can dissipate heat
rapidly to the air by convection and don't need to be as heavy as buried
conductors insulated by soil).

But remember that Code considers a ground rod (a made electrode)
to be the ground of last resort. It is the poorest of the various grounding
methods allowed by the Code. Use something better if at all possible.
A Ufer mat, a buried radial field, a ground ring, underground metallic
water piping, etc are all better than a made electrode. (And will enjoy
much lower current densities and spot heating than will a rod.)

And, strike currents will generally be sufficient to melt solder by
resistance heating, so all your connections must be mechanically
clamped (with an approved clamp) or cadwelded. No soldered joints
should be used in your ground system. (Code says this, but it bears
repeating. You *do not* want your ground open circuiting during a
strike event.)

You shouldn't solder *and* clamp either. That naively sounds like a
good belt and suspenders idea, but it isn't. The problem is that when

you test the ground, you can't tell how it will behave in a strike event *when the solder lets go*. You need to be able to measure the clamp resistance during testing. And when you test, you need to perform a dynamic impedance test, not just a simple DC continuity test. Code says you pass if the impedance is less than 25 ohms, but that's a legal minimum requirement, you want the impedance to be much lower than that at the frequencies of interest.

It's an Automatic Level Control - and I've seen them advertised in
PopComm, I think. Can't guess what the price is but they're supposed to
work...

Some assembly required.
Batteries not included.
Void where prohibited.

Message-ID: <6paoda$715@hacgate2.hac.com>
Source record: 151152
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Yes, yes, I know I was going to release it last week, but well, *stuff* happens, and I just haven't had a chance yet.

I also want to add another feature first - import and export of .apf files. This way PC895 users can swap frequencies amongst other enthusiasts as easily as those using the CE-232 or Opto systems. However I need a little help on something and maybe one of you .apf users can help me out. Here is a snippet from an .apf file I got:

```
,,151.8650,,D,, 151.8650 20th Century Hotel Las Vegas NV
,,463.8500,,D,, 468.8500 A&D K-9 Security
,,463.6000,,D,, 458.6000 A-Arrow Security
```

It's obvious what the filled in entries are, frequency,delay and description. I know the channel number should go in somewhere too. I have no idea what the others might be. Can someone fill in this info into the list I have below? Just replace <unknown> with what it should be:
.apf file layout:
<unknown>,<unknown>,frequency,<unknown>,Delay,<unknown>,Description

Thanks in advance for your help. Once I add this the program will be ready and I'll upload it to a site on Monday, 7/27/98.

I thought I was the only person who had problems with the audio levels from my scanners. This belief was the result of seeing NO posts on the groups about some receptions being Loud & Clear and others being "In the Mud". Nobody requested mods for this problem.

Some years ago I found a company that provided a Automatic Volume Control (AVC) or Automatic Level Control (ALC) circuit card. I bought several and have used them with my scanners and TVs (great for cable). They are small enough to mount inside a scanner but I have only used them in external speaker boxes.

These circuits are built around a NE577N IC (I think). AS I said it has been years and I have lost touch with the company.

Here is what I know;
Manufacturer = C & S Electronics
Model # = ALC225
(Info right off a circuit card)

After reading your post I did a short search of the web and found nothing on this company.

I don't know the Code in the US, but I would add one condition to the above. 2 feet is reasonable where there is snow cover in the more northerly climates. If the snow by the tower is removed or regularly walked on (compressed), the frost can penetrate further, since this removes the insulating properties of the snow. But just how far the frost penetrates in this case is very dependent on the local winter temperatures.

If you are looking for some frequencies then email me and i will mail
you back the resuts.

Can be frequency range, company, entire city or even an entire county.

Windows 95/NT - 32 bit extensions and a graphical shell for a 16 bit
patch to an 8 bit operating system originally coded for a 4 bit
microprocessor, written by a 2 bit company
that can't stand 1 bit of competition.

3412. How about a MOD to...

Put the LCD display on a leash. What I mean is, if I'm scanning in the car, I don't want to keep looking at the scanner to see which channel or frequency it's locked onto. If I could mount just the LCD on the dashboard, I could keep my eyes on the road. It would be good at the auto races also.

I don't need the full display, just the channel and frequency. Is this even possible?

Thanks,
Phil

> RF and lightning.

I didn't mean to imply "the deeper the better". I
thought I made it clear that the idea was to get
into the undisturbed substrate.

Trouble is, this can't be defined exactly. The
substrate on virgin prairie might be a foot deep.
In a new development, it might be 6-8 feet down.
There is no magic formula. So for the hobbyist,
who can't afford...and doesn't even know about a
soil analysis, his best bet remains to drive a
1" dia 10-ft copper water pipe as deep into the
ground as possible.

I agree with the rest of your post that implies
the substrate as one plate of the capacitor. But
since we don't know where the substrate is for a
hobbyist's situation, we have to deal in matter-of-
fact rules of thumb and skip a lot of the theory,
at the risk of being technically incorrect and
still get the job done, safely and properly.

In other words, one guy's conductor 10-ft into the
earth *might* have the lower 4-ft ineffectual. But
what do we know? The next guy might need all he can
get.....like those dudes in Florida.

Your comment about copper pipe is interesting, but
I don't find it to be too pertinent. I agree
wholeheartedly that one should not salt his ground!
Yes, that will take out even a solid rod by virtue of
the insulating layer of corrosion after a time.

Lemme tell you a little story.....this goes back many years to when we all believed salt enhanced a grounding system. I used to traipse out at night under the stars, and while gazing at and meditating upon the Cosmos, I'd urinate down steel conduit pipes that comprised a part of my grounding system. Hey, salt is salt, right? :-)

About three years later, I ran into a debunking of that salting myth....and tried to pull up those conduits. They pulled up, all right, totally eaten up. Whooooooey, was I ever a believer!

Anyway, I put in some 10-ft copper pipes in a location in 1975 and even today, they're still as good as the day they went down. I know, because the present owner recently pulled one up and used it in a plumbing patch. It was green with normal copper oxide, but still very solid and bulk intact.

Your talk of "skin effect" and call for ground rods is kind of in contrast. 5/8" ground rods have MUCH more skin effect than a 1" copper water pipe.....and the water pipe has about twice the surface area as the rod. The rod would have about 4 times the contact resistance to ground as the pipe. If you're talking less than an ohm, it might be moot.

But you and I both know less than an ohm to the substrate is an ideal more than a realizable goal. So I dunno..... your "hard cold facts" are pretty much okay, I guess, but there are a lot of if's, and's, or's, and but's, that kind of don't fit the hobbyist.

This is to suggest there are meaningful differences between a professional grounding system and a hobbyist's, and yet both can be (or might not be) effective. Depends.

Here's a case for ya. Most professional grounds for 2-way antennas atop moderate towers use a solid #6 copper for the down bus. Well, solid #6 copper is expensive; hard to find by the hobbyist; and rarely on surplus. But 1/4" copper tubing is cheaper and more readily available and will accomplish the same thing (or BETTER) for the hobbyist. Why?

Because 1/4" copper tubing has a greater surface area than solid #6 copper; therefore less skin effect; AND lower inductance along

its length.

So if a hobbyist uses copper tubing, he's
defied all "code", but if there are no kinks,
pinches, and sharp bends, he may well be a lot
better off than "code" and textbook theory.

See what I mean?

BTW....I agree wholeheartedly with your no-soldering
theory. Years ago, I used to solder my down buses
to the ground pipes. One morning after a heavy
thunder storm that night, I boogied out to have
a look and saw several of the straps swaying in the
breeze.... Apparently a strike has blown then apart.
I assumed that, anyway, and from then on, I used
mechanical clamps and cadwelds.

Hi

Why not install an "earth mat" on a horizontal plane, these are used in
some difficult sites, including telcos and radio towers, as long as you
have the same amount of copper or more so as to increase the surface
area, it is still in touch with the "ground" persae, and you could use
earth enhancing gel, I just forget what the non techo name for it is

3422. Re: Cellular Mod for PRO-64 !

Newsgroup: rec.radio.scanner
Date: 1998-07-24 00:00:00 UTC
From: cdeviney@ipa.net
Message-ID: <35b7e89c.2624281@news2.ipa.net>
Source record: 151184

More notes from the anonymous donor:

==========

As far as the "CELL A", there are two systems, Cell A and Cell B. One is "A" non-wireline (Cellular ONE) and one is "B" wireline (ALLTEL). You will have two competing cell carriers in your market as well. Cell "A" outputs are between 869.04-879.0 or so, Cell "B" between 880.4-890. 890-894 are extended frequencies, the lower half for Cell A, the upper for Cell B.

==========

VD is a scanner term for "Virtual Downconverter". There have been numerous write-ups in Monitoring Times on this technology, and there was a company that called themselves "The Cellular Security Group" that advertised this method. They have since gone out (driven out) of business. Since 1994, many scanners have the actual cell frequencies blocked from their EEPROM, and it is impossible to tune those frequencies on those scanners. Cell images were everywhere, though, and you could tune cell images to listen to cell conversations. I used to look for those frequencies by doing the following calculation:

Desired Cell frequency + (2 X 1st IF frequency) = Display frequency

or

Desired Cell frequency - (2 X 1st IF frequency) = Display frequency

one of the two would usually work. For example, some dual conversion scanners have an IF of 10.7:

870 Mhz + (2 X 10.7) = display frequency

870 Mhz + 21.4 = 891.4 Mhz
894 Mhz + 21.4 = 915.4 Mhz

So, to hear cell, you would hear the image from 891.4 to 915.4 Mhz, and you would scan those ranges! Since the scanners are blocked up to 894, you would miss the lower few MHz of the cell band.
Virtual downconversion "fools" the radio by swapping frequency bands. For example, one scanner I have will receive cell from 157.435-161.600 MHz. It is somewhat complicated, but it has to do with a VCO (variable carrier oscillator) and different frequencies that are used to "beat" against that VCO signal.

The way the mod on the PRO-64 works (I think) is that
1) cell images are heard in the VHF-Lo (48-54 Mhz) band.

2)The PRO 64 has bandpass filters for each frequency band,
VHF-Lo/Air/VHF-Hi/UHF/800.
3)Bandpass filters, when activated, will selectively pass/amplify only
the band they are intended to pass.

The mod ACTIVATES the 800 Mhz Bandpass filter when one is seeing
VHF-Lo on the display. This selectively passes/amplifies the 800 Mhz
images. Since the VHF-Lo bandpass filter is off in this situation,
one hears ONLY the 800 Mhz images.

In the purest sense, I do NOT believe that this a "TRUE" virtual
downconverter circuit. The effect is the same, though.

BTW, I think this mod blindsided Radio Shack. I really don't think
they or the "powers that be" had a clue that this could be easily
done!
==========

A very BIG Thank You! to the person who came up with and decided to
share this mod...very educational, interesting, and informative.

CATHY

This is a commercially available tracking setup used for hunters to retrieve
their hunting dogs after a hunt. They operate in the 216-217MHz range.
These setups are not cheap. Some of the collars run close to $200 or more.
The reciever is around $400 or more and only covers around 4 to 8 channels
(a different frequency for each dog) and only consists of a 200 MHz receiver
with an s-meter and a small beam antenna. If you want a URL to look at
them, try searching for "tracking collars" or "dog tracking collars". You
could probably looking under hunting accessories also. If you really care,
let me know and I will find you some brand names and phone numbers.

You might think I'm crazy, but I'm sure I have seen somewhere, someplace, an advertisement for a small 3-pin unit that you can install inside a scanner that allows you to set your volume to be at a constant level at all times. I guess you take the audio input to the scanner's volume potentiometer, feed it to this unit, then connect that pot to the unit and ground it, and it sets the "Absolute gain" At any rate, I want a few of these, my local Police Department dispatcher has a tendancy to REALLY MUMBLE starting about midnight... so I turn it up and then blast my eardrums out and wake everyone up when a mobile unit responds...

So if you have any idea what these are called, who makes them, where to get em cheap, or even a small circuit that I could build that would do the same thing, please email me!!!

bigdiq @ hotmail . com

Andrew -

It's not a problem in the trunking system - if you put the scanner
into regular scanning mode and scan the trunking channels you will
hear the female dispatchers with no dropouts. The other fellow in town
who noticed this is a professional two-way technician, and I'm a
broadcast engineer with some commercial two-way service experience,
and we know it's not a system problem - it's the "smart squelch" that
the scanner uses in tracking mode that is at fault.

>By the way, I have noticed this effect on my Sony spread spectrum cordless

I'm not too sure what you mean by "weak." If you are referring to
volume however, I've noticed that some systems are just naturally
"quieter" than others. Here in the Atlanta area, Gwinnett County
operates a rather large multi-site county system that is at obviously
lower volume levels than some of the other systems around town. The
Cobb County system is blasting compared to it, sometimes chopping out
the audio on my trunktrackers. Hope that gives you some comparisons.

I need to find the frequencies for Burke County,NC especially the town of Valdese. My dad talked to one of the officers and he said they had switched to a private carrier. What is that?

Thank you.

Sure is! The incision isn't more than a couple of inches. The
thin (bare wire) antenna is pushed along under the skin.
Kinda creepy but we are getting useful info from the study.
I have a digital camera in the shop if anyone is geeky enough
to want a picture of the Tx or Rx. :-)

> On a side note, I saw a 5 foot Indigo cruising through my hedges last
> week! Tried to get it, but I was a little too slow.

That's a nice size. Becky (5' tall redhead, braver than most men...),
is one of our top snake catchers. She brought a 6'+ indigo into
the office a couple of months ago. This was a BIG snake.
All was fine until the snake "hissed" loudly from being handled
too long. A few of us stayed, the rest left in all directions
(through walls and over partitions!). Her co-workers now know
to beat feet when she enters the office with a pillow case that's
moving!

For those that are curious, this is where the animal tracking
is taking place...

3432. FS: Pro-60 Scanner / Access

Newsgroup: rec.radio.scanner
Date: 1998-07-24 00:00:00 UTC
From: rbatina@infinet.com
Message-ID: <SVSt1.192$q5.4535338@news2>
Source record: 151194
Cross-posted to: rec.radio.scanner,rec.radio.swap

For Sale ($160 shipped):

Radio Shack Pro-60 / 200 Channel / 900mhz / Handheld Scanner & Accessories

Comes complete in it's original box, with instructions, NiCad battery pack, charger/stand, AA battery adaptor, antenna, AC adapter, and charger instructions. A complete kit for AA battery, NiCad, or AC outlet usage.

Features:
200 Channels in 10 banks of 20 frequencies
Triple Conversion to reduce interference
AM/FM/WFM Modes with override feature (Allows you to listen to FM 88-108!)
NiCad Charging Circuit - recharge the batter while inside the scanner

Coverage:
30-512 mhz - with NO GAPS!
760-824 mhz
849-865.9875 mhz
866-869 mhz
894-999.9875 mhz

This scanner covers more than a lot of other scanners, most notably being it's ability to receive the FM Television audio channels as well as the 'regular' broadcast FM stations that you can hear on your car or home stereos. This is a nice feature when the scanning gets a little dull and you just wanna listen to some tunes. :)

The Pro-60 also allows you to listen to: VHF Low, 6 Meter Radio, FM TV, Land Mobile Service, FM Radio, Aircraft Band, US Government, 2 Meter, VHF High, VHF Wide, 1.25 Meter Radio, Military Aircraft, UHF Low, UHF Wide, UHF T Band, Conventional Systems, Conventional/Trunked, Public Safety, Trunked. All of that info is taken directly from the instructions.

So, this will get pretty much any fire, police, highway patrol, auto racing radios, business radio, government/public aircraft, amateur/ham radio, family radio service, sherrif, DOT/city vehicles, cordless phone, baby monitor, fm radio, tv radio stations that you want to get.

All of it is in nearly new condition, and I'm sure you will be very happy with it once you receive it. All for only $160 shipped via Priority Mail.

Thanks

Here is a scanned and OCRed manual.

Operation

The BC 200XLT has 200 memory each of which can be programmed to store one frequency. The channels are divided into 10 - 20 channel banks, useful for storing similar frequencies in order to maintain faster scanning cycles. When scan is pressed, each of the programmed frequencies within a selected bank will be sampled for a transmission (locked channels will be skipped) at the rate of about 15 channels per second. If an active frequency is found the unit will stop and monitor that frequency until there is no longer any activity. A two second delay can be added to each channel and will allow the unit to monitor the frequency for a return or continued transmission. If, after two seconds, the frequency remains inactive, the scanning cycle will resume.

When the unit is first turned on, each channel will contain "000.000". When new frequencies are programmed, the old will be erased. If an invalid frequency is entered, "Error" will be displayed and the old frequency will return.

To operate the scanner make sure that the batteries are charged or power is correctly connected to the unit. Turn the volume control on and adjust the desired level. Adjust the squelch by turning the knob fully clockwise until a rushing sound is heard. Turn the knob back until the receiver is silent After the channels have boon programmed, operation is simple. Press the scan key to scan all the channels While the receiver is scanning channels pressing one of the number keys will turn a bank of 20 channels on or off. The black lines at the top of the LCD display show you which banks are selected. If a bank is already selected (shown by a black line under the bank number) pressing the corresponding button will deselect that bank Press the manual key to stop scanning. Repeatedly pressing the manual key will step through the channels in order. -

LCD Display

The BC 200XLT has a backlit display which shows the current channel and frequency as well as other operational modes. When the unit is scanning, the channel number will rapidly advance while the frequency display will go blank. When the scanner is stopped the current channel and fre-quency will again be displayed. When frequencies are programmed the display will show the digits as they are entered. The display win also shred "PRI" when the priority mode is on, "L/O" when-ever a channel appears that has been locked out, and "DLY"

whenever a channel has been pro-grammed for delay. Across the top of the display a series of dashes under the numbers 1-10 will be present. These are the bank indicator numbers. These are selected or deselected during the scan sequence by the use of the numeric pad.

Programming

To program a frequency into a channel, press the digits of that frequency including the decimal point and then, press the enter key. If an invalid fre-quency is entered, the display will show "Error". To change a frequency enter the new one and the old one will be erased.

To program 162.550 into channel 2: Press 2MAN Press 162.550E

To program 471.2375 into channel 7: Press 7MAN Press 471.2375E

Multiple Entries - When you press the E" key to enter the same frequency in a different channel the LCD will show the channel number of the current frequency "Ch 45". If you want to repeat that frequency in the new channel press the "E" key again. That frequency will now be programmed in both channels. You can repeat a frequency as many times as desired.

Features

The following b a brief description of the opera-tional features of the BC 200XLT.

Manual Channel Selection - To manually select a channel press the manual key repeatedly until the desired channel Rumba appears in the display. If you have deselected any of the banks h will be impossible to access any of those chancels manually until you have selected the particular bank in which your channel exists. Press and hold the manual key to rapidly step through the channels.

or

Press the channel number you wish to access, then press the manual key. The scanner will automatically advance to the desired channel regardless of the bank status.

Lockout - Select the channel to be skipped. Press the lockout key. The lockout indicator win appear in the display whenever that chanted also appears. To take lockout off press the lockout key on that channel. Note: If priority is selected, channel 1 will not be able to be locked out. All other priority chanced may be locked out.

Priority - When it is important to keep track of the activity on one frequency white listening to others, the priority function should be used. Program the important frequency into the first chanted of any bank. Press the priority key to activate the priority function. Every 2 seconds the unit will check the first channel of all selected banks for activity (the priority indicator will appear in the display). If a transmission is found the unit will monitor that channel. If no signal

is found, the unit will return to the previous channel and function. Press the priority key again to turn off the priority function.

Search - Use the search mode to look for new active frequencies within the bands of your scanner.

Enter the lower limit frequency on the keypad and press the limit key;

Enter the higher limit frequency and press the limit key again;

These two frequencies set the range that the Unit will search. Press the search key to start searching. If an active frequency is found the scanner stop to monitor the signal. Press the hold key to hold the search on the frequency. Press the hold key again to step up to the next frequency or press the limit key to step down to the previous frequency. If you press and hold down either the Hold or Limit keys, you will rapidly step through the search fre-quencies. (Step up with the Hold key, and step down with the Limit key.) When the signal stops or if you press the search key, the unit will continue search-ing. Press the manual key to leave the search mode.

Low Battery Indicator The BC 200XLT has a low battery indicator to let you know when your battery needs to be re-charged. When the BATT indicator on the LCD display starts to blink, it means that the battery pack needs to be charged. After the low battery in-dicator has been blinking for about ten minutes, the scanner will shut itself off to prevent the batteries from becoming completely discharged. See the section of this manual on Battery Maintenance for more information.

I use one on a patrol car with a BC760XLT scanner. VHF Hi-Band coverage is great with reception of our VHF repeaters for 20+ miles. Higher freqs in UHF + 800-band are not so hot on that antenna because of its length...much shorter range. My car already looks like a porcupine and the glass mount was the best way to go to add the 2nd scanner. If your target band is high freq you will be better off using an antenna designed for that band...like a cell phone antenna.

>I believe at one time, before we gave
>it away, it was against the vehicle code to use radar by the state
>police...Anyone know this angle?

It was never illegal for the CHP to use radar. The history is that for years, Assemblyman Lou Pappan from Milbrae(?) was head of the committee that oversaw budget to the CHP. He was also known as "lead-foot Lou" and made no secret of the fact that he was against CHP using radar on the freeway. So, he withheld any state funding for radar, year after year. CHP got around that toward the end of the 80's by using federal grant money to buy radar, and also by having counties donate units. The new units are Ka band and have front and rear antennas to detect speeders either direction. Section 40800 of the California Vehicle Code covers the use of radar by police in Calif.

> I dont bother wasting my time reading the macky threads, so can someone please
> tell me who this guy is and why all the hooplah concerning him!!!

Why, he's a pig farmer!

It's true!!!

But he's had a rough go of it.

Yes indeedy.

See...he couldn't get his pigs to breed.

So he went into town and asked how to get his pigs
to have piggies.

Well everyone knew Mackey and they just led him to
believe that if he porked his pigs himself, he'd
have all the piggies he needed.

"Really?" Mackey asked
"Sure!" they said.
"But how will I know it worked?" Mackey asked?
"er..uh..the pigs will...uh....lie down in the
morning. yeah. that's it."
"Cool." he said.
"Glad to help." they said.

So off he goes. But he ain't romancing his pigs
in the farm-yard. Noooooo. That wouldn't be
proper.

So he gets up at dawn and loads the pigs into his
pick-up truck and carries 'em out to a secluded
clearing. He spends the next half hour porking
his pigs. He loads 'em back up in the truck and
carries 'em back on home.

Next morning, Mackey gets up and sees the pigs
rootin' around on all fours just like they always
do. So Mackey loads 'em back up in the truck and
heads for lover's clearing.

Next morning, no different. Back to the clearing
he goes.

By the fourth morning, Mackey's whipped. Can't get out of bed. His neighbor stops by and sees Mackey all spent and sprawled out on the bed.

"Do me a favor Clem." Mackey croaks.
"What's that?" Clem asks.
"Looky out the winder and tell me what them pigs are doing."

Clem steps over to the window for a peek.

"Well you might as well get up Mackey" Clem said.
"They ain't layin' down?!?!?" Mackey asks.
"Hell no, they're all in your truck and one of 'em is blowing the horn."

hehe

Dale,

Yes this problem is known and new radio's will have a fix
incorporated. The problem is noise/distortion getting into the
sub-audible freq range and causing the radio to false on the noise
instead of the disconnect sequence. The noise actually duplicates the
sequence and the radio can't distinguish the real sequence from the
noise generated sequence.

New radios (sorry, I don't have the release date or serial number
threshold) will allow you to select between two versions of squelch by
pressing the SVC key. You can choose between the current sub-audible
squelch method or a conventional squelch where the squelch knob
determines the threshold and the radio looks at signal strength.

I've tested this version of the radio and it works quite well. You
will notice a slight squelch tail when using the conventional squelch
but it's not objectionable.

I am looking for a program '801SCAN.EXE' or '801HF.EXE' or other
similar program for use with ICOM CT-17. Thank you for your help.

S.V.Muttypharg

Ok!

I got the answer from several friendly people... In case anyone else wanted to know, its:

The ALC245M Automatic Volume Controller will keep your transceiver or scanner's volume constant from a whisper to a scream. $22.95 S&H $5. Other models also available. FREE BROCHURE. C&S Electronics, P.O. Box 2142, Norwalk, CT 06852-2142. Phone: 203-866-3208 Fax: 203-854-5036. E-mail: CANDSELECT@worldnet.att.net

Thanks to those who responded!

I thought since no one has entered this message sction I would - and with some
frequencies of Houston local scanner freqs:
helicopter/traffic/weather - 450.500 mhz
civil defense/houston - 155.265 mhz
triple A - 452.525 mhz
weather - 162.400 mhz
police/pasadena - 453.800 mhz
houston traffic control - 450.550 mhz
houston fire search & rescue - 155.160 mhz
texas medical center - 155.580 mhz
houston ambilatory service - 460.550 mhz
houston ch.13 tv audio feed - 215.750 mhz
houston Int. Air (Bush Inter. Air) - 118.100 mhz
railroad - 160.530 mhz
here are a dozen - have more but thought this was a good number to start with.
hope you enjoy! Message back with and for further info! Bye!

Are you trying to say that I went to Bill's house & sat at his computer
& wrote 99% of Bill's posts? THAT is about the only way I could be
responsible for Bill's posts.

Source record: 151218

I just got a new Uniden BC235xlt. I am trying to get the police and fire in my area, I live just outside Akron, Ohio. I have all of the numbers for the police and fire, but when I put them in the trunk part so that I can listen to them, I get an error. The numbers are 806.3875, 807.5125, 808.5875, 809.5875, 810.5875. Are these trunked numbers?

I also have another set of numbers for them 851.3875, 852.5125, 853.5875, 854.5875, 855.5875. I can get these numbers in and scan them, but one of them always make the scan stop on it for about 1 or 2 secs. with just a noise, no talking. It is a different number today then it was yesterday, any thoughs?

Please reply to email at cyrus4109@usa.net

Thanks for the help!

I know the police use the 453 MHz band. For example the 2nd, 7th, 8th and 15th (Northeast) Districts are on 453.95 if my memory serves correctly.

I think the Fire Department uses the 152 MHz band.

Email me back for an extremely detailed listing.

Windows 95/NT - 32 bit extensions and a graphical shell for a 16 bit
patch to an 8 bit operating system originally coded for a 4 bit
microprocessor, written by a 2 bit company
that can't stand 1 bit of competition.

Stainless steel hose clamps work fine to secure the ground wire to the copper pipe.
You have to use the worm type and not the one with the screw in the center as most of them are steel and corrode do not apply uniform pressure on the connection.

I know of several people who all use stainless steel clamps for securing the ground wire the wire to the copper pipe and two of them work for the power company doing the high voltage power transformer lines.
They have never had any problems with the use of them .

They do not come loose like ubolt clamps do from vibration, they do not corrode like steel ubolts do.

I have a 55 foot tower and use the same setup and have never had any problems with lighting , even took a direct hit by a large staticdischarge and had no damage to the radio's or the tower.

You have to remember we are dealing with rf and static grounds, if we were working with the electrical box the grounding setup would be completely different .

It's a fairly good mobile radio and would work well as a cheap base with an AC adapter. One seller at a recent hamfest had at least 6 of them new in the box for $100 each. I've seen several used ones selling for under $100. Personally, I'd pass it up and buy a Bearcat Trunktracker base or mobile unit for around $200 new
.

Use this link to listen to Southeast Arizona Public Services!

http://www.dice.net/radio/stations/467BB4D1.rdl this link will change from time to time

You probably don't have the plug-in so go here 1st and download and setup the program http://www.dice.net/radio/download/rd32inst.exe for the 95 version and http://www.dice.net/radio/download/rd_inst.exe for the Win3.1 version . Served by Radio Destiny on a DSL 256k link to the net with speeds upto 7m on light traffic periods. You will be listening to Arizona Department of Public Safety (DPS- Highway patrol) Pima County Sheriffs Dept., Tucson City Fire and Police and various other State, Local and Federal government agencies operating in southeast Arizona. This weeks Highlight is the Border Patrol. The set-up includes a PRO 2006 Scanner with a OPTOELECTRONICS OS456 computer interface. The computer interface is controlled by SCAN*STAR ver 6.43. This set up is new and will be updated soon with a much faster computer but the Internet connection will support about 10 listeners on a Win95 machine.

THIS IS A TEST and I hope to make it a permanent fixture on the net.

Let me know what you think. Don't worry a page will soon follow

Let me know what you think at kf4ndq@qsl.net enjoy!!!

I could careless if you are 15 or 50, the fact remains that just about
every post from you is condescending, a flame, or just plain WRONG.
I'm sorry if you think that you can post any old opinion you have at
the time as fact and expect everyone to accept it as the gospel.

The beauty of the usenet is that when you put your opinion out there
in internet land, anyone and everyone will wipe the snot right off
your face if you are wrong, but I can see by deja that you know this
all too well. So have a nice day, and use the net to learn something
sometime. Good luck!

P.S. With an attitude like yours, I doubt that you know more about
ANYTHING then ANYONE..except mackey..maybe..haha

I've been using mine for over a year now and it works just fine. I've noticed a lot better reception than with the duck. An informal test around Camp Blanding, FL last year proved this out. I had no problem picking up UHF broadcasts from 20 miles or more away. If you really want to get it off, acetone (nail polish remover) might do the trick.

Reminds me of my college days.... 8' x 10' dorm rooms, but every one of these kids HAD to have a cordless phone. Now this was back in the days of only 10 channels in 46 - 49 mhz and no 900 mhz. with channels 1-10 programmed into a scanner, I never found a single time that I could scan more than 2 channels without picking up a conversation. The ones that I really loved and heard more than once:

Johnny: Oh Susie, baby baby, you're the only one for me. <beep>
Hang on, I have another call (call waiting).
....
Johnny: Oh Lisa, baby baby, you're the only one for me.

That means one of two things, then.
Either you aren't a flamer, or he
doesn't acknowledge you, period.

If there is any doubt, ask 'im. <g>

But be respectful, whatever you do.
Address him as one of the following:

Doctor Mackey....(Veterinarian)
Sister Mackey....(Nun)
Cowboy Mackey....(Gay Caballero)
Farmer Mackey....(Pig Breeder)
Sucker Champ Mackey....(Contest Winner)

Any of the above will keep from introducing
an artificial bias in his response.

3509. GROUNDING THANKS!!!!!!!!

Newsgroup: rec.radio.scanner
Date: 1998-07-25 00:00:00 UTC
From: Mr_Hankey@my-dejanews.com
Message-ID: <6pbr94$p27$1@nnrp1.dejanews.com>
Source record: 151037
Cross-posted to: alt.engineering.electrical,rec.radio.scanner,rec.radio.amateur.antenna,misc.consumers.house

I received a GARGANTUAN response to my question about how to put a grounding rod in, a response unlike any in over 2 years of Usenet posting!!!!

Many of you even wrote back having noticed this response and hadn't seen anything quite like it either!

Anyhoo....I tried to respond to many of you, but can't get to all, as the responses *continue* to filter in! I've gotten so many great ideas, that I even think I'll be incorportating a few of them together!

I want to make sure all of you know how much your time is appreciated. The amount of responses, as I've said, just blew me away. There's a lot of fans of hobbies that require grounding like myself, and the challenge that it's presented me will be made that much easier now, I'm convinced! And that's thanks to all of you, thank you, thank you, thank you!!!!!

As far as WHAT EXACTLY I'm going to do, well...I obviously have to make some decisions, and that's all I can say at this point! How would YOU feel if 5 dozen people responded?!?!?!? ;>

Thanks again so much to all...I've read each and every response. (Decisions, Decisions, Decisions!!!!) :>

> safe ground? Its not much of an issue for me now, since after this
> thread I've updated my ground rods, but a good question anyway.

Yes, it is a good question, and the answer
is not clear. A lot depends on the quality
of that water, its pH, and its chemical makeup.

If the water is excessively acidic or alkaline,
then it will induce corrosion on most anything.
Likewise, many chemicals will rapidly create an
insulating layer around a buried conductor.
Electrolysis might also be a problem.

Some chemicals can enhance the ground contact.
Copper sulfate is an obvious one, but rarely
found in ground water. I'm not familiar with
many others that can help a ground, but calcium,
sodium, and metallic compounds might.

I think you should keep an eye on it over
several years. Don't be afraid to pull up
a ground rod/pipe and check it, say every
3-6 months. Copper pipe is cheap enough that
you can replace it yearly, if need be.

I agree totally with your observation. As far as getting that thing off your window, you should be able to just grab it at the base and pull it off. You'll have to peel in one direction. Then you'll need to take a razor blade to clean off the excess rubber gasket.

Your statement reminds me of how some female rape victims are
accused of being the cause of their own rape simply because of their
looks or hair style or clothes.

WRONG!

Every one of the people on this NG who have participated in the
flame fest carries THEIR OWN responsibility & burden. They are in
control of their own computers & the messages they chose to, or not to,
respond.

Face it, if you get a speeding ticket, the judge isn't going to revoke
your
guilt simply because your car was capable of speeding. The choice to
speed is the choice of the driver.

Same thing here. A person's choice to participate in flaming is
exactly that, the choice they made. It is no one else's responsibility
or guilt.

Ohh Billy boy , you kkep making us laff...yes us....!! There is an US...4 to be exact!

Now here is how we Spoofed the news posts ok ready our lil willing and able Newbie!

1. Obtain 2 - 5 WINGATE's (open)

2. Dial up the ISP

3.Telnet into Unix Shell

4. Telnet to abother Unix shell

5. Telnet to yet another Unix Shell

6. Telnet yet to another shell , SUNos this time tho Bill..ya follow ?

Ok now armed with the mega BOUNCES....you cannot be traced...what we did Ol Butt Cheek was this!

With the WINGATE servers we found while Hunting the net , the OPEN ones gave us access to thier mail servers...and yes...news servers....So our lil Newbie...ya follow so far ?

Now once ya telnet from one shell to another (legal...never was ilegal) you wipe the tracks !...easy huh...you and Mackey should do this...Better yet Butt Boy use this method to have even MORE Faithful Butt Cheek Followers by creating more bogus ID's!

Now , all you got was the OPEN WINGATE we used to Bounce the news feed from...hehe...so keep those cards and letter comming!

abuse@whatever.com.....One day you may just email us...FUCK that would be funny

Root@home.ml.org...(not a real IP Addey)...and then the laffter gets larger!

Bill get Unix For Dummies...might help ya!

As for your LAME web site....Shh dont tell ok...But it (as all web sites do) sits on PORT 80..now if youve been to www.rootsheel.com , you have seen the webkill.c

Here we go Ole Butt Boy!

cc webkill.c -o Web

Now we have a web Expolit!...ya follow Butt Boy ?

Now fer any system..your too...

Seeing as dont use any MS product , merely ripped it apart...MS Winblows 95/98/NT has all BUGS in it...But where.. ?

hehe....READ up on that 1 ole Billy boy , cant count the times we have been into a system....as for telling you this...well shit as the dog may!....who gives a fuck when your the ' The Best ' :)

As for our spelling....who gives a fuck....often a byte gets lost in our mega Bounces anyways....

CPU fry...well that will take a bit..see the Pentium CPU cant handle Floating point intergers over " X "...Acid Angel wrote a Brilliant program that makes all look ok on your screen....however it is causing tyhe CPU to over calc the math...hence a CPU burn, ahh yes...nice way to get rid of frauds like you Holmes!

Now all we do ..(in time) is PLANT this lil expliot in yer system...when you said..well FUCK bill....We gave you Great info here...cant expect us to reveal all now can ya!

Last words Bill Boy!

You way the fuck out of your expertise here !

And for Mackey , hey doode...keep flinging that shit at ole Butt Cheek!

Love your Posts Mackey...off topic or not...!

& yes....THIS IS NOT A THREAT BILL..mearly a lesson in hack 101.. :)

have an avergae day our lil newbie!

I have a pair (two) of pewter gray Motorola Talkabout FRS radios for sale. They are both "NEW" in their boxes and come with manual, warranty registration and belt clip. NEVER USED!!! $200.00 and I'll ship to the 48 states. These won't last long at this price. These radios retail for $149.95 + TAX, per radio.

No...
For anyone with a Radio Trash Pro-2041, I have verified the
discriminator tap point. You can tap the IC, <3361> or use TP5, which
runs straight of pin 9, which is the baseband audio pin.
It took me forever to get this right... hope this helps someone.

Better yet, if you can locate one...
I have used an "electric spade" with great success in the rocky red clay of centeral VA. The unit is kinda like a light duty jackhammer. Simply remove the spade/shovel from the business end, set the unit on the ground rod (rod typically is slightly smaller o.d. than the spade shank), and have at it. In a few minutes of almost effortless time, the rod is in.

This technique will work best with copper clad steel rods. Also, it is a good idea to occasionally lift the spade unit to be sure rod end peening is not going to capture the rod in the spade socket. ...I have not had this problem - In fact, had much less mushrooming than with a sledge hammer... Just a good idea to keep you from having an electric spade lawn ornament :).

>
>Wiggie

Just got a 3000 about a month ago... actually bought 2 of em.
Great scanner so far... scans really fast... has all the freqs (less
cellular... anyone have a cellular mod?) that you would want. Not
alot of birdie freqs. I myself like the large "brick" size of it.
The Icoms and other radio's I've looked at seemed to small for me.
I've got big hands so maybe that's why (heh). All and all a great
radio, worth the money. Would like to see a TRUNK-TRACKER
version of it someday... (Uniden, listening?)

If you get one, though, and you're going to use it handheld, recommend
you get an Austin Condor rubber duck antenna. Major improvement
over the stock Uniden duck antenna, and they're only about $20-30.

I also have the other one hooked up to a base scanner antenna on a
roof... works excellent. Signals don't overpower the radio at all.
Very good sensitivity on the radio... picks up like a champ.

Never heard of that PROgramit interface though, sounds interesting...

All and all, best scanner I used thus far... :)

3531. BVI freqs??

Newsgroup: rec.radio.scanner

3533. Re: Digital Comms via trunked control channel

Newsgroup: rec.radio.scanner
Date: 1998-07-25 00:00:00 UTC
From: D Stark <nf2g@ggw.org>
Message-ID: <6pcutv$ot6$1@node17.cwnet.frontiernet.net>
Source record: 151061

Rob K. wrote in message <35B8F682.EFC7BFCD@easynet.on.ca>...
>The control channel of a trunked system is a digital carrier containing data needed for the routing of trunked transmissions (in a nutshell). If the control channel is of a digital nature, and software like Etrunk and Trunker "decode" that control channel info, would using such software be technically illegal. Decoding digitally encryped data, like that carried over the control channel, is not legal is it?
>RK

Digital is not encryption. It's just a different way of sending the information. The statutes that prohibit decoding (not decryption) of digital cellular signals pertain to converting them to analog voice. There is no voice traffic carried on a trunking control signal, so even if those laws applied to anything besides cellular radio phones (which they don't), the control signal would not be covered.

From: Tim Tyler <ttyler@mich.com>
Message-ID: <35BA043A.86508890@mich.com>
Source record: 151063

On Friday they were using 141.850MHz AM (T-Birds 1-4, & 5/6 when in formation with 1-4), and 322.95MHz (AM) for T-Birds 5 & 6, who mostly are performing indepentely of the rest of the guys.

150.225MHz FM seemed to be a portable repeater for T-bird maintenance, and 413.025 was a T-bird ground ops channel.

Show Control is 128.70, with no UHF equivalent.

No Roaming Fees

We don't charge you for roaming when you use our cellular services, and we have one flat rate for long distance. No matter where you are you pay home market rates unless you dial long distance from that market.

As well, we offer direct connect, which is a 250 mile 2-way radio. It is just like your office intercom system but wireless.

To complete the package, we combine an alpha-numeric pager complete with voice-mail, text messaging, nationwide caller ID, and email capabilities. Any one can send an alpha page to your phone as long as they have access to a computer and the internet!

Sound Interesting? Email me at noroamingfees@yahoo.com for more details.

Drop by rec.radio.shortwave, lots of folks in the HF world know of them. Usually you can catch them at odd times on the hour around 6200-7000 Khz - mostly in USB but sometimes in AM and pretty strong at that. They are also known to be in other bands. Rumour has it that when the middle east or the former soviet union starts getting politically or militarily active, so do the numbers stations. If your using a wide band receiver drop the scanner antenna and go for a longwire instead, wavelengths are much longer down on HF.

Hello!
I am from up in Solon, the reason you can't hear Akron is because
Akron is Digital... this means that your scanner cannot decode its
transmissions. The Akron police and FD I believe are on this digital
system, and as of yet there are no scanners that will allow you to
listen. I'll email you some frequencies.

OK, with SO MANY people making SO MANY flames, how could I
have possibly gotten to all their computers to be responsible for
99%?

Really, with Cheek, YOU, Smalley, CB guy, allsafe, Ryan Faricy,
& the others, there is NO WAY I could have made 99% of their
posts.

Each individual must accept responsibility for thier actions, there
is no such thing as "he made me do it".

>Why not tell Bill Gates where HE can go today?!

You know, there once was a guy who wrote a computer operating system called CP/M or something like that. He was approached by a large computer company in order that he might mass produce it. Instead of going to the meeting, he decided to go hang gliding. So that company instead went to a young man who had developed an operating system in his basement. That young man was Bill Gates. He worked, made a decent product that a LOT of people like, and all of a sudden people want to tear him down. That's fine. They can first start by erasing all the Microsoft-related programs on their computers. Maybe perhaps they'd prefer to access the Internet from one of those better systems such as a Commodore C64 or an Adam.

> I don't need the full display, just the channel and frequency. Is this even
> possible?

Possible and feasible are two different things
sometimes, especially in this case. It's
basically not possible to get JUST channel
and frequency data.

It may be possible, albeit not too feasible,
to get a replacement LCD for your scanner; build
it into a box with an umbilical cable, and wire
it to a plug that goes into the scanner and
parallels off the built-in LCD.

You might have to turn the resident LCD off
in order to make the remote work...I dunno....
and cable length might be critical, too. Lotsa
potential pitfalls.....but.....maybe.

Then again, maybe not.

Like new BC-3000xlt with orig box, manual and all original accessories. This includes original wall wart charger / power supply and rubber duck. Price includes the optional heavy duty leather case, which sells for about $30.00 extra. Package price was $325.00. Reduced to $300.00 shipped CONUS. Email direct if interested.

3556. Pro-Turbo Windows Control Software for the CE/HB 232 interface

Newsgroup: rec.radio.scanner
Date: 1998-07-25 00:00:00 UTC
From: jabba@iaw.on.ca
Message-ID: <35b94e45.54460100@news.iaw.on.ca>
Source record: 151112

It's now HERE!!
Pro-Turbo
True 32bit Windows Software for the CE/HB 232 interface for
the Radio Shack Pro-2004, 2005, 2006 scanners. It does everything the
DOS program does, and more. The program uses very little resources,
so your system is still usable under Windows, in fact the author of
the program runs 2 copies of the program on his system with no problem
at all. Some of the most used scripts are now actually part of the
program, log a block of channels, search and store, auto-program lock
a block of channels. If you have added more memory to your scanner,
such as the 6,400 channels mod you can switch between the 16 groups
right from within the program with very little support circuitry.
Also with a few more components you can have an on screen
S-meter, you can even control the volume of the scanner if you have
it connected to your Sound blaster compatible sound card.
So if you would like to give it a try you can download the whole,
non-crippled program at http://www.iaw.on.ca/~jabba/pro-turbo.htm

Those are the repeater inputs - you want the repeater outputs which
are 45 MHz higher.

>I also have another set of numbers for them 851.3875, 852.5125, 853.5875,

Those are the repeater outputs, and you are describing the data
channel. Since it moves each day you have a Motorola system (the only
type that the 235 can track).

In order to trunk track you have to enter the frequencies while in
=tracking= mode. Hold the track button until you get a double beep and
both "track" and "bank" flash. Push the button for the bank you want
to use and then enter the frequencies again. After entering the freqs
push "scan" - the radio will find and lock onto the data channel and
start showing you the IDs for the comms you are hearing.

3563. FARMER MACKEY?

Newsgroup: rec.radio.scanner
Date: 1998-07-25 00:00:00 UTC
From: allsafe <allsafe@netwit.com>
Message-ID: <35B95CB6.4B02F5DC@netwit.com>
Source record: 151119

Mackey's a pig farmer, dont'ja know.

It's true!!!

But he's had a rough go of it.

Yes indeedy.

See...he couldn't get his pigs to breed.

So he went into town and asked how to get his pigs to have piggies.

Well everyone knew Mackey and they just led him to believe that if he porked his pigs himself, he'd have all the piggies he needed.

"Really?" Mackey asked
"Sure!" they said.
"But how will I know it worked?" Mackey asked?
"er..uh..the pigs will...uh....lie down in the morning. yeah. that's it."
"Cool." he said.
"Glad to help." they said.

So off he goes. But he ain't romancing his pigs in the farm-yard. Noooooo. That wouldn't be proper.

So he gets up at dawn and loads the pigs into his pick-up truck and carries 'em out to a secluded clearing. He spends the next half hour porking his pigs. He loads 'em back up in the truck and carries 'em back on home.

Next morning, Mackey gets up and sees the pigs rootin' around on all fours just like they always do. So Mackey loads 'em back up in the truck and heads for lover's clearing.

Next morning, no different. Back to the clearing he goes.

By the fourth morning, Mackey's whipped. Can't get out of bed. His neighbor stops by and sees Mackey all spent and sprawled out on the bed.

"Do me a favor Clem." Mackey croaks.
"What's that?" Clem asks.
"Looky out the winder and tell me what them pigs
are doing."

Clem steps over to the window for a peek.

"Well you might as well get up Mackey" Clem said.
"They ain't layin' down?!?!?" Mackey asks.
"Hell no, they're all in your truck and one of 'em
is blowing the horn."

hehe

One thing I've been wondering, I have ground water less then 5 feet
down here, If I dig a five foot deep hole, it will fill with
water...So if the ground rod is into this water, would I have a good
safe ground? Its not much of an issue for me now, since after this
thread I've updated my ground rods, but a good question anyway.

Can someone direct me to reviews of either or both of these radios?
I.E., the AOR 5000 (or 5000 + 3) or ICOM R8500?

Also, can someone comment - is the AOR 5000 (+3) better in terms of RF performance than something as small as the AOR 8200? It seems like it would have to be, but, I'd just like some confirmation of that.

Thanks,

AOR Spectrum Display Unit SDU-5000
$750 shipped UPS ground within the continental US

This unit is in mint condition and is the current production model compatible with the AOR AR-5000, as well as ICOM R-7000, 7100, and 8500 wide band receivers. Other receivers with 10.7MHz I/F may also be suitable for use with the SDU-5000. While earlier versions required a ROM change for use with ICOM receivers, this unit has both AR-5000 and ICOM command sets in the production ROM.

The following AOR web page describes the unit and give specifications:

http://www.aorja.com/sdu5000e.html

Money order for $750 - I will ship UPS ground within the continental US.

Note: I'll be unable to check this account for mail for just over a week. Please be patient.

Bob

3572. Has Mr. Mackey ever helped this newsgroup?

At the risk of inviting flame and other assorted spam, I pose the question: Has Mr. Mackay (and I hope I've spelled it right) ever helped a fellow scanner enthusiast solve a technical problem, provided needed frequencies for some purpose, or provided advice on equipment capabilities or use? I have read several posts over the years where Mr. Cheeks has provided such advice and I applaud him for providing it. Of course, one can always take exception to various aspects of that advice, but that is the risk inherent in any free advice. If Mr. Mackay has provided helpful advice, one can always take exception also. The key point is: If Mr. Mackay hasn't provided needed help but only causes disturbances, what good is he and why should he post any messages? The same goes for Mr. Cheeks, but at least I know he has provided help to a lot of people in this newsgroup. Art.

I know more than a few people that hold degrees, and I've never met a single one that wouldn't provide the information on request. YOU are THE exception, which makes me believe that you do NOT have any degrees. Maybe a G.E.D.??

What you miss is the fact that noone has any reason to DOUBT Bill - and noone has any reason to BELIEVE you.

Guys, I'm not going to Kentucky...

I really would like advise on mounting the darn thing nicely... I purchased a $50 glass mount antenna, and I'm gonna study the question pool for the technician ham license. This will probably cover me.

I want to install the thing as good as possible, and I need advise on the technical aspects of it. Are there any problems with interference in an auto I should know? Where to best mount the antenna, etc... I found out the hard way that if you loop extra cable together you tend to pick up strange stuff near the loop (kinda like it becomes an antenna). Not good if the loop is next to a fan motor.

Get the point?

If you have suggestions, do's & don'ts, good ideas, etc... Let me know...

No - you can't use stainless steel hose clamps, and still comply
with the NEC. If you use clamps, you must use only clamps listed
for the purpose.

Michigan law (MCL 750.508) states that it is illegal to "EQUIP" a motor vehicle with a scanner unless...

Being a ham operator is the most likely exception you might fall under.

The issue is the definition of "equip." A stand-alone handheld in the car shoudn't fit it, but an external antenna (even a mag-mount) probably does.

I understand that due to a recent scanner related case, a precedent or definition of "equip" might recently been set, and I'm trying to get the results.

3593. Re: Are Canadian Scanners as Restricted as US?

Newsgroup: rec.radio.scanner
Date: 1998-07-26 00:00:00 UTC
From: "Keith E. Risler" <keith_risler@zdnetmail.com>
Message-ID: <6pgs2b$i7k$1@demon.uunet.ca>
Source record: 150899

Scanners sold in Canada may or may not be restricted in terms of cell phone frequencies. Radio Shack in Canada to my knowledge does not itself sell cellular-enabled scanners in Canada, but independent electronics stores do seem to in some cases. Therefore the sale must in itself be legal here.

There is at least one web site for a Canadian store offering an older Radio Shack model with cellular frequencies enabled. The store claims on its site that it is selling the the scanner with a European RS chip. Of course U.S. customers would not be able to buy such a scanner if it were for delivery to the U.S.

There is at least one Toronto-area store that sells scanners with cell phone frequencies enabled, since it evidently it is not illegal here in Canada to listen in on cell calls or to listen in on cordless phone calls.

Canadian law regarding what one does with what is heard is similar to that in the U.S. in other respects. The listener is not supposed to disclose what was heard.

Really depends on what you need one for and what you put it on.

Windows with much curve will cause the antenna to fall off. If you cant
use a mag mount or drill holes, its better than relying on a HT.

Just don't have as much gain because of the loss due to the coupling method.

3603. FS: Two Radius SP10 HTs

Newsgroup: rec.radio.scanner
Date: 1998-07-26 00:00:00 UTC
From: footage@panix.com
Message-ID: <footage-ya02408000R2607980111090001@news.panix.com>
Source record: 150923
Cross-posted to: rec.radio.swap,rec.radio.scanner

I offer two Motorola Radius SP-10 HTs, UHF 1-channel, CSQ, 2-watt (I think), model no. P24RRC20F2AA. Units are programmable with easily accessible DIP switches on the following freqs: 462.575, 462.625, 462.675, 464.325, 464.500, 464.550, 464.825, 467.7625, 467.8125, 467.850, 467.875, 467.900, 467.925, 469.2625, 469.500, 469.550.

Units come with flexible whip rubber duck antennas and AC wall charger/adapters. The units are in cosmetically in extra-fine condition but lack belt clips on the rear side (unless I can find them in the next few days). The only flaw is that on the rear side of each unit I have taped a list of frequencies with their DIP settings. If this were to be pulled off, the adhesive residue would have to be cleaned with alcohol or similar solution.

The radios are in excellent operating condition; the batteries have been recharged at most 15 times.

Asking $200 for the pair.

>Are they or aren't they.

All the time. They start around 899.000 and go all the way up through about 915.000 (with some other crap thrown in between). They're only secure in that they switch frequencies. Some more than others. Some will stay put for the duration of a call, others will switch as often as every few seconds. Newer models are all over the band. They're honestly hard to miss if you're scanning in that range (at least in So Cal...everyone's using those phones!). 900 Mhz phones also have a much longer range of scannability than those "10 channel" phones which reside in the 40MHz - 50MHz area...they will only pop up if you're literally less that 100 ft. from the source (unless of course you have a really great base unit with a big 'ol antenna).

Anyway, targeting folks to listen to is unlawful.

BTW, this is based on my own experience, if I am in error, someone please correct me! :-)

Hello scanner dudes,
I am in the process of building an interface for my 8000 but am not going to have all the parts before I leave for vacation on Aug,31. I am looking for someone in upstate New York (driving distance form Albany) who has an interface and would be willing to program or clone the European Bandplan into my AR8000. I have the software but not the complete interface.
Thanks in advance for any help,
Eddie Kosloski

You'll find Oakland County Skywarn on 147.14. Wayne County on the n8djp
repeater at 147.16. And Washtenaw On 145.15
I'm on the western edge of Wayne, so I listen to Washetenaw....for the
past 10 years it's been the best weather alert system around...

Wilco:

Just trying to figure out how to program an AR8000 is a pretty good
keypad trick! :)

Most of the tricks with an AR8000 are through software.

OK, here's the scenerio.

A. Bank one and bank two are both filled.
B. Some of the same user ID's are in both bank one and bank two.
C. If I have a given User ID (example 100-1) locked/out in bank one and L/O in Bank two; then UNLOCK User ID 100-1 in Bank two, it will automatically unlock it in Bank One as well.

Is this a fluke? Is there anyway to avoid this from happening?

>be used ?

Can't help you with the freqs, but yes he is coming. The big bash is at Alec Bakldwin/Kim Basinger's home, but there are other parties etc. The DNC hopes to cellect $2 million in donations(entrance fees).

I live about 15 miles from these locations on a high hill, and certainly want to try to see what happens radio-wise, but a thought

(No, I'm not offering to do this at all!!)

Could'nt scanner buffs put the audio from an event like this on the internet as some sort of audio file/
We could monitor local PD/FD/ broadcast news links/ all the stuff that's legal and the rest of the scanner community could listen in.
Maybe not this Presidential trip, but others?
Or how about supporting programmable scanners in various cities which could be listened to on the net? A scanner group could give reciprocity to other scanner groups offering the same access.

One Shortwave listener in washington DC has his Drake R-8 receiver hooked up so you can listen for 10 or 15 seconds to any frequency in its range, over the internet.

Why not scanners (to the degree its legal)?

In Trunking mode, when you lock out an ID from anywhere (search mode, bank 1, bank2, etc.) it locks it out entirely for that system. If you lock it out in bank 1 that means it is locked out in every memory bank and in search mode. Sucks but that's the way it works.

Amazing.

> My opinion is he is doing a disservice to the scanning
> community. Its a hobby; NOT a for PROFIT business!

Soooo what exactly have YOU posted to the
hobby that has any particular value?

Oh, and why do you willingly pay GOOD
money for your radios, antennas, computers,
carrying cases, batteries, pens, pencils,
paper, magazines, service manuals, Internet
service. and the other stuff it takes to
support scanning? You DO PAY for most of
that unless you steal it.

You happily pay for all that other stuff.
It's ONLY a hobby, remember?

How does that make this a beggar's forum?

Well, you get what you pay for, pal. If
all you need to know is to clip D-502 in
a certain scanner, and can then find it
for yourself and do it, wonderful. It's
no big deal to GIVE you those few sentences.

But if you need a road map, directions,
pictures, schematics, and high quality to
put it all together, well......that doesn't
come for free.

But in effect, you are asking people to
stop whatever they are doing and go to work
for you....for FREE.

But YOU sure don't hand anything out here
for free....except a ration of shit, maybe.

Take a hike, Spike.

3635. WANTED: Lehigh Township Volunteer Fire & E.M.S. Frequencies

I did not bring this up -- YOU did. Try reading your original post, to
which I only replied. And I don't "own" any of the current problems on
this NG. Since YOU created them, YOU own them. Enjoy...

3644. Trunked Radio Systems Information in your area - Wanted!

Newsgroup: rec.radio.scanner
Date: 1998-07-26 00:00:00 UTC
From: "Lindsay C. Blanton" <lblant1@airmail.net>
Message-ID: <0EEBD9CEA76036E3.F53D66F2EED324DB.160EBAE8E028E1D9@library-proxy.airnews.net>
Source record: 150964
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Hello everyone,

Well, its been almost a year now since I started the Trunked Radio Systems information homepage, and it has been a complete success. We have had lots of individuals write white papers on fleetmapping, submit detailed information about Motorola and Ericsson systems in their areas, and provide an endless list of links and information regarding trs's in their areas. The age of trunker.exe and etrunk.exe have also opened up a whole new era for hobbiest.

If you haven't seen the page, point your browsers to:
http://web2.airmail.net/lblant1/trunked.htm

There are collections of good information for Trunked Radio communications, as well as links to other great sites with great information (like Warren Whidbey's site)

As always, if you have some good in-depth information on a Trunked Radio system in your area, please forward it along. It would be greatly appreciated. We are especially looking for detailed system info, Smartzone site info, trunker and etrunk data files, and anything else relevant to Trunked Radio.

Thanks, and happy Trunktracking to EVERYONE!

-Lb

Yes, & this NG has been waiting nearly 2 years or longer for Bill
to post proof of his degrees. When you & others hold him to the same
standard you expect me to meet, then I will give you what you want.
Otherwise, if you continue to use the double standard I will simply
ignore your request.

Mackey is a two-bit liar, but as you say, it's a wll known fact. His antics--ranging from engaging in personal vendettas to computer trespassing--are well documented. He's been caught many, many times. It's only his lack of pride and his minimal sense of self worth that keeps him skulking around here.

I have been watching this thread for some time noting all the various
methods of installing a ground rod. Thought I would post an excerpt
form a recent article in a trade magazine which describes how the pros
do it.

"An effective grounding system should be more that just copper wire
attached to a strand of wire. For example [company name withheld by
me] starts with a high-quality, 2"-diameter copper tube with an
exothermically welded pigtail. Breather holes are drilled at the top
to bring moisture and weep hole are placed along the length of the
tube in order to form electrolytic roots. The tube is filled with
Calsolyte, and electrolytic compound that attracts moisture from the
air. The rod is then inserted into the earth and surrounded by a
backfill of bentonite clay material. ï¿½
Over time, the clay increases in density, adhering to the rod surface
and creating an excellent conductive medium with the surrounding soil.
The clay is non-corrosive, with a pH of 8.0 and also protects the rod
from acids in the soil. The clay has a resistivity of 2.5 Ohms/meter,
with in conjunction with the electrolytic solution inside the pipe
increases the overall effectiveness of the system. The system is
designed to improve performance over time and provide a seasonal
stabilityï¿½"

The article goes on to say that several of these tubes are normally
used in an installation.

3653. Sick PCR1000 fixed with EX-2099 software

Newsgroup: rec.radio.scanner
Date: 1998-07-26 00:00:00 UTC
From: dlonard@my-dejanews.com
Message-ID: <6pe5bmndv1@nnrp1.dejanews.com>
Source record: 151007

I've kept up with the discussions on www.qth.net
in the PCR-1000 group regarding the EX-2099
alignment software. To those who found the http
site (http://www.multiradio.com.ar/utiles.htm), I
am eternally grateful. My radio was sick but after
using data from other owner's radios, I was able to
restore my PCR1000 nearly back to its original state.
The EEPROM registered a value of 144 for all the
BPF settings in the misaligned state. My reference
oscillator was also off (about 50 Hz) but I was able
to realign it also using WWV as a reference signal
and counting the signal tones, playing with the
reference crystal adjustment setting. Two hex dumps
of the EPPROM can be found at www.qth.net, btw.
Comparing the values between the two radios indicates
that most values seem to vary a little bit while
others may vary a lot. Doing a real alignment is
going to require tuning multiple band pass filters
spanning the spectrum of the radio. One of the
most critical things seemed to be getting the S0
meter setting, squelch setting and the like to match
that from the two hex dumps I pulled of the net.

Good luck to those still suffering from the misalignment
blues.

Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.swap

Greetings!

I have a modified PRO-34 scanner that is spare to my needs. The scanner has been modified to restore the missing 800 MHz coverage, and has a faster clock crystal for greater scanning and searching speeds. The PRO-34 works great and is in very good cosmetic condition. I have a set of Radio Shack nicads, the manual, and original antenna to go with the PRO-34.

$125. shipped via UPS or Priority Mail.

Thanks for the read!

73,

Tony Schroeder N8SNC

There are 3 types of 900 Mhz phones. Analog, digital, and digital spread spectrum. The anaog can be heard by a scanner. The digitals can not, (but I have heard that with some great effort there are converters out there). However the digital spread spectrum ones are pretty much impossible to scan.

Personally, I wouldn't buy that model for that much. There's some good info at ftp://204.210.11.204/mod_info/mod-faq.txt Some models can be modified for increased speed, memory or even to be able to receive cellular (though it is now illegal to do so in the USA). At the website I posted, you'll gather much of the info you need to get started. You should have a good idea of what model will suit your needs. Then search the WWW for that model. Sometimes you can find what you are looking for there. All else fails, you will know which models to look for at the pawn shops, flea markets, and hamfests.

Another thing to consider about the model you listed for $120. Radio Shack is selling their PRO-90 new for only $199 (with a coupon). It is made by Uniden and is the same thing as the BC235XLT. Both are trunking models. For info on what "trunking" is, see http://www.trunktracker.com/

Hope that helps.

Robert

I offer an AR-8000, S/N 010558, clean and in excellent operating condition. The unit has full frequency coverage (500 KHz-up) with UK bandplan (can be changed with computer hookup). There are light scratches on the plastic window that covers the display, but they have no effect on readability. I have removed the belt clip and the two screws that held it to the body of the unit. I'll try to find these before shipping, but make no guarantees. The unit comes with an 800 MHz rubber duck (8.5 inches long). I purchased the unit while in the UK, and received a British AC adapter, which I no longer have, so the unit is being sold with no AC adapter/recharger.

Asking $250. I will pay UPS shipping in the US or Canada.

From: catz@netrox.net
Message-ID: <35c00ea4.469830079@news.netrox.net>
Source record: 150725

I am considering either a RS Pro 90 or the BC235XLT, which I
understand to be the same model except the BC comes with an extra
battery and charger.

My question is this:

I am buying this scanner not only to dabble and scan with, but also in
the case of emergencies and power failures. How does one go about
charging this battery without power? Has anyone found a solar powered
charger that will work with this battery type on either of these
models?

I'm considering foregoing both of these models for one that uses
standard AA's that I can recharge via a solar recharger.

PS: RS is selling the Pro 90 (trunktracker) this week for 219.00.
Good deal? I see Grove has 'em for the same price, but my feeling is
that the BC would be a better deal for 244.00 (from Grove) with the
extra batt and charger.

All comments appreciated and welcome.

3673. Scanners that include the Shortwave Freq's...questions

Newsgroup: rec.radio.scanner
Date: 1998-07-27 00:00:00 UTC
From: catz@netrox.net
Message-ID: <35c11047.470248904@news.netrox.net>
Source record: 150727

I am considering purchasing a scanner.....am looking at the RS Pro 90
and the BC235XLT.

I am interested in scanning US Governement HF that fall around (aside
from the standard channels that both of these models can access):

3277.0 - National Guard

US Army - 9999.0

Coast Guard - 4048.5

Etc......(pulled from page 12 of the July issue of Monitoring Times)

To the best of my knowledge, these two scanners won't cut it on these
frequencies. Also to the best of my knowledge, the ICOM R10 and the
AR8000B will.

One of the obvious difference between these two sets of scanners is
the pricing. Heres my question:

Should I just concentrate on getting the "standard" scanner such as
the Pro 90 or the BC and just simply get another radio that can handle
the frequencies outside the range of these scanners that would carry
the US Gov channels? If I can "do it all" with one device, that would
be preferable. My other considerations are that the device be:

handheld
use standard AA batts as an option, if possible (easier
recharging....I am aware the Pro and the BC do not contain these types
of batts but the ICOM and the AR do)

Any suggestions would be appreciated (regarding how to get it all for
the least amount of cash for the best price) as well as comments from
those who own any of the above models. Thanks!

Catz

I'm assuming you own a car, but if you don't, then forgive my ignorance. But, what I was going to say is that the PRO-90/BC235 uses 12VDC negative ground, so you can rig up a cigar-lighter-adapter to it and charge it up just fine. If you don't have your own car, you can always pick up a car battery, and hook it up to a trickle charger in the garage, or something, and use that...

In a word, yes. I have heard from reliable sources that the shortwave receivers in the all-in-one units are no where near the quality of a dedicated shortwave radio. Also, you can then listen to them both at the same time, so you don't miss any "good stuff".

Yeah, that's the problem with 'em. It's too damned tempting to turn 'em off and see what your enemy has to say.

I'm not taking any sides here, but why don't you set the example and apply your own filter to him, and just drop this b.s.?

Or maybe you enjoy this sort of thing? Your call, but people in glass houses.... I think you know what I mean.

Food for thought.

Nick,
Thanks for putting me on the "Honor Role" list. I see that you realize that I do speak of scanners every now & again. Sorry, but I`m not even in the same league as Mr. Cheek. (but wouldn`t it be nice to have two people that know scanners inside-out?) To bad you don`t understand what the "ON" switch does.

As far as doing Mr. Cheeks bidding for him, BUZZZ, wrong again Bucko. I have seen him work. He don`t need my help. I walk my road, he walks his. We do cross paths from time to time. (Real nice guy too.)

Now...as far as comming out only for Mackey, sorry Bozo . Better get yer eyes checked. I haven`t slammed him in quit a while. I don`t discriminate, but it was just too easy. Not much of a sport. I slam anyone that deserves it. Looks like you wanna be next. Tell ya what, If `n you DO get out of "The Black Box", I`ll respond in the fashion you set...no less.
Speaking of checking in, I hope you didn`t miss another appointment with your "therapist".

Sorry for not responding sooner, but you must be in my "reptile" file. I only noticed you from someone else`s posting on this matter. You wouldn`t happen to be OBFD, would you? That would explain alot. (I better check Dejanews & see what he`s been up to.) :>)

Charlie

I didn`t do it.
Nobody saw me do it.
You can`t prove anything!

You can also try the stuff used to remove scratches from compact discs. You can get it in audio stores. I used it for the panel of my AR8000 and it worked pretty well. Also, used it to remove minor Brillo pad scratches from the plastic front panel of our microwave.

Yes, you're quite right Dave. I received a couple of flame emails from
some weed wackers who took exception to being compared to Toilet Boy.
They staunchly reminded me that Macktard is a lower species than they
are and they heavily resented the intrusion of the friggin' loon into
their genus.

Hello,
Anyone know which scanners (new or old) can receive CB frequencies. I have a Realistic 2040 but want a
scanner that can monitor CB frequencies and I would like to do it as inexpensively as possible. Nothing fancy, just don't want to spend another $150 or more for a CB or Scanner. Thanks in advance.

Ken "not an equipment snob" Buffie

Yes, it is illegal to use evidence recorded from a scanner monitoring
cordless phones. That I know for sure, however I am not sure about it being
illegal having them programmed in. I will say that much.

This is where I draw the line.

NOT EVERYTHING is from another website. What you said is a TOTAL
exaggeration.

I've made my own Active Toolbar controls, among other programs on the site.
I DO note in the source code section it was NOT made by me, however I
received these programs and unfortunately didn't document who they were
from, although I tried to identify the authors for a few files.

I've also created ALL of the graphics. The sidebar graphics were *captured*
from Microsoft Office 97 (obviously not a website).

Please think before you humiliate a 15 year old's dignity. I am restraining
myself from saying anything more.

I agree! that kind of remark is tasteless and way out of line.
Those who recall the Kennedy assassination will never, I think, find any

sort of humor in such remarks. And, like Jack said, it is very liable to

get you put on a list somewhere -deservedly so.

Having said that, I will confess to being anything BUT a
supporter of Slick Willie. A wise parent would keep their young
daughters inside while he is in town. But WHATEVER you do, DON'T let her

wear a black beret! It brings out the worst in the guy - like waving a
red flag in front of a bull.

I know that most of the City of Lubbock, including the police, are on an 800 MHz trunked system. I believe it is an EDACS system and so you couldn't use a TrunkTracker type radio to scan it. The only frequencies I have are for amateur radio repeaters. If you want them then here they are:

Two Meter

145.190 (-) NB5STX
146.940 (-) (179.9) WB5BRY
147.200 (+) (162.2) WA5TBB - Linked to 444.975 - Used by Skywarn
147.300 (+) (88.5) N5ZTL
147.380 (+) KA5CZY
146.640 (-) (179.9) Littlefield - Caprock Radio Repeater Club Hub Connection
146.760 (-) (179.9) Abernathy - Caprock Radio Repeater Club Hub Connection
146.780 (-) (179.9) Sundown - Caprock Radio Repeater Club Hub Connection
147.000 (-) (179.9) Lubbock - Caprock Radio Repeater Club Hub Connection
147.060 (-) (179.9) Post - Caprock Radio Repeater Club Hub Connection
147.160 (-) 179.9) Crosbyton - Caprock Radio Repeater Club Hub Connection

Seventy Centimeter

443.675 (118.8 or 162.2) WA5TBB (Closed)
443.925 WA5TBB (Closed)
443.950 WB5R (TTARC remote base for 146.460)
444.000 (118.8) WB5BRY
444.400 (118.8) WB5BRY
444.500 (118.8) WB5BRY
444.700 (67.0) N5RAN (Caprock Radio Repeater Club)
444.850 (162.2) WA5TBB (Located in Littlefield)
444.875 N5YBW (Located in Ransom Canyon)
444.900 (118.8) WB5RVV
444.975 (162.2) WA5TBB - Linked to 147.200 - Used by Skywarn

Ryan, I've been watching this go back and forth for some time and I now feel compelled to respond to you. You're on the net, you're posting/playing with the big boys now. If you post something that's inaccurate or questionable, you're gonna get detracting opinions - this is (Like Cheek often reminds others) a total anarchy. I remember your posting of "whomever" told another that it's okay to listen to cordless phones then "whomever" was legally guilty as the listener.

This is wrong - acknowledge you're mistake and move on. The back & forth you're getting
(which I believe is the source of this thread) is a result of you being dead wrong and unwilling to back down.

I think you've sufficiently annoyed several participants on this News Group and the more predatorial in nature will not let up EVER. That's a fact.

Also, I've observed on several occasions that you remind the world you're 15 years old, it doesn't matter - again you're with the big guys now and repeatedly citing this fact only undermines you're internet persona. If you're gonna play tough - you're only going to be respected less (perceived : weak) when you resort to constantly reminding everyone of you're age.

This is not a flame - consider it advise from a Dutch Uncle.

Hopefully this can be my last apology to this newsgroup...

Anyway, Jack and I have been "fighting" in a thread here and there, and I just would like it to stop. Like he said, I DO like to have the last word, which does perpetuate it, however Jack is the same way - he also must have the last word. Two people can never have the last word, so in theory, this will keep going.

Hopefully, it won't reach the killfile zone, but I think ignoring it would be good.

And, to Jack, you don't have to be rude when someone's wrong. Being rude to someone who is will just toughen them up more beyond the point of "immediate admission". In other words, tell them politely (proof is good) and maybe they will accept it more gracefully.

I apologize to others (MAlexder, JPS, Bud Jamison to name a few) for any rude comments.

I myself will try (although I hate to use that word) to stop my crap...

3700. FAQ: Cheek & Mackey - For the newbies ....

Newsgroup: rec.radio.scanner
Date: 1998-07-27 00:00:00 UTC
From: "Mr. WireHead" <wirehead@pacbell.net>
Message-ID: <35BD531C.F4ADD65A@pacbell.net>
Source record: 150754

Reposted without permission - Original author is k4cc@aol.com (K4CC)
and was originally posted 6/20/98 in the alt.scanner usenet newsgroup.

Frequently Asked Questions about Cheek and Mackey:

1. Who is Cheek?
Bill Cheek is a fairly well known author, experimenter, engineer who
has contributed a great deal to the scanner hobby for a number of
years
through his books, magazine columns, newsletters and newsgroup
postings.

2. Who is Mackey?
John Mackey is the self-appointed guardian of the entire NG who has
the need to be noticed by posting messages that have no bearing on
the scanner
hobby and which are factually and grammatically suspect.

3. Why don't they like each other?
Mackey feels that Cheek is a demon, a liar and general miscreant if
he writes anything that is in even faint disagreement with anyone, be
it
Mackey or anyone else. Cheek feels sorry for Mackey and has attempted
to help him
by indulging Mackey's need to post meaningless sludge.

4. What are the "problems" in the NG to which Mackey keeps referring?
No one is quite sure, as they seem to be problems only to Mackey,
who
seems to feel that they are problems for everyone else, whether they
are or
not.

5. How can I keep myself from being subjected to Cheek's and Mackey's
posts?
There are any number of sophisticated techniques available
including,
but not limited to: filtering, skipping or not reading them.

6. What is smegma?
Check the dictionary definition for snot.

There are two major products that came out of Berkeley: LSD & UNIX.
We do not believe this to be a coincidence ....

I have a few Minitor 1 pagers for sale. The list is as follows:

Qty Description
Price
4 450-470 mhz, with 2 tone decode $30/each
1 43 mhz, carrier squelch
$30
2 163 mhz, carrier squelch
$25/each

Or the whole mess for $140 plus shipping. All sales COD/CASH or prepaid please.

I will be on vacation for a week and may be delayed in responding if I get responses after midweek. My appoligies if I am delayed in responding to any offers.

Thanks!

I have for sale nine brand new (but not in the box) Motorola Dimension IV pagers on 855.3875 mhz. These are two tone and voice pagers very similar to Spirit pagers or the Dimension pagers sold for use on 900 mhz systems. Motorola only sold these for a few years.

These are being sold for $60 each without reeds, chargers or batteries. If someone wants all nine, they can have them for $400.

All sales are COD CASH or prepaid and shipping is extra. I will also be of the internet for a week and will not be able to respond to messages for the next week or so. I appoligize if I am delayed in getting back to anyone making offers.

Thanks!

Those things are used by the military for safety reasons. They have no effect on RF.

When military vehicles are moving the long whip antennas are bent down over the front of the vehicle to keep from bashing them against trees and such. The bulbs are fixed to the antenna tip to prevent spearing people - especially officers.

No one pays for trade journals. But they're
not hobby magazines, either. And they're
generally not available to hobbyists.

What about your radios? Antennas? Computers?
Software? And all the other stuff it takes to
support your hobby? You get all that "free", too?
If so, your mother must buy it for you.......

And, you sure don't work for free, so why
should others have to?

No. Not the FM broadcast band, anyway, and
not the wide FM mode.

Probably not unless you can fix 'em yourself.

> Both are not recieving and signal from any bands.
> anyone know of a common cause of failure in these unit?

It will take troubleshooting and diagnosis to
locate and diagnose the problems.

You can check around the power supplies for
proper DC outputs, typically +12v. Look for
blown fuses and obvious problems.

Otherwise, you're kind of out of luck.

Try turning off your monitor... I am finding that my monitor is
noiser than my computer...

You may be able to do what you want with the monitor turned off.
Certainly not ideal, but every step helps towards the destination.

This is the European model of the PRO-2006. It does not block
the cellular band. It would be illegal to use in the the USA
but I'm sure you live somewhere else.

I see its ok to post jokes. Here is one about Mackey to add to the list of ha-has about him.

MACKY THE BURGLAR

John Macky, an escaped convict, broke into a house in Portland, Oregon, and tied up a young couple who were asleep in the bedroom.

As Macky ransacked the house, the husband worked off his gag, and turned to his voluptuous young wife, bound up on the bed in a skimpy nightgown, and whispered, "Honey, Macky hasn't seen a woman in years. Just cooperate with anything he wants. If he wants to have sex with you, just go along with it and pretend you like it. Our lives depend on it!"

"Honey," the wife gasped, spitting out her gag, "I'm so relieved you feel that way, because Macky whispered to me that he thinks you're really cute !"

If the 8000 was so wonderful, I would be intrested in knowing why you sold it.

Without knowing what you expect the Yupi to do for you that the AOR doesn't,
there's no way to answer your question.

3737. EX-2099 and PCR1000 - alignment procedure

Newsgroup: rec.radio.scanner
Date: 1998-07-27 00:00:00 UTC
From: dlonard@my-dejanews.com
Message-ID: <6pij2c$7mv$1@nnrp1.dejanews.com>
Source record: 150792

Preliminary information on the EX-2099 alignment software for the PCR1000

Much of this has already been mentioned by others on www.qth.net, much of which is very important to heed, especially if your radio has not been corrupted (otherwise you've got nothing to lose). I am by no means an authority on the software so take all my advice with a grain of salt. But this approach has worked for me.

1. First, copy the ADJ2009.DAT file to another filename. This file contains EEPROM data from some other radio. It wont match your radio, but at least you will have some baseline data if your EEPROM is corrupted.

2. Run the EX-2099 software, turn the radio on.

3. In the EEPROM subwindow of the control panel, select START then, read the EEPROM.

4. Stop here. This is important, especially if your radio contains a good uncorrupted EEPROM. Exit EX-2099 and copy the ADJ2009.DAT file to another filename as a backup. Should you screw things up, it will be extremely handy to have your UNIQUE EEPROM settings safely stored away.

5. Run the EX-2099 program again, select the EEPROM subwindow, load the radio's EEPROM values. Select the EEPROM table on the window and type in EEPROM values from a healthy radio. Many such tables are now available on www.qth.net. At this point, you should be able to tune to an FM signal and see that the tuning indicator is centered and not pointing to the left (look on the radio settings window).

6. Next, check your reference oscillator drift, mine had drifted considerably. I tuned to WWV on USB and fed my audio output to a soundblaster driven spectrum analyzer (FFTDSP4.2). Move the reference oscillator drift value until the "one minute beep" reads 1000 Hz. Select Write to write the value to the EEPROM table.

7. Next comes the BPF filters. Select the BPF peak tuning points subwindow. If you have a signal generator capable of transmitting at the frequencies specified by EX-2099 when you select each BPF then transmit on the indicated frequency. Move the value of the BPF tuning peak point back and forth until the signal is at its strongest. Look at the S-meter value in the upper right. Once the best value is obtained, select Write. Move through all the BPF-tuning points. If a signal source is unavailable, then do this: Select the BPF filter to tune. Set the radio to USB and move the value of the BPF back and forth until the maximum amount of noise is heard. If possible, then find a signal in that BPF's range and move the bar back and forth a few

points until the signal is strongest. Setting all the BFP's correctly is very important. Data from other radios will not be adequate for good performance, you will notice that the tolerances range for each BPF is pretty tight and are unique to your radio.

8. Next thing to do is to set the S-meter zero reading value. Select the appropriate subwindow. Place a 50-ohm dummy load on the receiver and then select Write to put this value into the EEPROM table. The S-3, 5, 7, etc values are going to be hard to do without the right equipment so I borrowed the values from the hex dumps from other healthy radios. For the bandscope, I also borrowed values from other healthy radios.

9. Without the proper equipment, setting the BPF S-9 values is going to be imposible so I borrowed this from other healthy radios. I assume that the S-meter readings may be on difference ranges in difference spectrum chuncks, but since S-meter readings are arbitrary, this probably doesn't matter too much.

10. I used borrowed squelch related values from other healthy radios which are the same as the default values specified by the EX-2099.

11. When this is all done, make sure to hit the Rx Set button on the EEPROM subwindow to save what you've done.

Again, I am not an expert with the radio, I don't have a service manual and could be completely wrong about any or all of this, but my radio is now operating at what appears its original state of performance.

>
I just was wondering if anyone in the group has had the opportunity to
use one and what their impression of it is. Reason for selling the
8000, was 3 fold, 1) wedding and honeymoon requires $$$$, 2) wanted to
purchase the 9000 really bad but because of number 1 didn't have the
$$$$, and 3) was not using it for the original reason I bought it ie,
to scout around and computer control. Any input will be helpful if
you have had an opportunity to use the mvt 9000. Thanks. Keith

Rick Troha wrote in message ...
>I was wondering if Canadian scanners have the same gaps in their
>frequency range as US scanners? No cell phone freqs, etc.?

Depends on who sells them. Radio Shack and Uniden scanners, for example, are manufactured according to American requirements because that is the main market. Other manufacturers may have U.S. and non-U.S. versions of their scanners.

Many Canadians believe that mobile phone monitoring is perfectly legal there, as opposed to the law in the USA. Canadian Federal law seems to say otherwise. See the NF2G Scannist Pages - Canada section at www.ggw.org/nf2g/canada_index.html and click on "Laws & Regulations".

Here is some more funny jokes about John Mackey.

MACKY AND THE HELP DESK

John Macky called in a trouble report to his
company's Help Desk when his computer wouldn't
turn on. The troubleshooter found that Macky
had plugged his power strip back into itself
and didn't understand why there was no power.

MACKY AND THE FAX MACHINE

Macky: "Do you know anything about this fax-machine?"
Secretary: "A little. What's wrong?"
Macky: "Well, I sent a fax, and the recipient called
back to say all he received was a cover-sheet
and a blank page. I tried it again, and the
same thing happened."
Secretary: "How did you load the sheet?"
Macky: "It's a pretty sensitive memo, and I didn't want
anyone else to read it by accident, so I folded
it so only the recipient would open it and read it."

MACKY AND A DEAD BATTERY

John Macky was found weeping and crying his heart out
beside his car. "Do you need some help?", a passerby
asked. Macky replied, "I knew I should have replaced
the battery in this remote door unlocker. Now I can't
get into my car. Do you think they (pointing to a distant
convenience store) would have a battery for this?"
The passerby replied, "Hmmm, I dunno. Do you have an
alarm, too?"

"No, just this remote thingy," Macky answered, handing it
and the car keys to the passerby, who took the key and
manually unlocked the door, and replied, "Why don't you
just drive over there and check on the batteries...it's
a long walk."

MACKY AND THE HELP DESK - PART II

Help Desk: What does the screen say now?
Macky: It says, 'Hit ENTER when ready'.
Help Desk: Well?
Macky: How do I know when it's ready?

MACKY WORKS AT AN INSURANCE COMPANY

George Jones called his car insurance company to tell them to change his address from Texas to Vermont. John Macky, who took the call asked where Vermont was. As George tried to explain, Macky interrupted and said, "Look, I'm not stupid or anything, just tell me what state it's in?"

MACKY THE TYPIST

Several years ago John Macky was typing and turned to a secretary and said, "I'm almost out of typing paper. What do I do?" "Just use copier paper," she told him. With that, Macky took his last remaining blank piece of paper, put it on the copier and made five blank copies.

MACKY AND THE HELP DESK - PART III

One day one John Macky called the computer help desk and asked if anything "bad" would happen if he dropped coins into the openings of his PC. The Help Desk asked if this was something he was thinking of doing. Macky snorted, "never mind" and hung up. Suspicious, the Help Desk tech got out his trusty tool kit and paid Macky a visit. Opening Macky's CPU case, sure enough, there was 40 cents.

MACKY GETS SYSADMIN JOB

John Macky once got a job as a System Admininstrator and one of HIS servers crashed. He inserted a CD and needed to type a path name to a directory named "i386." He started to type it and paused, and asked a nearby secretary, "Where on the keyboard is that line thing?" The secretary asked what the hell he was talking about, and Macky mumbled, "You know, that one that looks like an upside-down exclamation mark." The secretary replied, "You mean the letter 'i'?" Macky replied, "Yeah, that's it!"

MACKY AT HOME

John Macky had a broken lamp which he wanted to discard. Unfortunately, the power cord ran under his refrigerator, making it impossible to move the lamp while the cord was attached. He decided to cut the cord, since the lamp was unusable anyway. He didn't remember to unplug it first. His landlord, investigating weird noises, found Macky thrashing and rolling back and forth on the kitchen floor.

MACKY'S MOTOR HOME

John Macky's large motorhome was towed into the garage. The front of the vehicle was in dire need of repair and the whole thing generally looked like an extra in "Twister." The service manager asked what had happened. Macky replied

that he had set the cruise control, then went in back to
make a sandwich.

MACKY ONCE WAS A SECRETARY

I called a company and asked to speak to Bob. John Macky
answered said, "Bob is on vacation. Would you like to hold?"

MACKY AT HOME - PART II

Curious, John Macky called Blockbuster and mentioned that
before the movie begins a message comes on the screen saying,
"This movie has been altered to fit your television screen."
Macky then added: "How do they know what size screen I have?

MACKY AND THE HELP DESK - PART IV

Macky: Hello, Help Desk? Uhh, the coffee cup holder on my
PC broke off.
Help Desk: Huh? What do you mean "coffee cup holder"?
Macky: You know, that little shelf that slides in
and out when you push a button?
Help Desk: No, I don't understand. Please describe it.
Macky: It's on the front of the computer just below
the floppy drive and just above the power
switch, and when I press this button, a door
opens up and out comes the coffee cup holder.
Well, this morning, it broke off and spilled
coffee all over me and the computer.
Help Desk: Wait a minute......(Pssst, hey Boss, it's Macky
again. This time he broke off the disk carriage
on his CD-ROM.)

MACKY AND THE HELP DESK - PART V

Macky: Hello, Help Desk? Uhh, where is the "ANY" key on
my keyboard.
Help Desk: The "enny" key?
Macky: Yes that's the one. I can't find it.
Help Desk: I don't know what the hell you are talking about,
so please explain and give details.
Macky: Well, on my screen it says, "Press any key" and
I can't find it.
Help Desk: Wait a minute......(Pssst, hey Boss, this is it.
I've had it. You can take this job and shove it.

Sorry, but the NEC has been mentioned throughout this thread.
Furthermore, the NEC covers all the grounds on the premises,
including grounds for communications circuits and antennas and
specifically refers you in 800 - 40 (c) to 250-115, which calls
for listed clamps, if clamps are used. See also 810-21, 250-83,
820-40 (c)

>OK, Cheek-A-Likes, that's the roll call.

Didn't I killfile you - oh well. Informative post, although the fact that you still think I'm Bill proves you wouldn't know your ass from a hole in your head (but then, come to think of it, neither would anyone else.)

However our dear pal Mackey is gonna throw a hissy if we don't give him equal billing. So here is my list of Mackerloons, or the Scarlet Mackerels band of Fairy Nice Fellows:

Peter "who am I today" J. Boe

Nick "It's me! John! Hee Hee!"

clarence "Hi guys! Me again! John!" green

Stuart "I'm really Peter and I just love John's ass" Upton

Phantom "It's me, John again! If I cancel all of my own posts under the guise of this rogue cancellor then everyone will think Bill and his friends are picking on me for no reason, cause I'm a supergenius, yup, yup, dur-hur!" Cancellor from Warpgate.

Zappa "I watched the Net 30 times. That make me a hacker. Look, I've got your credit card number. No wait, that's just Pac-Man.." f (Peter, you bad bad little man)

I'm sure John and Peter have made up other alteregos that I have missed (It makes for such fascinating pillow talk for them) It proves that they're both loonies, but one thing remains unclear:

Who's the "man" of the house? C'mon you two lovebirds, fess up! we won't tell...

Sure! Just take the bricks out of the box and replace them with your cell phone.

A similar process will work to receive AM/FM broadcast and TV audio (and video too! Wow). And you can hook it all up to your PC (set box on top of monitor)

If the receiver is indeed mint, the going rate would be in the vincinity of 600-800 dollars...maybe a little more. The original box and packing material will ensure top dollar, along with the manual. If any mods have been done, could cause value to go either way. (A hack job vs.professional technical work). The AOR 3000A is a nice radio, if I had the cash, I'd make an offer. Good luck to you.

I ran into trouble trying to install the 96 version on NT when I didn't have
a C: drive (everything was on D:).

Mapping C: to point to the D: made it work okay.

I'm running the 98 version on a dual-CPU NTWS 4.0/sp3 system that has both
C: and D: and it works just fine.

> has something to hide

Obviously you have something to hide, Toilet Boy: you don't have the
degrees you claim.

It's real simple. You claimed to have the degrees. I, and others,
publicly said we don't believe you and challenged you to prove your
claims. That was three years ago. Until you prove otherwise, you are
a liar and a fraud.

I wouldn't program the European bandplan if you are planning to use it
in the states. It will screw up the step and mode for may things you
may wish to monitor. There are special us bandplans that you will find
much better. ARC comes with the one you want. Good luck with the
interface

That is correct! Unless you have a valid amateur radio (HAM) license, in your possession, or, a scanner permit issued by the Michigan State Police.

Regarding getting caught, I've heard everything from a simple warning, to an arrest, car impoundment, stiff fines, etc. No personal experience.

Just wanted to add a quick note to that. You have to have a _minimum_ technican class license to get away with it from the amateur radio end. I've got a permit from the state police, but I don't know how easy it would be to get one unless involved in the emergency service field..

That's called a "passive repeater" antenna system. It was profiled in Popular Communications some years back. People use them to pipe signals into tunnels and caves and around hills. Yeah, they can work, but not as good as a direct-wire antenna.

I work in a nuclear power plant, and i can assure you that a) you are receiving more radiation from your computer monitor that you are from the nuke plant; and b) communications in the nuclear industry are very boring and repetitive.

However, if you've got insomnia and are looking for a cure, check a Percon Freq CD and check out the plant licensee (Duke, NU, etc) and maybe find out what security contractor they are using (Burns, Wackenhut, etc).

Good Luck!

"The early bird may get the worm,
but the second mouse gets the cheese."

3780. Questionable future for scanners

Newsgroup: rec.radio.scanner

Message-ID: <35BC0FF6.756EFCD7@mail.ultraweb.net>
Source record: 150835

With the advent of digital encryption technologies to public service bands and the federal/local government's concern to keep the general public as ignorant as possible as to their operations what kind of future does this hold for the monitoring enthusiast ?

This senerio reminds me of the encryption programs developed for hard wired communications for the feds , I use PGP when I feel a need to do so. "The cats out of the bag".

It seems the feds have to learn a lesson about scrambled communications , it's a double edge sword , I can't wait to get my hands on a good set of DES VHF or UHF HTs.

3781. WTT Trade My TR4500 for your 99 ch MT1000

I sorry it wasnt a compliment. It ment you act like a brat kid that begs for attention even with a belt.

>> there is no record of you talking about scanners at all.

>Then you didn't search very well.

Why do you say dumb statements? Of course I searched very well and I told you I been watching and noticing for a long time. You screamed and begged for attention for a very long time according to most people and the facts are witnessed like at dejanews just for one example and what I saw too.

I told you I am new here and lurking. You musnt assume I am dumb like you think ever body else is . Not ever body that is new is also dumb. I watched you a long time before I said any thing. And I only said some thing because you are strange and dont make your point whatever it is.

>Was there a point to your rambling?

Only to see if you could have a conversation about your self as seen in the eyes of some body else. I noticed that you dont ever answer any body elses points either. You just ignore there good points and play your dumb game. Some body described it as circule logic and that is a good expression for your ways.

What is your point Mackey? I seen you here for all the time sputtering and blowing and fooling around and trying to make your self look good but you dont ever do nothing except bother people and handle your self circularly. You just spin and spin and spin and go no wheres.

But I just want to know what is your point. You been trying to make a statement for so long and it only sputters out like slobber out your mouth and drips onto your shirt, I know you dont like that but I wish you could see your self like I do who doesnt care one way or the other except that you just are confusing. If you confuse me I know you confuse other people and I dont see any body that admires you and says you are a respectable man but so many says you are no good. I say what good are you? Tell me what you are tryieing to do.

May be you can tell me what I should see instead of what I do see? If I make mistake of you then you tell me about that okay? I even try to see you like you may be see your self but this makes me more confused because your circule logic is weird.

So you explain to me please. I will listen.

You need to read the whole message , we are not talking about grounds
for the main electrical service.

We are talking about antenna and rf grounds and there is a big
difference between the two.

3787. NY Times: The Cell Phone Call as Literature

Newsgroup: rec.radio.scanner
Date: 1998-07-27 00:00:00 UTC
From: jmrubin@cyberspace.org
Message-ID: <35bc1853.23726139@enews.newsguy.com>
Source record: 150842

http://www.nytimes.com/library/tech/98/07/biztech/articles/27space.html

This is an article about a book to be published which consists of cell phone conversations. Of course, repeating non-ham/non-broadcast transmission content to others has been illegal at least since the 1930's, even before the ECPA made it illegal to listen.

Of course, it may serve as a wakeup call for cellular customers who have been BS'ed by their carrier that their conversations are actually private. (although digital is a lot more private than analog, even with the inadequate encryption that the government is promoting)

I listened to cellular for a short period of time, after I took a city bus and, while passing through a housing project, I saw some er-um young enterpreneurs using cellular phones. I gave up mostly because I found myself bored to death.

Guys, guys, guys ... let's all calm down. Who really gives a shit who has a degree or not. Having a degree does not prove intelligence. It just means you went to school. I have known many people over the years that didn't have a degree but were extremely smart. By the same token. I have worked with a few people that had degrees that couldn't tell the time of day.

This is just a newsgroup. Who cares about a degree if we can help each other learn?

I really don't care if Bill or John either one has a degree as long as I can learn from them. Some people you learn from, some people you ignore because they know nothing.

Just my opinion.

I DID that with Uniden and got some engineer to explain quite a few things
to me...and a few undocumented things. I KNOW Uniden is making $$$
everytime I stop somewhere traveling I see plenty of there stuff being sold.

I brought 2 radio shack scanners at a yard sale for $10.00.

Are these scanners worth the fix.

THE model numbers are pro 2003 and the pro 2011.

Both are not recieving and signal from any bands.
anyone know of a common cause of failure in these unit?

thanks

Radio Shack is in clearing out most of what it has/had to make
room for new models. Their PRO-26 and PRO-60 are what you wanted
but since they've been discontinued for a while, you'll have a
hard time locating one new.

You might try a Uniden BC3000XLT but I personally find all
the cellular images in the 300-400MHz region bothersome. A
better choice would probably be the new Sony ICF-SC1 which
can be had in normal or "PC interfaceable" formats with
pricing about $260 and $320, respectively.

Reviews for these radios can be found at my site listed
below. Best of luck with your decision!

It's time to recable some of my scanner antennas and also one or two and I would like to know if anyone has some good sources that they have successfully used in the past. I'm leaning toward 50 ohm cable of .25 inch diameter but will consider others. Does anyone recommend RG-6 for both scanner and shortwave listening antennas? Also who has the best shipped prices? Thanks in advance. Art.

which will work just fine as a scanner feedline, as it is a low loss cable
with just a very slight impedance mismatch, which in receiving applications
will be unnoticeable. By all means, use it to feed your receivers, it will
do the job nicely.

Source record: 150867

Hello everyone..

Would like to know what are the best ways to possibly avoid computer interference to the scanner. Here's my situation. I have a generic clone PC, 166mhz CPU (no particular brand name, just uses Award BIOS and a genuine intel CPU chip). The scanner I have is a bearcat 55xlt. 10 channels, no big deal for what I need anyway. I'm trying to use it to listen in on the EMWIN datastream.

What happens is this. Everytime I turn on my computer, the interference from the PC drowns the EMWIN signal, into the static void. Meaning, the system cannot detect the actual signal going through the demodulator I have connected to it. It "sees data" coming to the serial port, but it doesn't know what to do with it because of the computer noise problem. It treats the computer noise as garbage binary data. I had a spare packet modem. Ran a test - binary data comes through, but it's again noise from the PC! I've tried moving the scanner away from the PC. I've tried moving the antenna FAR FAR away (more than 3' from PC still indoors - policy where I live no antennas). Still no luck.

So now what? What are my options to "ground" or keep this RFI from getting to my scanner? Are there any "radioshack" type solutions I can use to limit or actually prevent RFI from occurring? I'd like to use EMWIN but this problem is getting in the way...WeatherNode complains that the signal is too weak. Respectfully, because the stupid computer is drowning the signal everytime it's turned on. I even tried tapping into our rooftop antenna. Again, I get the signal fine, but it disappears when the PC is turned on. Damn! Pattern here....

The local area frequency where I tune into is 142.925 for Washington DC metro area. I hear also that with the speed of the PC I have (eg 166mhz) this may be the cause because the listen frequency is 142.925 -- for EMWIN. Any advice would be most appreciated. See, I can get the signal no problem -- but the PC just drowns it when weathernode tries to listen in on it, through the demodulator. Not good for me because I need the PC for weather data processing ..... :(Has anyone come across a similar problem (probably not, because most of you use 200mhz systems by now<G>)? I'd be greatful if anyone can share some ideas on how to improve this situation. Being that I am in a condo environment, I just can't-put-the-antenna-outside type thing, you know. Frustrating as hell, huh? They just had to put this datastream on 142.925.

Thanks,
Jason

Please presesnt the "well documentated" proof of waht you are
referring to.

I have NEVER done, or been caught at, the things you mention above.

You obviously have me confused with Bill who has done things you
mention & been caught & it is documented!

Channel Master Monitenna 5095A all band scanner antenna with mast, bracket and coax in sealed original box. $40 including shipping.

I bought this antenna from AES a year ago for $50 and decided to put up a discone for TX capability. I received the antenna and never opened the box.

I saw a ground rod made of galvanized rebar at Home Depot yesterday ---
life expectancy in the soil? Probably not very long - a few years at best
anywhere it rains if it isn't scratched going in. How can the code allow
that stuff?

From experiences--- the ground is a drain and a sink-- the ground needs to
remove any buildup and it also needs to take all you can give and
dump/spread it reliably.

We sited our portable 5 megawatt/140db ampl. radars using four copper rods
8 feet long, and dry soil we went 16 feet deep, with mesh ground strap in a
spider array. Kept the RF down for us - the waveguides were monel
gasketed, though. Our diesel generator used just one rod.

When siting electrical installations and sizing fusing, we expect not less
than 4000 amps to the rod using very very fast fuses. Most residential
stuff is in the 25,000-50,000 amp range (a lot of commercial hits up to
200,000 amps.) That kind of amps before shutdown brings a lot of heat to
one point and can smoke a poor/corroded connection and send the current
looking for a new path - read "BIG arc with lights still in the eyes ten
minutes later, ringing ears, and hot metal blown all over-- and a hole
where the corroded connector was.."

I guess I always expected the ground fault to smoke any bad connection, and
installed "corrosion resistant" accordingly.

just an observation....

Pure and undiluted marketing at its finest. Thus proving that some marketing people have no basis in reality or truth. Another fine example of total lack of reality is a listing of a three inch long cell phone antenna in last years radio shit shack catalog. The description says "small yet powerful". Obviously this was written by some one who had no technical knowledge in any way shape nor form and decided to make up a description out of thin air regardless of how dishonest, thoughtless, and/or brain dead it really is. Always remember Never trust a snake oil salesman, especially when he works for the shit shack.

I'll add a 4th (with a disclaimer!). You can use
hardware/software available at http://ns1.qsl.net/ka2pyj/
to "program" the channels via the computer. It does NOT
control the scanner, merely makes channel programming
much easier. I plan on building one of these interfaces
shortly. If anyone has adapted one of these for use
with the PRO-2026 and has any hints not mentioned at
the above website, please fill me in!

Thanks, Robert

From http://ns1.qsl.net/ka2pyj/

PROgramit is a one-way interface from your computer to your
scanner. Its purpose is to simplify the task of programming
the memories in your scanner. Once this task is complete,
the interface is removed.

From http://www.optoelectronics.com/optoscan98.htm

The OptoScan 456/535 allow for complete computer
control of the receiver. They will not only
tune the radio, but increase the scanning
speed up to 80 channels per second. They
also provide decoding of CTCSS, DCS,
and DTMF.

Cost is the answer. You need a wider bandwidth receiver for just 20 MHz.
Not worth doing for the cost of manufacturing the scanner. Would you be
willing to pay for the feature?

Regards

Ed

> Help!!!!
>
> Thanks.

Sure there is! Take a ten foot long piece of plain old electrical
conduit and begin to remove chunks of soil by ramming the pipe into the
dirt that you want taken out. Each time or two that you remove a few
inches of dirt, slam the pipe into something to dislodge the dirt and
then continue.

At first, youll think youre not going anywhere, but soon, youll see
real progress. As you move deeper, the soil should be easier to remove
too.

I use this process all the time. It works well. There are two sizes of
pipe. Get the larger 1.25 inch or so diameter. It will withstand the
abuse of slapping it into a fence post etc to shake loose the soil.

If you prewet the ground, you MAY find the soil is too hard to slap
loose out of the pipe. However, if your soil is so dry that it will not
come out in core looking sections, then you may need to add water.

Keep in mind that you wont need to dig the hole 10 feet. Maybe only five
feet so that you can stand on a ladder and nail the ground rod in the
remaining five feet.

Hope this helps!

Mark

According to ARRL, you need to get those ground rods down really deep
to get into the water table for a serious RF ground. Dont expect a rod
under a couple of feet of soil to do the same job. It wont.

3854. Politicians: get a Life!

Newsgroup: rec.radio.scanner
Date: 1998-07-28 00:00:00 UTC
From: nyceguy@jps.net
Message-ID: <35be2224.901779480@news.jps.net>
Source record: 150545

Why is it that these whining yuppies have this need to complain about our hobby? I mean, its not like where on the street dealing crack and shooting innocent people for wearing a certain colors or having ganster tires on their car. I think they shoud concentrate on gangs, child molesters, murderers, etc before attacking us scanner buffs. If people do not want their "transmissions" listened to, then they need to seek equipment that will not allow monitoring. radio waves where meant to be monitored. Asisde from using a scanner to divert Police in commission of a crime, the politicians need to gets their head of their butts and focus on REAL crime. As ofthe rest of us, SCAN ON!!!

Kevin

It helps to ask yourself if you are trying to make an RF ground plane OR a safety ground OR both.

A great RF ground plane can be insulated from the Earth.
An excellent safety ground can be marginal for RF.

Generally speaking, if you work with vertical radiators you need a real ground plane.

If you have antennas mounted on a tower...you're looking for a safety ground. Usually that's a couple of good ground rods and careful bonding to the electric power neutral (accessed at the service entrance).

The exception that comes to mind.... is if you are playing games with vertical angle radiation and horizontally polarized yagis. Then some chicken wire on the roof will do. And a crank up tower ;-)

Source record: 150572

Found his while looking for something else...

```
========================================
Uniden SportCat 150 Undocumented Features
========================================

I found an undocumented Uniden Sportcat 150 feature (Great scanner by
the way). Before you turn it on press and hold the WX and L/O keys.
Turn it on and it shows the voltage left in the battery. When you are
in this mode pressing the number keys brings up numbers you can adjust.
Press the DC/Bank button does things too. If anyone knows what this is
please Email me at afowler@juno.com. I tried Uniden customer support.
It is always busy.

With the SportCat 150 the battery icon appears after holding the L\O and
WX keys and turning the scanner on. If I remember correctly, if the
scanner is plugged in it should read 1.72. If you do not have it plugged
in it should read 1.66 if it is fully charged. If your scanner reads 1.45
or lower, your battery is running extremly low and needs recharging.

Power on with...

WX and L/O -View voltage left in battery.
2, 9, MAN -Clears all memories.
2, 9, L/O -Illumination Diagnostic.
2, 9, PRI - Puts test freqs in channels 1-21.
2, 9, SCAN - Puts in more test freqs.

I think that this is not the end. The WX and L/O feature has more
options that could be usefull. Let's all get our heads together and
find some more test modes.

--This was compiled by EugeneD@aol.com on 7\15\97.
--Please send me any more info that you may find.

OK buckwheat, this should be promising. If you are so certain that Bill and I are the same person, then PROVE IT. Here's the deal:
You have 24 hours to provide such proof. If you can conclusively prove that I am indeed Bill Cheek then I will leave this newsgroup and never return. But, if you can't prove it, YOU have to leave. Furthermore, if you cannot provide this proof I expect you to post a full apology to myself and Bill as your final message prior to your departure.
So whaddya say bozo? Do we have a bet, or are you going to puss out as usual? Stand up and be a man for once in your God forsaken life!
-Phil

<----End Message----->

There it is in all it's glory. Since you didn't see it (yeah right...) I'll even go so far as to give you ANOTHER 24 hours to put up or shut up, oh flatulent one. How's that for square?

>No, but if YOU feel the NEED, you can call me. You know the number.

Still denying that you called me names over the phone, huh? That's too bad. I thought maybe you were finally going to be a man and admit it. Tell me, that pay phone you used, was it in front of the Pink Cowboy Club or the Blue Oyster bar? You know, if you'd just come out of the closet, you might make

a few real friends. Or does your therapist recommend frequent escapes from reality? Hell with it. I don't care.

Ya friggin loon,
-Phil

From: Pro43
Message-ID: <19970520114800.HAA27734@ladder02.news.aol.com>

Ive found a way to power the sportcat(SC) with a standard 9 volt alkaline battery.The hardest part is finding a plug similar to the battery plug.I took one from an old codless phone battery.I had to do a little trimming but it fits great.Parts needed:1- plug to fit battery input in sportcat with leads,1-9 v battery connector with leads and 1-7805 5 volt regulator.Connect the black lead from the SC battery plug to the black lead of the 9v
battery connectorthen solder them to the center(ground) leg of the 7805 regulator.Solder the 9v connectors red lead to the input leg of the 7805.Solder the red lead of SC battery plug to the output leg of the 7805.I used hot melt glue to insulate the solder connections.Plug the new adaptor into the SC battery connector and plug the other end to a 9v battery and youre ready to roll.I dont know how long it lasts but,when your on the road its easy to find another 9v at any mini mart.Ira

Bill, that actually depends. In a Tandy owned store
you are usually right. In private owned store
(most common in the midwest US) you probably
are wrong.

i have a RS pro 2006 for sale. It is in daily use for mil air and works quite well, the display is very dim though.

I have the box, manual and the whip that came with it.

These are sought after radios- it has the full cell mod and speedup mod.

I would like to get $225 for it, and a mimimal shipping charge.

thank you,
phil palln@clemson.edu :wq

Does anyone know if it is ok to plug the Uniden SC-150 into the power outlet in the car? If so, what voltage would be necessary to run it?

Thanks.
Evan (platt@bus.utexas.edu)

The problem with them for me is censorship, I just don't like it, even
if the one doing it is me! Everyone is entitled an opinion, whether
it's right or wrong, that's the beauty of the usenet. It's very easy
to not read messages that offend you without the use of filters-every
newsreader around had an option to see the subject line before reading
and most definitely a next key!

>I'm not taking any sides here, but why don't you set the example and apply
>your own filter to him, and just drop this b.s.?

Why filter him, the thought of newbee's reading some of the crap this
guy has spewed onto the net unchallenged makes me sick!

>Or maybe you enjoy this sort of thing? Your call, but people in glass
>houses.... I think you know what I mean.

To a certain extent everyone loves this kind of crap, America thrives
on it! We need to have something to break up the monotony of 50
requests for cell frequency restorations in sc150's and do you have
frequencies for my little stain of a town!
The windows in my house are pretty clean, how about yours?

>Food for thought.

Ummm...Food :)

http://www.independent-power.com/links1.html

Here you will find a variety of links to different photovoltaic sites
and suppliers.

On my roof I have three 10 watt 18 volt panels that charge a pair of
regular lead-acid car batteries located in a cooler on the side of my
house. They power all of my radio equipment, with LOTS of reserve, I
predict if the sun went out tomorrow my radios would still be going
when I froze to death! I also have a car cigarette lighter adaptor
from magnavox I got at home depot for $8 that can be used to charge
the nicads in my handhelds from it. This is overkill for what you
want, but smaller PV's are available for any application. Good luck

I was told the audio is compressed and digitized and transmitted using
Motorola's Flex format, like other newer digital pagers.
They are in 929-932 MHz range. Look at the label on your
pager that has the serial number and cap code, it should also list the
frequency beginning with a F (like F152.240 or F931.4375)

3893. The Wizard of Meghertz

Newsgroup: rec.radio.scanner
Date: 1998-07-28 00:00:00 UTC
From: Phil Smalley <psmalley@mail.hac.com>
Message-ID: <6pld8o$3ko@hacgate2.hac.com>
Source record: 150604

Once upon a time, there was a little girl named Dorothy (and her little dog Toto) who got sucked up into a tornado and ended up in the Land of Megahertz.

They were instructed to go to the Wizard of Megahertz who surely could help them find their way back home.

So the started down the Yellow Brick Road towards a giant Emerald antenna farm way off in the distance. On the way they met a scarecrow dressed in a pink leather cowboy outfit.

"That's odd," she said to Toto. "Who would dress a scarecrow up like that?"

The scarecrow lept out into the road in front of the amazed pair. "You can walk!" she exclaimed.

"Oh yeth, and I can talk too! Oh jutht look at yourself, tsk,tsk, what a meth!" said the scarecrow as he busily went about straightening her outfit and applying makeup he had in a pink saddlebag.

"Who are you?" she asked.

"My nameth John, thweetheart. Whath yourth" he gushed, prancing about on tiptoes, inspecting his work.

"It's Dorothy." she replied, "and why are you acting like that?"

"Oh honey, you can't tell? I'm tho gay I thcare mythelf! Tho, where ya goin thweetcheeks?"

"I'm going to see the Wizard of Megahertz so I can go home!" she said eagerly.

"The Wizard of Megaherthz!" he exclaimed. "My, what a burly, burly man! Do you think I could get him to give me a brain? I could *certainly* make it worth hith while..." he said with a wink.

"You're welcome to come along," she said.

So the three of them headed down the road, joined later by Stuart, the Cowardly Lion and Peter, the Tin Forger.

They entered the control building at the top of the mountain and approached Bill, the Wizard of Megahertz, who was busily repairing several Pro 2006 radios.

"Excuse me sir," said Dorothy, timidly

"Go away" said The Wizard.

"Allow me" said the scarecrow. He approached the workbench. "Hey, big fella.."

"I SAID GO AWAY!!!" boomed the wizard.He turned to glare at the people disturbing him. Then he began to smile. Then giggle, Then snicker. Soon, he was laughing so hard that tears were rolling down his face.

"Little girl, WHERE did you find such a bunch of RIDICULOUS BUFFOONS? BWAAHAHAHAHAHA!!!!!"

"I don't know, they just... followed me here." she replied.

"Yes, he said, as he wiped a tear, "hee, hee...They do that to everyone." He turned towards the scarecrow and his friends. "Go on, weirdlings. Scat! Shoo! Scram!" He began throwing his gigantic shoes at them, hitting them square in the rump as they ran.

"You'll be thorry for thith!!!" shouted the scarecrow as he pranced out the door. "You'll regret the day you refuthed to give me my brain!"

The wizard held up his giant 13EE boot. "I got your BRAIN right HERE!" he shouted, as he threw the boot at the scarecrow, knocking him out the window as he squealed in pain.

"Now, little girl", he said. Just press Man+2+9 and turn on this scanner 3 times and say "Theres no place like home" and you'll go right back home where you belong.

"Thank you so much, Mr Wizard." she said gratefully.

The wizard turned to look out his window at the pathetic trio walking back down the hill, rubbing their butts and whining. He sat back in his big chair and smiled.

"Call me Bill." he said.

THE END

;-)

All you need is a lighter adapter which has the correct output voltage and amps and the right size plug and polarity. If you look at the back of the Uniden charger that came with the SC-150, it will tell you what you need. I *think* its 6 VDC as 1200 MAH and the collar of the plug is negative - *BUT* I'm probably remembering it a bit wrong, so check the adapter for the correct info. I imagine you can get a car adapter to fit your needs at Radio Shack.

I've had an SC-150 for about 3 months as my first scanner - like it a lot but wish I'd bought one with more channels and a true limit search rather than a band search. I'd even asked an expert, but then disregarded his (very sound) advice base on cost. Sigh....

3900. Bearcat 101 Abnormality

Newsgroup: rec.radio.scanner
Date: 1998-07-28 00:00:00 UTC
From: nospamwbowery@bright.net
Message-ID: <6plgbs$69d$1@cletus.bright.net>
Source record: 150611

Hello, all....

I recently purchased an old binary-programmable Electra Bearcat 101 scanner, which is in good shape and works fine with one exception: After the radio has

been on for a while, channel 3 is eliminated from the scan cycle. In fact, nothing can convince this radio that channel 3 is there at all - you can't even step manually to channel 3, because the radio jumps from channel 2 to channel 4.

I thought the channel 3 lockout/programming switch may be the culprit, but since I can use the switch to program frequencies into the radio even after the problem occurs, the switch probably isn't the cause.

Could this be a bad trace or cold solder joint that only shows up when the board heats up? I don't see any bad solder joints (but that doesn't mean there isn't any!)

All suggestions welcome!

Thanks....

Warren Bowery

#2 Wish, alphanumeric display.
#3 Wish, computer connectivity.

This weekend, I was searching the Internet and found a couple places that sell the Relm MS-200 which has all the above wishes plus DCS tones. It appears to have a simpler display than Bearcat 895XLT. Unfortunately the 895XLT doesn't have alpha-numeric display. I could go with the more expensive 9000XLT with CTCSS board, but it doesn't have the computer connectivity. I haven't heard much about Relm scanners. I've only seen Bearcat and Radio Shack scanners in most of the stores I've been to. If anyone has any info that could persuade me for or against a Relm, please let me know. The only product I've used from Relm is a piece of crap 16-Channel VHF mobile transceiver, that finally bit it for the last time. If Relm is of the same or better quality as Radio Shack's scanners, I think I'll buy it. Anyone know how many characters the MS-200 can display?

I have the above 2 listed items for sale.

The CB radio is only about a year old, and in great shape. (not much else to be said, ask if you have questions. (Asking $100) shipping included.

The power supply is a 30V/5A variable supply made by Farnell Insturments Ltd. Mod # L30/5 this unit is HEAVY (buyer must pay shipping) about 15 lbs. (asking $50)

E-mail me at above address (remove obvoius anti-spam tag) as I rarley make it to the news groups.

Serious Inquiries only.

3904. Car's Radio antenna for scanner

I've seen some places that sell a tap for the scanner using your standard car's AM/FM antenna. Anyone have any experience with them? Is the signal strength any better or worse than other antennas? I've seen a police car that had it's standard AM/FM antenna replaced with a scanner antenna with loaded coils, but I haven't been able to find anything like that through my Internet searches.

> from my PV system.

Well, he can answer for his while I do for mine. :-)

I've a similar arrangement and live in an apartment. My gel cell (80ah)
powers the desktop gear directly and I use a sine-wave inverter for other
loads. I happen to think very highly of Exeltech. (Note that 80ah won't
run a computer for long, but that's not what I use it for -- this is
for radio gear and portable stuff in case of emergencies.)

One of these arrangements will break the bank if you don't learn how to
buy this stuff. I paid $15 for the gel-cell battery at a hamfest. The
seller services UPS's for life-critical apps and they replace the
batteries whether they need to or not. This one is in superb shape.

Also, some PV panel manufacturers will sell factory seconds or "blems"
at a much lower cost than usual. One of my panels should have been rated
for 50 watts but contamination made the cells in it good for only 38. I
paid about 1/3 the price for a "good" 38 watt panel.

Don't skimp at the inverter or charge controller. I bought a pulse-width
charge controller which also spec'd out what kind of RF interference it
would generate. It's very "rf-quiet." The inverter, which is only used
for heavy loads, generates a pure sine wave. I don't like the so-called
"modified sine-wave" -- really modified square wave inverters. They're
cheap but can do real damage to some equipment and they're less efficient
than their specifications would have you believe. You'll match the specs
for a modified sine-wave inverter only if you're running incandescent
lamps off it.

Brands: I'm just a satisfied customer:
Inverter: Exeltech
Chg Ctrller: Morningstar
Battery: Hamfest :-)
PV panels: Solec (factory seconds)
Fuse Panels: Ham equip store or alternative energy store.
(Don't even THINK of doing without fuses!)

Sources: Again, just a satisfied customer.

Backwoods solar: fuse panels, charge ctrllers, inverters, good catalog,
honest, very good prices.
Alternatve energy engineering: factory second panels
Jade mountain: factory second panels

(The last two can be much pricier than Backwoods on "new" gear, but
Backwoods won't sell factory second panels. Get all of their catalogs.)

>What's the main differences between these two interfaces?
>
>Thanks!
>
>Charles
>

The PROgramit interface is primarily a "button pusher". The computer is able to send info down it and the interface pushes each one of the buttons similar to what you would do to program the scanner. It is mainly designed only to program the channels, freqs, etc. into the scanner's memory. The interface cannot allow you to get any freqs that were not previously available. There is another feature or module that you can add so you can actually control the scanner via infrared remote control. You can use that multi-purpose remote control to work the scanner from across the room...but it still is basically doing the "button pushing". Later there will be a RF module added which might interest ppl that have their scanners hooked up for mobile. You can program your scanner via a computer while the car is parked outside or a few hundred feet away.

The OS535 is a whole new interface. It does all of the functions that the scanner's CPU can do, but the computer is what tells the interface what is going to happen. Actually if you remove the front of the Pro-2035/2042 and take away the CPU board and keyboard, you can operate the scanner just with the OS535. When the OS535 is not active, the scanner's CPU, keyboard and memory is in use. All of the commands from the scanner's CPU is bypassed through the OS535 and allows normal operation of the scanner. When the OS535 is active, it blocks the functions from the scanner's CPU from getting to the RF/Linear board of the scanner. The OS535 sends out its own codes to the PLL circuits, bandpass filters, etc. It also receives info from the RF/Linear board to tell if the squech has been broken, signal strength, etc. The OS535 also has audio/subaudio detection circuitry to decode DTMF, PL, etc. tones. The OS535 is not capable of downloading freqs/channel info to be programmed into the scanner's memory and the OS535 cannot use the scanner's memory. The computer sends frequency info to the OS535, the OS535 inturn switches to the appropriate BPF and tunes the PLL to a frequency to get the proper IF that the scanner needs. The OS535 then checks to see if the squelch is broken, if so, then the OS535 switches in the audio circuitry, checks signal strength of the RF, listens for

any audio or subaudio tones and reports all this back to the computer.

TO ANSWER A PREVIOUS QUESTION THAT WAS SENT TO ME:
To duplicate what the OS535 is capable of doing, you would need to capture the data sent to the PLL circuitry, the BPFs and other circuits on the RF/Linear board that are controlled via the scanner's CPU. You would then have to do the math and work out the PLL codes using the spec sheets for the proper ICs. You could build the audio detection circuitry and the A/D converter for the signal strength. This could all be accomplished by using Boondog's ISA card at http://www.boondog.com/ or various other homebrew contraptions.

>Anyone know why plain 'ol FM radio stations are blocked from scanners?

Matt,

It's not really blocked, several of the high-end scanners have the 88-108 FM band included, such as the Uniden 3000XLT, AOR 8000, etc. Like the 225-400MHz military airband, whether or not to include it is a marketing decision. Every new capability increases the cost. If you want the FM broadcast band you have to pay for it.

>a concept for you?
>
I gotta go with Eric on this one myself. I mean, how else could the calls have been obtained? Even if the guy traced down every caller he monitored and got their permission to print the call, he still broke the law. He intercepted (illegal today) AND divulged information not intended for him (Illegal since the 1930's), regardless of how he did it.

So what happens? The FCC fines him and maybe even locks him up for a while, but he still makes a killing on the book, and Billy Tauzin and friends have an even better case to present to Congress as to why our scanners should be banned. We've been sold out, folks! I think Eric's description of this cretin fits perfectly.

The last thing I intend to do is buy that book, and read it for myself. After all, that's what the author is banking on! Literally!

> That's pretty funny!
> Who is this Mackey character?

A cartooon character in a sense, not unlike
Wile E. Coyote, a type of masochist who
thrives on deep and profound pain.

An electronic warfare practitioner, he's been
wreaking havoc and consternation on the
denizens of this newsgroup for three years.
He fancies itself as a great benefactor to the
newsgroup; a messiah of some sort. I say
"itself", because it's a classic hermaphrodite
with a number of very serious mental and
physical disorders, chief of which is the
world's first documented case of a pseudo-female
brain inside a psuedo-male cranial cavity.

> Does he know anything about Scanners?

No, of course not. It prefers a world of
circular logic where sense and sensibility;
rhyme and reason; and linear logic are strangers.

It doesn't know its arse from any of the holes in
its face.....and to paraphrase what someone else
said today,.... neither do we. You can't tell
by looking, its mouth from its sweet patooty.

It knows nothing of scanners aside from the
"flatbed" type....and then only because "flat"
and "bed" are music to its ears.

It's a pitiful, warped, perverted life form that's
not accepted by any other life-form community on
the planet......a pariah, if you will....a
minuscule, pathetic, life support system for an
as yet to be determined perverse DNA combinatorial
scheme.

Look at it this way.....according to some other
testimony on this newsgroup, Mackey is said to
have suck-started a Harley-Davidson motorcycle.

Need I say more?

Can't say about shortwave but RG-6 works great for scanners. Just make sure you get good quality cable, not the cheap stuff the cable company uses. Belden makes a good RG-6. I've been using it for years and I love it. Small and easy to work with and less loss than RG-58 & RG-8.

Hope this helps.

Mike

There are basically two approaches already on the market: 1) computer controlled scanner like some of the AORs and Icoms; 2) scanners like some Radio Shacks that can be adapted with an Optoelectronics interface.

The scanning capability is more a matter of the software than the hardware. There is a ton of info on computer controlled scanning--seek and ye shall find on the web.

> "all in one"), my guess is that you may be severly disappointed in it's
> performance.

I doubt the intended user would be severely disappointed. It is my impressions they have never even used such a radio. Owning one of each, you are in the position to compare them. And as most know, you can't compare a wide-range handheld of about one fifth the size to a dedicated, in this case HF, radio.

The new user needs to be aware that if they wish to monitor certain agencies in certain parts of the spectrum exclusively, then a receiver designed for that spectrum will be most efficient and the best performer. If they are new and want to experience everything, with the goal being to learn what it is they want to listen to, then one of the portable wide range receivers such as the R10, X10, AR8000B, etc. are a great way to do this. Especially when you consider their price and all that you gain access to.

Obviously, fitting all of this technology into a small package will raise its price, as well as compromise performance compared to a dedicated band radio. But to the new user, it gives them the entire world in their hands to experiment with and build the experience they will use to make future radio purchases.

If these experiences dictate the need for top performance on HF, then a dedicated HF radio can be purchased but not before being tortured by deciding between the $500, $1000 and $2000 models available.

3926. ICOM R1 mods

Newsgroup: rec.radio.scanner
Date: 1998-07-28 00:00:00 UTC
From: Nigel Hales <selah@ozemail.com.au>
Message-ID: <01bdba23$d96d90e0$29b807cb@star>
Source record: 150637

Hi all,

I am looking for mods to the R1 scanner

I have been informed of a mod to increase the channels from 100 to 200 from
a contact in the USA

also looking for all other info regarding this scanner

cheers.....selah@ozemail.com.au

Thanks for the references Robert. The AR8000B is the US only
model of the AR8000 which is cell blocked and unrestorable
via the typical computer EEPROM bandplan programming.

I have a BC855xlt with a date code of 0AID. This unit uses a controller marked UC-1376. The layout of his board is different than the info printed on the net. There are no component markings on the board and the notch is on the right-hand side. However, there are four zero ohm jumpers.

Does anyone have any of the following:
a) mod info on this unit
b) specs on the controller chip
c) any keyboard tricks

Thanks, Joe

>>> It is not uncommon for RS coax to sit on the hook in display next to a
>>> window a year or two.

The real funny thing is that coaxial cable
does not sell itself from display - it's
something you want and know you want, and
almost always it's in the back room on a
spindle, or packaged and boxed in shorter
lengths in the back of the store off the
main sales floor....never in the window.

So what Radio Schloque in its right mind
would put coax in a window in the first place?

Mackey was an utter imbecilic nincompoop for
ever suggesting that scenario. What an idiot.
But sure as tootin, you pasted the PROOF right
across his syphiletic-lesioned lips.

Way to go!

;-)

What's the main differences between these two interfaces?

Thanks!

Charles

I've never owned a scanner before, just bought it last weekend (found it's on sale). Can't compare since this is my first, all I can say is : great fun! I'm quite sure of the way I organize the channels in the Banks is dumb, but I know I'll learn & improve from now :-)

With the rather limited & confusing manual, I have a few questions hope the NG can help:

1. how can I turn-off a Bank? Manual says I can do it, but doesn't explain how.

2. I use Bank 1 for all those Trunk channels (also with IDs), Bank 2&3 for those <800 mhz channels, Bank 4-9 are empty, and I stored those "Fed Emergency/Rescue" on Bank 10. But when its turned on and is in "non-Trunk" mode, I see there are dots under Bank 1, 2, 3, 8 & 9. I believe it means these are active banks, but why 8 & 9 (which are empty), and why not Bank 10?

3. It is supposed to scan thru Bank 1 to 10 automatically once switched "on"? or do I have to manually enter "271" (e.g. for Bank 10) and enter "search"?

4. I believe the "lowest" frequency in Pro-90 is still higher than the CB bands, is there other higher CB frequncies that are in use and can be received by Pro-90?

5. Is it legal in CA to drive with a mobile scanner (even if it's "off")?

6. Pls comment on the way I store the channels, pls tell me how can I improve:

Bank 1: Trunk frequencies for SantaClara & Alameda counties (ID gp 1= SC police, gp 2= SC fire, Gp 3 = Alameda police, Gp 4 = Alameda Fire)

bank 2: Non-trunk frequencies for San Jose & MountainView police
bank 3: Non-trunk frequencies for S.J. & M.V. Fire depts.
bank 10: all those Fed emergency & rescure frequencies.

Thank you.

John

I managed to plug in the wrong power adapter (24V Motorola Charger - the damn thing looked the same and the plug fit perfectly!) into my battery, and now it doesn't work. I recharged the battery with the correct power adapter, and the scanner worked for a while, then stopped. I'm hoping that I just fried the battery. Is there any way the wrong power adapter could go through the battery and fry the unit? I had it pluged in about 15-20 min before I realized the mistake.

I just ordered a new battery from Uniden, and I'm hoping for the best. This 200XLT is pre-ban vintage and includes much of the 800MHz frequency. I'm afraid if I send it in for repair they would modify it (to make it ban compatible), even though they assured me that if it was made before 1993 they would leave it alone.

Any input would be helpful.

BTW: They were out of the "regular" battery ($26.48) but they had another battery on hand that works with this unit for $36.15, does that make any sense? I mean, if this battery was made for another unit, how will it work with mine?

Thanks,

Gus K.

> Has anyone ever used the Iomega Buz, if so any comments?
>
> Dean
Hello Dean.

"Buz" is great, It has inputs and outputs in both composite and S-VHS, plus stereo audio ins and outs. You also get a scsi adaptor that lets you add other components

The software, "Videowave SE", is weak. Upgrade to the full version for much better performance. MGI will sell you the Buz upgrade for $50.00 plus shipping.

The full version of "Videowave" is great. Capture the Video, (I haven't lost a frame yet.) Drag the clips to the story board, add credits, transitions, music, and narration, then press produce. The project is then compiled into a single AVI, Quicktime, or M-peg file that can be outputed back to tape, CD or the internet.

If you desire to create elaborate soundtracks, you should invest in a program called "Sound Forge XP" by Sonic Foundry. It lets you edit and arrange AVI audio with frame accuracy. It also allows you to add sound effects, fades cross fade, etc. "Sound Forge XP is also inexpensive $40.00.

Hope this helps,
Rob

I don't personally know of any. Maybe the freqs are so low that a
normal scanner antenna would have trouble picking them up? I dunno.

Several people whom have placed bids on this have requested me to post
the most current bid price so here it is. I will post this once per day
for all to see until Friday July 31 at 5:00pm when I will close all
bidding.

I am not a business, just thought that this would be a good way to sell
my item.

Current Highest Bid is $35+SHIPPING
Current Lowest Bid is $26+SHIPPING
Number of bids received are 2

Original AD POSTED ON MONDAY JULY 27 AT 9:00PM EST:

I have for sale a Passport Radar Detector with suction cup mount and
cig. lighter adapter.

This works 100% and will sell to the person with the highest bid.
Bidding starts at $25+shipping. Whomever offers the highest amount by
Friday July 31 will be the one who will take it.

I am selling this for my brother who lives in VA and because it is not
legal, he chooses not to take the risk and use it there.

Send your bids to:

> how.

It's in there. There's a section titled "Special Features" under which
is a sub-section title "Turning Channel-Storage Banks On and Off".
Basically, once you start scanning, you press the number key of the
bank you want to enable or disable from the scanning sequence.

> 2. I use Bank 1 for all those Trunk channels (also with IDs), Bank 2&3 for
> those <800 mhz channels, Bank 4-9 are empty, and I stored those "Fed

> 10?

Yes, the lines under the numbers are those banks which have been
enabled.
I believe that from the factory, all banks come enabled. So regardless
of whether they are empty or not, they can still be enabled. As for
bank 10, I can only assume that you must have pressed the '0' key while
scanning which disabled bank 10.

> 3. It is supposed to scan thru Bank 1 to 10 automatically once switched
> "on"? or do I have to manually enter "271" (e.g. for Bank 10) and enter
> "search"?

It will scan the last set of banks that were left enabled. Once scaning
is started, you can select a different set of banks by pressing the
respective number keys.

> 4. I believe the "lowest" frequency in Pro-90 is still higher than the CB
> bands, is there other higher CB frequncies that are in use and can be
> received by Pro-90?

CB is 26.965 - 27.405MHz so you're outta luck.

> 5. Is it legal in CA to drive with a mobile scanner (even if it's "off")?

On and off won't matter to an officer if it's taboo. He'll assume you had it on and only recently turned it off to try and avoid his wrath in places where it is illegal.

As for legality, stop by Todd Sherman's great page

http://www.afn.org/~afn09444/scanlaws/

and ALWAYS be aware that cities and smaller municipalities can make their own rules as they see fit...so discretion is called for at all times.

> 6. Pls comment on the way I store the channels, pls tell me how can I

Seems perfectly fine. People typically organize on a bank by bank basis based on agency or by region...depending on what method is most efficient for them. If you stay at home or in the local area, by agency works well. If you travel a lot, you might consider the regional approach

Since you are a beginner, I'll invite you to stop by my site listed below and to make use of the New Scanner User FAQ listed below as well. Happy monitoring!

One is an apple and the other is a bowling ball. The essential difference is that the Opto controls the scanner; the Programit programs the scanner. Everything you need to know can be found at www.optoelectronics.com and www.qsl.net/ka2pyj/index.html.

I remember that rowe. Richard Kendrick hammered him for months trying to get the clown to post proof of his "degree".

Then Mackey's "circular reasoning" conveniently kicked in.

I think Mackey regrets trying to fly that lie.

Have you considered buying a solar panel and either mounting it on your roof or keeping one handy all setup? I have (2) 22watt solar panels on the roof of my house wired up into a bank of 4 marine sealed 12volt gel cells that are 120ah each all hooked up in par. circuit. This not only keeps my 12volt source charged at all times for emergency's but I use all my ham gear, charging handhelds and my computer system off of this system. It has proven to be very stable and I do not rely on grid power for any of these items for any time. I am completely unaffected by my local power company. I have had this system running now for 5 years and love it.

Good sources for batteries and solar panels are your local marine store or several mail order houses. You don't need such an elaborate setup such as mine. One 5w solar panel, and a charging regulator and maybe a 50amp hour marine gel cell would do you fine. Any questions please feel free to email me.

What's it to you? Are you helpless? Victimized
by that mangy, slovenly, misbehaved computer of
yours? Can't make it do what you want?

Take a huge cudgel and beat the living shit out
of it and demand that it perform to your specs.
FORCE it to not mistreat you; make it respect you
and be nice to you.

Don't take any crap off that computer of yours!
It can be....or should be....totally under your
control.............

Which, unfortunately for you, I am not, and
never will be.

So your choice is to throttle that wayward computer
of yours and learn how to use and control it. Life
will take on a rosy glow when you do.

You won't be such a poor, helpless, little victim,
anymore.

Understand?

No, I didn't think so. But I was obliged to try....

;-)

No, I know exactly what I am saying. Let me outline it for you ONCE more:

It is:
- illegal to listen to cordless phones
- illegal to have cordless phone freqs programmed
- illegal to use evidence in court recorded using scanner tuned into
cordless phones

Put more simply for your simple mind. I'll bet you don't even know how to
cry...

I don't know more than Mackey?

Oh, and what does attitude have to do with intelligence? However, to reverse your theory, some of the most intelligent people had/have a very bad attitude (Einstein, Robin Williams, Thomas Hobbes, John Updike, among others).

Sure ... then I will ask you, what's a "mutex"? I will bet you have no idea. Or how about a "semophore", "pointer", etc...?

Prove my wrong. So far, you've only produced ONE article (which actually contained only an opinion, not a "fact"), so no one, including me, will believe you unless you produce proof.

"Proof? I ain't got no proof.
I don't need no proof. I don't
got to show you no stinking proof!"

3970. Niagara Falls, ON Fire Department

Newsgroup: rec.radio.scanner
Date: 1998-07-28 00:00:00 UTC
From: wcarc@itcanada.com
Message-ID: <35bd14c8.2697696@news.itcanada.com>
Source record: 150681

Good day all.
The Niagara Falls, Ontario, Canada Fire Department has changed their frequency.
Their call is XJF-300
Their old channels were:
F1 - 153.800
F2 - 153.770
F3 - 154.070

Now, it's
F1 - 150.545
F2 - 153.800
F3 - 153.770
F4 - 154.070

ALL dispatches for the non-volunteer areas (The city) is done on 150.545.
All dispatches for Station 5 and 5 (rural areas) are still done on 153.800

Another note:
The Niagara Region is going to be switching to a new system in the near future. There will be a central dispatch center in St. Catharines. They are not sure if it will be digital or not, but it will be trunking and it will be 800MHz. I am activley involved in the decision of digital or not, and believe me, they way myself and others have been wishing, it's gunna be digital.
Thanks
Mike

hehe.
In Canada, the only restricting laws are you cannot repeat what you
hear, and you cannot have a scanner with you while commiting a felony.
Other than that, ANY frequency is fair game. There even is no law
against decoding pagers!

That correct. There are some minor other differences but they
are strictly cosmetic.

> My question is this:
>
> I am buying this scanner not only to dabble and scan with, but also in
> the case of emergencies and power failures. How does one go about
> charging this battery without power? Has anyone found a solar powered
> charger that will work with this battery type on either of these
> models?

The PRO-90 will run for more than 8 hrs on a single pack
(4 pack of "AA" batts). The plug in wall charger is rated
at 12V 200mA. You could easily use a 12V sealed gell cell or
a much larger 12V battery to run the radio for WEEKS.
There are small Solar Panels capable of supplying this
low level current but a small gell cell is much more economical.
A 7 amp sealed lead acid battery (gell cell) is about $20.
Besides, do you need aux. power for more than a week?

> I'm considering foregoing both of these models for one that uses
> standard AA's that I can recharge via a solar recharger.

You can buy extra Uniden battery packs for these
models for $15-$18 each. Charge one of those on your solar
power source and simply swap it out as needed.

> PS: RS is selling the Pro 90 (trunktracker) this week for 219.00.
> Good deal?

Ask Radio Shack for the preferred customer coupon. It is
worth another $20 off that price ($199.00). That's what
I paid for my PRO-90 two weeks ago at Radio Shack. I have
yet to see any other source of a "new" Pro-90 or BC235XLT
come close. That's $45 cheaper than the Grove price. I
could buy 2 extra battery packs or 2 gell cells for that.
Something to consider...

> 3277.0 - National Guard, US Army - 9999.0, Coast Guard - 4048.5

> To the best of my knowledge, these two scanners won't cut it on these
> frequencies.

You're correct. The coverage for the Pro-90 & BC235XLT are limited
to 29-54, 108-174, 406-512, 806-956(minus cellular).

There are very few "do all" type radios. The ones that
exist tend to be very cost prohibitive. This is one
reason some of use by individual radios for the area
of coverage we are most interested in at the time.
So you have a choice. Drop a large chunk of change
initially and get a fancier radio, or buy a cheaper
one with less coverage, only to buy more radios later
to cover the missing pieces of the spectrum. :-)

> Also to the best of my knowledge, the ICOM R10

For info on this model, follow this link:
http://www.strongsignals.net/htm/revr10.htm

> and the AR8000B will.

Don't know about the "B" model. For info on the
AR8000, see http://www.strongsignals.net/htm/rev8000.htm

For the AR8200, see http://www.strongsignals.net/htm/imp8200.htm
Nice radio but at $600+, it had better be!

The NEC says that any ground connection which can carry mains fault
current or lightning currents must use an approved clamp (or be welded).
Since that applies to virtually any connection to a ground rod, because all
ground rods in a system are required to be interconnected, you need to use
an approved clamp. It may not work any better than the stainless clamp,
but it makes the electrical inspector happy, and it makes your insurance
company happy. Since approved clamps are cheap, there's no excuse
for not using them.

Icom IC-Q7a dual band mini transceiver for sale. This radio was purchased first week in July and has about 2 hrs use on it. Brand new, in box with accessories and manual. Will include original sales receipt. Yes, I was curious and just had to see and use one! Great size, great audio, but I have WAy too many radios to keep it....

$175.00 shipped to 48, COD is $5.00 extra

E-Mail if interested - NO TRADES

Well... uumm... no one has mentioned the other handheld trunk tracker
on the market. The Pro-90's little brother the Pro91 has 150 channels,
also trunk tracks, and will take your choice of 4 Nicads or 4 Alkaline
AA batteries. So, theoretically if u have enough Alkalines on supply
this is a supperior model for emergency use. Just a consideration. I
had one for a few days, but the channels were not enough for me, so I
returned it in favor of the pro-90, but for you it may be great. I got
it on sale for 179 with cupon. It is a great scanner if 150 channels
is enoough for u. Other than that it has all the same functions as the
pro90.

Stick with two rigs. I have an ICOM R-10 and a Yaesu FRG-8800 HF Receiver. The HF performance in the ICOM can't hold a candle to the performance of the Yaesu. If you get the ICOM (or probably any other "all in one"), my guess is that you may be severly disappointed in it's performance.

4002. STOP MACKEY AND CHEEK

Newsgroup: rec.radio.scanner
Date: 1998-07-28 00:00:00 UTC
From: Jim Wayda <jwayda@pacbell.net>
Message-ID: <35BD6071.4D0B1E2F@pacbell.net>
Source record: 150713

Not too long ago, this newsgroup was very informative and contained interesting
information regarding scanners. Then along came Mackey and Cheek. I suggest that a new
group be created called "alt.imbeciles.macky.cheek". Macky and Cheek can take their
feud to this newsgroup, and we can return to productive discussions regarding scanners.
Unfortunately. Macky and Cheek will probably not opt for this solution, since they are like
children and must be the center of attention. So, on to plan number 2:

Every time you see a disruptive post from Macky and Cheek (look at the headers to make sure
it came from them) forward a copy of the post to the postmaster of their ISP. For example,
to send e-mail to Cheek's ISP, address it to postmaster@san.rr.com. At the beginning of the
message, describe how the individual has been terrorizing this newsgroup. If enough people
follow this advise, the system administrators will solve the problem for us.

You have got to be kidding, now you want to change the topic of the
thread completely! Look up, what does it say? "Re: How to unscramble
cordless phones ?"...remember? It started with a guy with a theory
about inversion descrambling..if you don't go back and read it. When
you get to the part where you are wrong about someone giving out BAD
ADVICE, THEN and only THEN post a reply if your tears don't short out
your keyboard.

P.S. http://www.dejanews.com/home_ps.shtml

Do a search for author: jtonsa@* all the proof anyone could need!
If you really want, add topic: nazi hahaha

P.S.S. This will be my last reply to this horribly mutated thread.

I am at a different computer now, but I did see this message.

I program in Visual Basic for fun only (code is easy to upload to others,
and to convert to C++ and other languages).

The MAIN languages I do serious programming in is Delphi, Java, and C++. I
own Delphi 3.0, Microsoft Visual C++ 4.0 and Symantec Visual Cafe PDE (along
with VB5 and VB4, yes).

Also, I prefer to use Linux or UNIX, or a Macintosh. Since I don't have
these machines, I am using Win98.

The easiest way that I know to find some frequencies is to go to the internet at http://neon.ingenia.ca/~darkwing/tafl/ which is "Search the TAFL" (Technical & Administrative frequency list), then jump to the search form and enter the subject and area (Calgary). We unfortunately can't hear the police or fire departments as they have gone to digital, trunked transmissions. Hope this helps.

Don't bother canceling your this post. I got it, and it's already in my archive. Another herculean zit for your lying puss, you friggin' loon.

Don't let your ego get the best of you about your job giving you a psych test. Mcdonalds would probably request a polygraph just to let you clean the friggin' toilets.

And "State Certified Therapist!?!?" Listen up "Dr. Doolittle"; the only therapy you're qualified to administer is assurances to your pigs that you'll still respect them in the morning.

"State certified therapist" my ass. Don't you realize that "State Certifications" are public information? Don't you see why that lie won't work?

Of course you didn't, that's why you tried to fly this post.

Too late to cancel it though; I *got* it dirtbag. You're gonna see it again.

Another *lie* from the "Mind of Mackey".

ya friggin' loon.

4017. Re: Any Pro-25 mods?

Newsgroup: rec.radio.scanner

That area is occupied by some TV channels, 4,5,6. The channels 2 to 6 occupy the spectrum from 54 to 88 Mhz.

There are no known mods for the Pro 25, aside from obtaining an Australia model CPU and replacing the original to give analog cellular coverage. But even if you could do that(and it's not easy) cell mods are becoming more and more pointless with the advent of digital phone technology. In my area the analog traffic is dropping off really fast as the providers are offering free upgrades to digital to save bandwidth. If there is still analog cellular in your area, you can hear some of it by doing a limit search from 896 to 915 MHZ.

>spotting - would this work well?

I can't say how suitable this model would be for your hobby, but the Pro-90 is made by Uniden and is exactly the same as the equivalent Bearcat model. To reassure yourself do a DejaNews search or you visit Rich Wells' page (http://www.strongsignals.net/) and read his reviews. AFAIK, the only differences in the scanners themselves are a few cosmetic changes in the design of the case. Uniden had a better bundle on the included items (a charger and second battery pack thrown in with the scanner, I think), but the new lower price may make it worth your while to pick up the RS model instead. Especially if it's local and there's no S&H.

FWIW, I've got three RS scanners (Pro-60, Pro-64, and the Pro-90), and all of them perform just fine. And no, I have no special love of RS--I just have relatives who like to give me gift certificates. :-)

Yaesu and Kenwood make amateur radio transceivers only
but some people use them as "scanners" since they do
have some interesting features.

The scanner makers include Alinco, AOR, iCOM, Radio
Shack, RELM, Sony, Uniden, Welz, WiNRADiO and Yupiteru.

For more details, see my Manufacturers page :

Hi Ron,

I also use the Antenna Specialist splitter with great results. Here in the Colorado Springs area we have everything from vhf up to 800-900 mhz comms. I use to always run a Motorola whip but got a new car and didn't want any holes it yet, this splitter filled the bill. Good luck

So..... what you are saying... just so I have it correct, mind you..... is that if I don't come right out and say something you wrote is wrong then it must be right. Is that what you're saying John? Did someone grant me, and me alone, the power to determine what is fact and what is fiction for the rest of the world, and forget to tell me? Do you hang on every word I say, and live your life accordingly? Are you desperately neurotically imbalanced or something? Give it a rest, will ya?!

You friggin water weenie! (everyone else just calls you a LOON)

>It is always busy.

My SC-150B doesn't do any of the nifty power-on tricks listed. Is this
something that only works on SC-150s manufactured up through a certain
date or serial number?

Drop into your friendly library and read the Criminal Code (Not the Radio Act and Regulations) under privacy. It may not be enforced, but it sure is illegal to do, own etc. all sorts of monitoring related equipment and even parts.

Many Canadians, myself included for many years, read the Radio Regs and figured we can listen with impunity. Then someone handed me a copy of the Criminal Code and showed me the serious laws.

Like I said, we don't enforce them, but they exist.

Here are two helpful tips:

1. Search the low power business frequencies.

2. Look at the portable business radios they sell there. Those are
the models they use in the store.

Mackey only understands "curved" language,
thats because he operates on circular logic.

It would probably be an excercise in futility to send complaints to
parg.org. You'd be better off complaining to parg.org's upstream
provider which is teleport.com.

HAHAHAHAHAHAHAHAHAHA!!!!! This is *rich*!!! Bill has a degree (or two), so Mackey has to have a degree. Bill has a Commercial License, so Mackey has to have a commercial license. Bill runs his own server, so now we're supposed to believe that Mackey runs a server! Gimme a break!!

Do you REALLY expect us to believe this BS??

First off, Mackey uses WIN95 and Netscape v4.04. And he most likely wouldn't know HOW to use NT... Let alone a server!

Try using the "Subject" option in your filters, and filter out whatever
you'd like.

Most readers will block any subject line _containing_ (usually not matching)
the subjects you entered in the filters, which is a good thing.

Can't speak for Mr. Alexander, but I know I can:

You are nothing more than a flaming parasitic little troll. Even John Mackey thanks God that he is not as bad as you. You are ugly. Your appearance scares small children. You smell bad. Even flies cannot abide the stench. You are as dense as lead with half of the IQ and a tenth of the value. You are uneducated, ignorant, pedophilic and bolemic, and these are your good points. Pigs know more about scanning than you. You laugh at us, mock us and insult us, because you know full well that you will never measure up to be half the man of anyone else on the planet. You are as nice to be around as a nauseous crocodile with rabies. You are, to sum it all up, a mockery of the human condition.

Should I continue, or is that good enough for now? Bozo.

-Phil

4054. Any Pro-25 mods?

Newsgroup: rec.radio.scanner
Date: 1998-07-29 00:00:00 UTC
From: xfamsirp@fea.net
Message-ID: <35bf8d49.350037584@news.fea.net>
Source record: 150398

I have only found one mod for this model and thats to hold 2,9 and lockout as you turn on the scanner. It zaps your channel memory but programs 66.4500 into channel 14, therefore allowing you to scan from that point up to 88.0000...a part of the spectrum previously blocked (anyone know who uses these frequencies?). For some reason it won't let you scan down to 54.0000. So its advantages are minimal.

Does anyone know any different mods for this model?

>arranged it as a buried radial system.

So the soil here is dry and sandy for the first 3 feet, then is
permeated with ground water which seems to vary from 5 to 8 feet down
through out the year. My ground rod's are 2-10 foot 3/4 inch hard
copper pipe separated by 6 feet and tied together with #6 copper . Is
this an safe (lightning) and adequate (rf) ground setup? Connected
from the base of a discone to the rods with un insulated #6 copper.
Should my radio be able to survive a direct hit at the antenna?

I thought Radio Shack did not make their scanners. Just put their name on
them, like most of their calculators are by Casio, etc.

Tandy manufactures Radio Shack's (a division of Tandy) scanners. Nowadays, they do use parts from other companies, and have been known to sell a few partially-modified scanners from others (The PRO-90 is from Uniden, for example).

It occurs to me that as I am considering buying an expensive "all-in-one" wide band receiver such as the ICOM R8500 or the AOR 5000, that I should find out if anyone nearby has employed trunked systems...

I'm in the South San Francisco Bay Area... Is everything around here still "clear"? The big cities are San Jose and San Francisco, and the last time I checked, they were not trunked...

Can someone help me here?

Thanks,

Nope. There may be a little more interference (poss. caused by another transmitter or even another image on the same image freq), but it is an 'image'.

I would prefer to have a scanner capable of covering local emergency services plus TV audio, and an AM pocket radio for local radio stations. While most consumer level shortwave radios include AM & FM for local stations you won't be able to listen to the police/fire/EMS on a shortwave radio (there are a few high priced exceptions that cover all the bands). BTW, when buying an AM portable, buy one with just AM, and not an AM/FM model. Why? Cause the AM only radio will use much less current and your batteries will last much longer. Also, if emergency use is an important consideration then either buy a scanner that uses common AA batteries (you won't be able to charge a nicad pack if the power is out after the storm) or make sure you have a DC cigar lighter power cord so you can run/charge the radio from a car battery.

>Uniden may have one, but I've heard and seen no other info.

No, I don't think they have one yet. Here's why:

The current Trunk trackers work like this: The scanner reads the datastream until an ID activates (someone transmits), checks the ID against a lockout list, checks to see if it's one of the ID's we want to hear, then changes to the assigned channel, waits for the comm to complete, then goes back to the data channel. This process then repeats itself. This works for Motorola systems because 1. They really don't care what order you have the frequencies in, the data channel still assigns it correctly, and 2. They don't have any anti-scanner tones.

The problem is twofold. First you have those damn anti-scanner tones at the end! The GE scanners will need to go the addtional step of detecting the tones and going back to the data channel before they finish, so you don't miss the replies. Kinda tough to do when you aren't listening to the data channel anymore.. They'll have to incorporate the G/Wiz board into the design to avoid this. So far, so good, but here comes the show stopper:

Secondly, EDACS/GE systems are picky about what order you place the freq's in. They HAVE to go in the right order, or you'll jump to the wrong ones. It's not too hard for experienced scannists like myself and others to figure out (by looking at the data from the data channel via PC connection, incidentally) what channels go where. However, try explaining this to a newbie, who buys this GE scanner as his/her first scanner, and has to do this WITHOUT the advantage of a PC. If you think your BC235 or Pro 90 is tough to program, you might as well not even look at this one!

Suppose Uniden goes all out and does one anyway? Then you have obstacle #3: The cost. Sure there are the extreme scanner buffs like me who'll buy it, but most of the scanning world would be lost on this one, so they'd have to sell them for a fortune to make any money. Like $1000 MSRP, or about $700 street cost to you and me.

So, as I said, I don't see one happening for a while yet. But, software guys like me are always figuring ways around things like this. More to follow in a few months, hopefully...

I'm curious about this - I have seen several comments about the poor quality co-ax used by cable companies. I've never used any of it so I have no first hand knowledge.

But, they are sending signals of several hundred MHz over relatively long distances, are subject to very serious restrictions relating to leakage, and any problems cost them money. Why would they use junk, or am I missing something here?

You CAN use a splitter to use one antenna for 2 scanners but you will lose approx 50% of the signal strength so it's not recommended. I have done it but I was mostly listening to local repeaters. If you are listening to local comms with strong signals you might be OK. The best thing to do is add another antenna in the attic or on the roof.

I'm sure this isn't what you wanted to hear, but that's how it is. Good luck ....

Mike

Jeff,

If you're interested in monitoring military communications then you need to join MilCom, the e-mail listserver dedicated to military monitoring. We have members all over the U.S., in Europe, Japan and Australia. Many members post callsign and frequency loggings daily. We have several folks in Ohio who could probably help you.

To join MilCom, the military monitoring e-mail listserver,:
Send an e-mail message to: majordomo@qth.net
In the subject put: milcom
In the text area put: subscribe milcom

That's all there is to it. You should start receiving messages within a few hours. To post a message to the list members address it to milcom@qth.net. For help finding frequencies in your area just post a message stating your location and requesting frequency help and you should get some answers.

Or, you can add a signal amplifier BEFORE the splitter to boost the signals so even with the loss caused by the splitter there's still plenty of signal strength.

I've seen units for sale with these blackboxes.

>What does it do? Move the entire scanner interface onto the computer screen?
>
Yes, but that is only the beginning... A lot depends on the software that you use with the interface, but basically having computer control allows you to set up unlimited number of banks. You can dump the entire contents of one of the freq CD-ROMs into the program so that the corresponding licensee info, location etc. is displayed along with each "hit." You can decode DTMF and CTCSS tones.

I use Probe which enables you to set up "groups" with virtually unlimited number of banks within those groups. You can also set up a variety of virtual scanners and switch from one scanner to the other with a single keystroke. It's like having 10 different scanners available. Probe also increases the scanner's scanning speed--up to 65 cps for the 2006, I believe. I get 80-plus on my 2042.

There's too much to talk about! Opto is having a sale on the interface, I think. Check it out at www.optoelectronics.com. Also check out Steve Hancock's 2006/Probe web site. Unfortunately, I don't have the URL but a search engine will turn it up.

In the world of radio I know of over 700 to 800 that petitioned to get rid
of Bill Cheek from a private scanner technical mailing list.
I would dare say that 700 of his worldwide peers did not agree that he was
or is a nice guy.

Some used the clear evidence of the foolishness found in rec.radio.scanner
as evidence of what happens when Bill Cheek is present in any public
discussion. Personally I don't care one way or the other but I have to admit
the quality of the scanner listserve has improved dramatically since Bill
was dismissed.

Ron several years ago I worked on installing
the best mobile installation I could, including
a commercial antenna. I was real proud of
it and was showing it off to my cousin who
was up visiting from Texas. He had one of
those Antenna Spec. splitters on his scanner.
His scanner was picking up Texas DPS
on 42.9 MHz. Mine picked up nothing on
that frequency. When I hooked my scanner
to his splitter, I got them full quieting. Can't
say if they work this well for everyone, but
I was sold.

CAD is "computer-aided dispatch". I don't listen to VFD that much, but one of the group has a contact in the department; I'll get him to ask when they use it, and what sort of info they pass. If you are attempting to monitor it, be aware that when WARS is implemented in November, they will switch both their voice and data over to the new digital system. Sources tell me that they will not be using Mobitex (or MDC-4800) for data, but that remains to be seen.

Info is posted as we get it at

>
>Cost is the answer. You need a wider bandwidth receiver for just 20 MHz.
>Not worth doing for the cost of manufacturing the scanner. Would you be
>willing to pay for the feature?

Many persons are under the impression that the frequencies a scanner can receive are determined by the microprocessor's firmware (programming). In reality, the microprocessor has almost nothing to do with receiving signals. It's responsibility is turning on and off circuits, and providing various control voltages that cause the circuitry to receive chosen frequencies.

It's like the microprocessor being a car's gas pedal, and the receiver-circuitry being the engine. Floor the pedal and the car goes 100. It doesn't matter how you modify the gas pedal, the car can only go 100.

So... Back to the answer: Cost. If the microprocessor were reprogrammed to allow 88-108 or 76-108 MHz, the circuitry would have to be beefed up to receive more frequencies. Another problem with broadcast-FM is that signals are of far greater bandwidth (hence, the terms Wide-FM and Narrow-FM), which requires a serious addition to the receiver. The microprocessor would also have to select which circuit to use -- Narrow-FM or Wide-FM -- based on frequency.

I have a BC-210 XW. I presume this is basicly the same scanner. Mine has 20 channels and a green LED freq readout. There IS NO information on this radio ANYWHERE. The only little bit that I managed to find is at <http://www.uvm.edu/~swarley/bc210.htm> it is a small conversion page. While messing with my scanner, I noticed that you could get the PLL to luck up from 210-400 MHz, and lower to around 18 MHz and up to almost 600 MHz, but performance drops of very fast as soon as you get out of the scanner's "normal" bands. I would do this by lowering the input voltage to a point when the PLL momentarly unlocks, and then locks back up in time to retain it's "unlocked" freqs. Hope this hepls some.

>check the adapter for the correct info. I imagine you can get a car
>adapter to fit your needs at Radio Shack.

I was almost right, but I fumble-fingered it a little...

That should be 6Vdc, 200 mA, and the collar of the plug is negative while the
inside is positive. Shouldn't be too hard to find a car adapter to fit
those specs....

Wrong: I am 15 and I am not a "new" ham. I am also just as active during the school year in this newsgroup - just later in the day.

MOST importantly, I was asking "Why so much", but you seem to think I said something else, like "you can't sell them for that!".

Now, you tell me how that looks like I "know it all" (asking a question and stating truthfully I can pick up $10 pagers and cellphones here at The St. Paul Store in St. Paul, Minnesota). How does that demonstrate arrogance? Exactly: it doesn't.

I wasn't answering the post - I was responding with a *question*.

So, to conclude, what the hell are you talking about?

Wrong - I know how to use them. I don't want to, however. I find you and
everyone else like you rediculous but entertaining.

Kind of like being part of the audience during a fight on Jerry Springer.

I am not that stupid. I've got my own server, too.

What I was saying is the he has his own mail server, so if someone wanted to report him to the "email complaint department", that would be Bill Cheek himself.

>>That's correct. Sacramento simply refused to budget funds for
radar for the CHP. Big bucks in the trucking lobby up there.<<

The CHP bought several hundred of the Kustom Signal radar units in the Eagle line, the Golden Eagle version, I believe. This was 2-3 years ago. Funding came from local jurisdictions and not the state budget. Somewhere around here I still have the training video CHP made to train their officers on this new technology. Plenty of CHP cars are radar-equipped.

READ the above, Nitwit. I don't need "support"
for my statements, either. No one needs "support"
when commenting about you......with possible
exception if anyone were to say something upbeat
and wholesome about you, then THAT would require
"support".

Anything else is a "given", you flippin weenie.

Blue sky; green grass; hard concrete; pounding
surf; tall weeds; and other similar descriptive
terms do not need "support" when communicated
to people with the rudiments of basic cognitive
functions.

Likewise, statements about you, to the effect....

no credibility, no believability,
no straightness, no regard for truth, no-
nothing other than imbecilic idiocy associated
with whatever you post,.....

...are also "givens". They're prima-facie;
SELF-SUPPORTING, immutable, unyielding, rock-
solid, hard-core, brass-tacks facts, Hermie.

Ask around, you flagrant vagrant! Take a vote!
Compile a poll and see if the newsgroup's
perception of you isn't that of common excrement.

Hell, all you can do is foam and run off at the
mouth.......

No wonder they call you a friggin loon.......
and THAT just happens to be an act of kindness...

>Bearcat and Radio Shack scanners in most of the stores I've been to. If
>anyone has any info that could persuade me for or against a Relm, please
>let me know.

I've had one of these scanners for about six or seven months, mounted in my car. It's got a pretty sensitive reciever. The ctcss and dcs decoders work well. The alphanumeric display only supports up to 7 characters.

The external constructions (body, bracket, etc) are somewhat less than studry: plastic and thin metal. Mine has seen mild abuse and has held up so far.

It is prone to interference/intermod on the VHF-High bands. This can be eliminated by using the correct PL/DPL tones. However, not all frequencies use tones.

The computer interface is strictly for programming Frequency, Tone and Alphanumeric information. You can upload or download this information relatively easily.

The Relm MS-200 is not "the perfect" scanner. It is, however, the best mobile scanner available for my particular needs.

Check out Rich Well's review for more info:

http://www.qsl.net/n2mca/

Hope this helps!

4121. Tuning tips for the PCR1000

Newsgroup: rec.radio.scanner
Date: 1998-07-29 00:00:00 UTC
From: dlonard@my-dejanews.com
Message-ID: <6pnk56oo1@nnrp1.dejanews.com>
Source record: 150465

I posted a preliminary post on tuning the PCR1000,
for those who have forever lost their EEPROM settings.
I've got some extra alignment tips for getting the
reference oscillator drift restored. Especially for
those who are obsessive/compulsive about being right
on frequency but without access to exotic test equipment
(like myself).

1. Get a copy of AF9Y's FFTDSP4.2 waterfall spectrum
analyzer program that uses a common soundcard to generate
a nice waterfall power spectrum (when the radio is in
USB/LSB mode). Cost is around $30, quick engine search
will turn up the source for this program. Comes in handy
for all sorts of alignment/weak signal work/etc. Feed
the audio output of the PCR1000 into the soundblaster
and your in business.

2. Run the EX-2099 program. Remember to START the
EEPROM button, read the EEPROM data, exit and rename
the ADJ2099.DAT file to hold on to your UNIQUE EEPROM
settings.

3. Run EX-2099 again, select the Reference Oscillator
drift subwindow. Don't play with the settings for the
oscillator yet.

4. Tune your radio to 468.8365 or 468.8240 in USB mode.
These are time/frequency standards broadcast by the
GEOS-8 and GEOS-9 satillites, frequency is derived from
the NIST standard and is very accurate. The signal
is CPSK modulated with a carrier that lands at 468.8375
or 468.8250 respectively. You can probably get away
with a modest outdoor antenna. The signal will be faint
or unhearable also. The FFTDSP4.2 should 'see' the
signal without any problems though. NIST suggests aiming
a 10 dBi RCHP antenna up at the satellite but all you
will need to receive is the carrier, not other CPSK encoded
data in the signal.

5. Open up the FFTDSP4.2 program in a DOS window and
look for a carrier that should land at around 1000 Hz.
Let the radio warm up if you haven't had it on long,
I would give the radio at least 30 minutes to warm up
before playing with the reference oscillator setting.
When the radio is warmed up, hopefully your radio isn't
so far gone that the GEOS carrier signal is out of the

passband. You should see a carrier and the CPSK modulation
extending out about ~100 Hz on either side of the carrier.

6. Go back to the EX-2099 software and move the refernce
oscillator drift setting one point right or left,
go back to the FFTDSP4.2 program and see where the
carrier lands. The closer you get the carrier to 1000 Hz
(remember that the display frequency is offset 1000 Hz
also), the closer you are to being very well aligned.

7. When your done, remember to hit the Rx Set button in
the EEPROM subwindow to save the value in the radio's
EEPROM.

If you can't see the GEOS-8 -9 signal, and suspect that
you are so far out of the passband to know where you are,
tune to WWV instead and try aligning there first to the
1000 Hz minute beep signal. Then move up to the GEOS-8
-9 frequency. Tuning at this higher frequency provides
better alignment. I got to within 12 Hz at 468.3875
(1 part / 33 million). How well this holds over time
remains to be seen.

8. Once the oscillator is on line, then you can choose
the BPF peak tuning point subwindow and slide the BPF
which is responsible for the 468 MHz region and tune
for maximum S/N ratio provided by the FFTDSP4.2 program.
At least this region of spectrum on your PCR1000 will
be as close to perfect as you can get it.

Again, do these things at your own risk. If your EEPROM
failed on you though, you've got nothing to loose, those
with healthy PCR1000's may want to adhere to the 'if it
ain't broke, don't fix it' axiom.

David Lonard
N5OIQ
dlonard-at-bcm.tmc.edu

If anyone should know of good frequency standards
for other frequencies (hopefully spanning the the PCR1000's
coverage) coming from geostationary satellites, I would be
grateful to be directed to that information.

A general question.....

What do you think is more valuable to have during an emergency
(hurricane, civil unrest, riots, etc).....a scanner or a
shortwave....and why? What can I monitor on one that I can't monitor
on the other?

Comments appreciated! Thank you...

Catz

......but.....but....THAT is easier said than done.
Assuming the gentleman wants to hear all there is
to hear betwixt 25 MHz - 1300 MHz, then there is the
problem of just WHAT preamplifier will properly
amplify that spectrum without adding more noise,
and without degrading critical signals within
that spectrum.

If he has an exclusive narrowband interest,
say 140-178 MHz, then prospects are a little
brighter, because it is possible to make or
buy a low-noise, high gain, quality narrowband
preamp.

Possibilities of a preamplifier for the entire
scanner spectrum drop out of the picture like
flies in a poison cloud. It just can't be
done, despite the undeniable fact that a wide-
band preamp CAN help with certain signals at
certain times.

But is it worth it? The best of the best of
wideband preamps will add more noise to the
system AND degrade the receiver's dynamic range.
AND, there will be pseudo-signals that result
from strong signal overload, desense, intermod,
crossmod, and other spurious.

Preamplifiers for scanners are a classic case
of "robbing Peter to pay Paul". You may well
get a "gain" somewhere, but it will come at an
expense of an equal or greater loss somewhere
else.

So "justification" for a scanner preamp is best
based on interests. If a preamp helps the area
of interest and you don't care about the
degradation it will cause elsewhere, then so
be it.

In a word, there is more to a scanner preamp
than just sticking one in line.....lots of
things to think about; and to weigh......

FWIW, I have one of the best, a J.I.M. M-75
and I rarely use it.

4125. Cheeks Dumped from List

Newsgroup: rec.radio.scanner
Date: 1998-07-29 00:00:00 UTC
From: dalyrimple@poundhouse.com
Message-ID: <dalyrimple-2907980950410001@pdx43-a48-44.teleport.com>
Source record: 150469

For all of you who left the scan mailing list because of the presence of Bill Cheeks, you may return to your regularly scheduled programing. He's been 86'd. Forever.

4126. The email forging cancer in this group

Newsgroup: rec.radio.scanner
Date: 1998-07-29 00:00:00 UTC
From: "Pendergraft, J" <n4wfk@erols.com>
Message-ID: <35BF46C5.50DA@erols.com>
Source record: 150470

Funny! I got emailed a death threat, made to look like it was from someone in Beaverton NY. Then upon tracing the email back to where it came from, which was from someone who dialed into a modem pool via an ISDN line in Portland OR. Now that I have confirmed who dialed into that line, I feel better about saying this.
Hello John!
Now that "you" know that I know who "you" are and more importantly, where you are, I feel like sharing with you. So, in reply to...

"Fuck You!

We don't need you telling us what to do.

If you ever do that again, I will hunt you down and kill you."

So when would you like come out here and tell me this face to face?
By the way, since the first thing you are going to ask is "how do I know who did this", I say to you that if you want an education in how to become better at your sick craft, you will have to pay someone. I can't see any purpose in doing it for free. Since, (except for the sick few), most persons don't appreciate massive flaming up here, this is my only post on the matter. Your not worth the effort to spend any more time on. Your a sick, pathetic peice of human waste that unfortunately gets stuck on someone's shoe all too often. As for the news group, I can filter you out, so no big deal. Oh yeah, I understand that you like to QRM repeaters. No life?

Kenwood has produced scanners and there are many other companies that do.
Sony, RCA, Opto, Yupitera, Icom, AOR, and others come to mind. Check out

The Radio Shack Pro 2004, 2005 and 2006 are all capable of scanning CB
frequencies since their lower limit is 25 MHz. You might be able to pick up
a used 2004 for $150 or less.

It can be welded or silver soldered or brazed depending on
the material. Welding only really applies to steel or aluminum
conductors, of course, copper has to be hard soldered or
brazed. You aren't allowed to soft solder it.

There you go, believing the ARRL again. Anything below skin depth is wasted as an RF ground. The skin depth varies according to soil permitivity and conductivity, of course. Dry sandy soil will have a greater skin depth than heavy clay. But unless your water table is pretty shallow, driving to the water table is a waste of copper for RF grounding purposes.

For example, the water table here is about 190 feet, skin depth at 3.5 MHz is about 3 feet for our heavy clay (about 15 feet for dry sandy soil), so you'd be wasting a bunch of copper driving to the water table. That copper would do you a lot more good if you arranged it as a buried radial system.

Note, we're talking *RF* ground here, DC and mains AC grounds are a different matter. Skin depth at 60 Hz is over 700 feet, so a deep ground can pay off there. But it won't do you any good for RF purposes.

Hey, my fine feathered Fallow..... :-)

But....YOU shouldn't care a whit one way
or the other. You're either here for the
good stuff, the bad stuff, or BOTH. But
since you sniveled and blew snot bubbles,
it's pretty certain you're here for the bad
stuff or both, and not JUST the good stuff.

Because, if you were, you'd have that miserable,
rebellious, stinkin, sorry-assed computer of
yours whipped like a Dutch Uncle and behaving
for you. Obviously, it isn't, though.

> I've *forgotten* more about computers than
> you'll ever know, you third-grade newbie wanna-be.

Money talks; your bullshit walks, pal. Lay
your wallet on the line and let's find out.
No lugnuts, no glory....... Trouble is,
you KNOW and I KNOW you don't know beans from
apple butter about computers. Your use of
(Yet Another NewsWatcher 2.1.8) screams that
fact louder than your sniveling and whining.

> I rather enjoy watching you shoot yourself in
> the foot

Then, like I intimated, YOU are not here for scanners and scanning. So I'm obliged now to lay the bad news on ya. That ain't my foot you see getting shot. It's a dimunitive member of your anatomy that somehow lost its connection to your motor-control trunk....which is why you can't feel it, apparently.

Seriously, beat the living snot outa that sorry computer of yours and make it do what you WANT. If what you are seeing is what you WANT, then don't be sniveling and blowing your snot-bubbles out here in public for people to see and to poke at with sharp pointed sticks.

Oh...and you might try putting some BlisTex on those canker sores in your nostrils. Snot bubbles can irritate them and turn 'em into big ol' fat ugly warts after a while. Can you imagine a wart inside your schnoz about the size of a cherry?

Whooooooooooooooey, you need help, pal.

EVERYONE had the answer, manureferbrains! That's
why it was given to you to "answer". If it
were anything serious, you wouldn't have gotten
a word in edgewise.

Somebody would've slapped that snot bubble
back into your schnoz so hard it would've
come out the other end like a larrupin'
monstrous burst of baked-beans flatulence.
To infer that you'd have "broke wind" just
wouldn't do it justice...but you get the picture?

Say, Herm, what's this I hear about you
SUCK-STARTING a Harley Davidson motorcycle?
I laughed my ass off about that one and how
you sucked a tennis ball down a garden hose.

Ha ha ha ha ha ha ha....you friggin limpid loon.

Geezus, Herm, you are so damned ignorant it's
impossible to even attempt a sensible conversation
with you.

STOP, you flippin weenie, and think about the COST
of floor and display space! Coaxial cable, for its
bulk and weight, is practically a no-profit item,
and even the "hicks in the sticks" are smart enough
to keep it in the back room or in an out of the
way corner.

The stuff that pays the freight for ANY store,
much less Radio Schloque, is the glitz and glamor
stuff like stereos, TV's, phones, toys, and fluff.

You wanna talk straight with me, Hermie? You get
outa that circular logic pattern and be straight
and factual, and hold truth in high esteem.

Them's the good words from the good book.

Heed 'em.

Channel Master Monitenna 5095A all band scanner antenna with mast, bracket and coax in sealed original box. $40 including shipping.

I bought this antenna from AES a year ago for $50 and decided to put up a discone for TX capability. I received the antenna and never opened the box.

Stephen

Gadfrey Gadzooks! Sho 'nuff, we wouldn't
be wanting to do that. Him shaggin all them
cobs at once is pretty dangerous and crazy.

Speaking of Lavender......the boy-toy goes
by the handle of "Lavender Larry" on the
CB radio as he "works" the truckstops up
there in Portland. And his bestest gooood
buddy Boe goes by "Pink Stink" .....

....just in case you were in the mood for
a little propaganda of reasonably accurate
quality and quantity..... <g>

More? Okay..... Lavendar Larry and Pink Stink
were overheard beating their gums on channel 19
from their cars up there in Portland on a bluff
overlooking the Columbia river where a ferry
was crossing the river:

Pink Stink: "Thay, Larry, lookey at that ferry boat.
Lav. Larry: "Wow, I didn't know WE had a navy!"

Hmmmmmmmm.....

When a scanner listener wants to use a scanner to listen to amateur repeater freqs it is still scanning & does not need to be referred to an amateur radio NG.

If you really believe it should do the above then we should also refer people wanting to listen to police freqs to police newsgroups & refer those wanting to listen to fire freqs to fire newsgoups.

Are you prepared to tell ALL the people who want to scan Amateur freqs, police freqs, & fire freqs to LEAVE this NG & go to those respective newsgoups?

Lucas County EMS who does most of the city and county squad runs operates on the UHF medical channels. Just dispatch tone-outs are done on 462.8500, so I have found monitoring that all the time helpful, then punching in another bank with all of the frequencies when I want to hear squad operations, patient reports, etc . . .

As for other Greater toledo frequencies, I have nothing organized at the time, but I'll throw out what I have. When I get back up to school, I'll probably put all of this in order . . .

460.475 Lucas County Sheriff
460.275 Lucas County Sheriff
154.190 Lucas County Fire Net - High band
33.740 Lucas County Fire Net - Low band
462.950 Lucas County EMS - Dispatch
462.975 Lucas County EMS - Enroute
460.375 Maumee Police Department
154.205 Maumee Fire & EMS
460.325 Northwood Police Department
460.400 Police Metro-Intersystem
460.500 Waterville Police Department - Dispatch (by Maumee)
460.575 Waterville Fire Department, Slyvania
453.450 Monclova Township Fire
154.355 Whitehouse Fire
460.625 Springfield Township Fire
461.825 University of Toledo - Police
461.025 University of Toledo - Busses, Dorm Sercurity, Operations
461.950 University of Toledo - Maintenance, Operations
453.825,460.075, 460.1 Oregon Police
460.050 Sylvania Police
462.025 Ottawa Hills Police

4177. Antenna ?

Newsgroup: rec.radio.scanner
Date: 1998-07-29 00:00:00 UTC
From: Barron <savy@ma.ultranet.com>
Message-ID: <01bdba89$49623260$324006d1@savy1>
Source record: 150551

I have a scantenna in the attic hooked up to a 2006 great reception. I have another 2006 on first floor with no outdoor antenna and the reception sucks.
Can I splice via a splitter to both scanners? What type of degradation will I see from
doing this? Is there a better way to do this such as another antenna? not the way
I want to go though. Do they sell signal boosters and is that recommended in this application?
Rarely, if ever will I ever use the 2 at the same
time but if I do assuming I can do this will this cause a problem.

Any help you all can provide would be greatly appreciated for this aggravating problem.

Ryan-

Wrong!

Bill might very well have a ROOM FULL OF SERVERS but that does NOT make him an ISP.

To be an ISP, you have to purchase the feed, register with Internic, etc.

I have my own Windows NT 4.0 SP3 Server running here but that doesn't make me an ISP.

If you ever listen to the Broward County trunked system, head over to:

http://www.geocities.com/SiliconValley/Network/8916/index.html

I just added a pretty complete html table of about 75% of the system!
I'm still working on the trunker.exe 1f25grp.txt file but it will be
there soon. The 1f25ids.txt file has one of the helicopters in it
(papa513) and some detectives + others. If you have any that I don't
have listed please send them!

Thanks Jack

Old news. First, the bill passed the House this past April. Second,
it was heavily modified before passage, and the committee report says
explicitly that Congress does not intend to ban lawful use of
scanners. Third, it does no good to write to "all branches of
government" about pending legislation. It only betrays ignorance of
the way the government functions.

For *current* information, visit the NF2G Scannist Pages - USA Section
at www.ggw.org/nf2g/usa_index.html and click on "Laws & Regulations".

From: Jon Posner <jon@angel.net>
Message-ID: <35BF90CC.B7A129E2@angel.net>
Source record: 150565

I have an AR8000, unblocked, w/ interface jack (3.5mm) for sale. Unit is cosmetically and functionally *perfect* and has been used very few hours. Comes with 2 U.S. a.c. adaptors, original antenae and crappy leather case as well as box, manual and original receipt. Was purchased from UK dealer, ser#033537.

Would _strongly_ prefer a buyer who could pick up unit in person-- to evaluate excel. condition and facilitate payment. I am located in New York City.

$500 or best offer. jon@angel.net

They may have been responses, but ten meters is amateur, not scanner info, and the question should have been referred to the Repeater Directory. And your posting about coaxial cable was about as incorrect as an Extra class ham with a commercial license could be.

Now your story has changed slightly Bill. You used to say you had the 1st Class General Radiotelephone license, a license the FCC has never issues.

Reagardless, the FCC has NO RECORD of you EVER having ANY Radiotelephone license of any class with either the first names of William or Bill. When asked to provide the license number for your claimed license, you have been unable to give one!

>....and renewed it every five years
> thereafter, until they did away with that
> particular certificate.

That "certificate" (actually a LICENSE - if you had one you would know the difference) was converted into the "General Radiotelephone license" & is STILL being issued TODAY by the FCC. So if you kept renewing it what is the license number? The FCC says you have NEVER held any type of Radiotelephone license from the FCC!

> At that time, I became a charter AND senior
> member o

I don't care what clubs & groups you belong to as it means NOTHING for getting an FCC license for Radiotelephone. You are simply trying to shift attention away from your lying & lack of a FCC license!

I have been following this thread, besides making me real angry a few thoughts passed through my otherwise empty head.
1) How can the publisher print and distribute a book that has info obtained in an illegal manner?
2)How can the book stores sell this book.

the radicals (politically left & right) in our society go nuts about us (hobbyists) listening to their 'private' comm's while they take NO precautions, BUT make the presumption of privacy? i don't get it, i use a cordless phone, yeah sure, an old one too (49Mhz), but i know that all my neighbors could be listening and i DO NOT make any presumptions of privacy. If it's private i do on the really old wired phone or in person. IMHO the author AND publisher of this book ought to be locked up, and the book stores should refuse to stock this volume.
All the people who say WE HAVE NO LIVES(hobbyists) I am sure will flock to the stores to buy this book, on this, I have no dought! AND I am sure they these same people support all the anti scanning laws.

I dont get it? mabye its just me: a pro gun-anti NRA/HCI middle of the road conseritive democrat?

WRONG!

Your intent was that a scanner listener chosing to listen to
amateur repeater freqs does not belong on this NG & you
are WRONG. This is for scanner listeners, regardless of what
they are listening to.

> - from which you got the
> info,

WRONG again!

I know amateur freqs from many years of solid experience in the
communications field, I don't need to consult a book for the simple
things. (unlike YOURSELF)

..Only repeaters, and only "non-protected" ones at that. Examples: My fire department's two tactical simplex channels, even though we're licensed for them, don't show up in the TAFL. The new city trunk doesn't show up there, because.. the City Police are part of it, and police services are some of the users that are "protected". Same for Edmonton's trunk, IIRC.

Have you noticed that since Bill got booted off Scanning Mail
list that he has been making a lot of trouble on this news group.

Bill just got kicked off the mail list a few days ago & just in
the last few days he has probably tripled his usual number of
harassing posts on this NG.

So I suggest Bill simply handle his disappointment & defeat
like a man. Bill should stop using this NG as a punching bag
for his agressions. This NG did not cause Bill to get kicked off
the scanning mail list, Bill's own actions caused that! Bill, if
you can't accept it then go to a therapist for counseling or
see a Doctor for medication.

If the problem persists then people whould express their concerns to
the ISP's that provide Bill his service. He uses both CTS.COM &
SAN.RR.COM.

Abuse@cts.com, postmaster@cts.com, root@cts.com, & admin@cts.com
are good addresses to voice complaints to for the CTS system.

Abuse@san.rr.com, postmaster@san.rr.com, root@csan.rr.com,
admin@san.rr.com,
abuse@rr.com, postmaster@rr.com, root@rr.com, & admin@rr.com are good
addresses to voice complaints to for the san.rr.com system.

I do have ground water at 5-8 feet down all year around.
So what do I have to do to be relatively safe, and have somewhat of an
RF ground? Can I silver solder a coupling onto the ground rod and
drive it another 10 feet down or what?
I will probably keep grounding the coax when I'm not using it, but I
would like a relativity safe ground.

Wrong mackey, when people stated you were within driving distance of one
of the colleges you told them it was too far a drive from Beaverton.

You lie so much that your now having trouble keeping up with all the
lies you have told on here.

You are the one who is stupid in thinking people on here don't remember
the crap that you spew out of your mouth and that all of it is lies.

You lied about the warrant and having proof that one existed, you lied
when you said you were not doing the mail bombings.

I guess the truth hurts and now you have to call people stupid and ass
because you can't get away from the truth as your lies have finally
caught up with you.

And don't say show you the posting , if you want to see it you do the
the search on dejanews.

Mod is interesting:

Removing the 3 diodes left on board allows full MARS/CAP mod, but
further deletes 800MHz receive. There has to be a combination of those
seven diodes to receive normal or full 800MHz and maybe return cell
receive. Additionally, the mod(removal of all diodes), while switching
through bands allows for a TV band, channels relating to standard
transmission. It can be scanned or searched as with freqs. ANYONE know
which diodes need to be left on for full 800MHz RX and not cutting out
after 809-849 & 859-894, which have been removed.

Its an okay scanner. But consider this: If you buy the Pro-90 local you must pay sales tax. In NC that means 6% or $11 dollars for a total of $191. If you mail order a Uniden Trunk Tracker from CEI, for example, you pay $180 + $18 shipping for a total of $198. What do you get for the extra $8? A second battery pack and alot of frequency information. I've been very happy with my TT for several months now and am considering another one. Have you priced battery packs lately? They are considerably more than $8. One last note. I read on Rich Wells' Strong Signals Page that Mr. Nicad E.H.Yost offers 1500mAh packs that will fit the TT for $25.

How long is the warranty on the Uniden? Do I take the Uniden to RadioShack for service or do I have to mail it somewhere? Does Uniden pay for the shipping if I do have to mail it? Is there a CEI 10 minutes from my home? What if I don't like the scanner? Do I have to pay CEI a restocking charge? $8 dollars and an extra battery huh? I guess that is what they have to offer to overcome the convenience and service provided at RadioShack. Extra battery pack? Yeah, RadioShack sells them for $25 also. ;-)

Brian

See http://web2.airmail.net/lblant1/dfw/digital.htm for more information on ETRUNK.

ETRUNK is a utility that decodes the Ericsson EDACS control channel, and will drive a second scanner to achieve "trunktracking." It works quite well, and I use it to successfully monitor 3 EDACS systems in the DFW area..

>
> Any suggestions would be extremely appreciated.
>

I just got mine from there and it works extremely well.
I can't believe how much reception was lost with my old unit.

This one brings in the stations quite well.

Folks have mentioned that the antenna pin can get broken. My old scanner developed broken solder joints at the antenna connections inside from the movement of the antenna. When that happens the reception diminishes or is completely lost.

That unit has a full warranty if you bought it from Uniden's site. Call them up. Check the antenna pin (the little wire which fits into the connector.

Everyone knows that the Pro-90 is made by Uniden. I was disappointed to learn that it will be discontinued, and replaced by the Pro-91, which is only a 150 channel and costs about $50 more than the Pro-90. The Pro-90 is a fantastic radio, and a very good by at $199. Having 300 channels, Trunk Tracking, and being the same radio as the Bearcat BC1250 is a GREAT PLUS! I expressed my regret to the manager at a Radio Shack about it being discontinued. He told me that MOST of their scanners are made by Uniden. When pressed for which models, he didn't know. When I asked if the Pro-91 was made by Uniden, he was not sure.

Can anyone confirm that Uniden does indeed make other models beside the Pro-90 for Radio Shack, and is their new Pro-91 by Uniden?? The Pro-91 only has 150 channels, and costs more. I find it hard to believe that it could be made by Uniden.

If you really want to be prepared for everything and anything, get
both!! And you should also have a good mobil CB radio with at least a
good mobil antenna. A base antenna set-up with be better, but still use
a good mobil radio as the base. That way you can always use a car
battery. You don't have to be "in to" CB radio to have a small base
somewhere in the corner of your basement or garage. If telephone lines
go down, and power goes out, your CB will really come in handy. Invest
in a good antenna so you can at least get out 35 miles or so.

If you had to choose one or nothing, I suppose I'd rather have a
scanner.

But if you really want to be prepared for anything, you need a little
bit of everything!

All you need to do is go to Radio Shack and get a voltage
regulator with a 9v output, and replace the 12v voltage
regulator that is in your current supply.

Gentlemen-
This mod was forwarded to me by Eric Freund. Do with it what you may...
Good luck.
-Matt

Well every one this is a really scary mod to do to the Q7. It is really not
for the faint hearted or any one that doesn't have a soldering iron tip less
than 0.9mm.
I take no responsibility for these mods and am warning you that it does void
warranty!
It is extremely easy do destroy something so be CAREFUL !!!! This is only
a description of what I found. Use this information at you own risk!
OK now!
With the radio face down antenna pointing away (this is the orientation the
unit will always be in when I refer to part location) remove the antenna and
pull the knob off.
Unscrew the switch and SMA ferruls. Caution the SMA ferrul is sealed with a
thread sealing compound.
Open the battery compartment and remove the batteries.
This will remove two screws. Remove them. Then the back can be lifted up and
towards you.
This will reveal a main board and a sub(RF) board mounted on top of it.
Remove the single visible screw on the RF board on the right hand side.
There are two points where the shielding has been soldered to the lower
board. On in the lower left corner above a ferrite inductor, the other in
the upper left near the blue assembly of the switch. Carefully desolder
these with desolder braid. (careful not to melt anything!)
carefully hinge the bottom of the RF board up till the connector in

the
middle of the board disengages. Then push gently on the SMA
connector and
pull the RF Board out.
Half way now.
Remove the screw on the right hand side central to the PTT and FUNC
button.
And the one on the left just bellow the little shield. DO NOT
REMOVE the two
top corner ones they hold the LCD assembly!!!
Desolder the two speaker wires from the speaker.
Lift the bottom of the board out till the LCD clears its mounts in
the case
and pull the board out GENTLY so the rubber seal is not dislodged.
Turning this board over with the LCD now facing you there is
position for 7
SMD diodes marked A or A2 on the right hand side just above the
central
mounting point.
All have to be removed I had 4 in my radio!
The easiest way of removing them without damaging the assembly is
to
desolder one end with desoldering braid and the while heating the
contact
with the soldering iron lift that end with a small pointy screw
driver
(0.7mm jewellers are good!). They just need to clear the board by a
fraction
and then they can be easily reinstalled if necessary.
Reverse this procedure to reassemble and be bloody carefull!!!.

NEWSILVER1 wrote in message
<1998073004541400.AAA09506@ladder01.news.aol.com>...
>I wonder why we don't attract more young people to ham radio?
>
>
>
Some possible reasons why HAM radio does not attract young people.

1. HAM radio does not do anything that one cannot do with a land line or
cellular telephone.
i.e. Low cost world wide instant communications, as opposed to 25
years ago when calling
across the USA was expensive and not very reliable.

2. The general public does not perceive HAM radio operators as "Gods of
Electrons" .i.e.
Since JFKs space race days, scientist and engineers have had more
exposure to the public, this
includes they failures as well as successes.

3. People in general have negative views of introverts, who cannot
relate to normal every
day events in life. i.e. HAM radio operators worry about issues
perceived as insignificant
by most people, that is; who is more knowledgeable about particular
technical subject, LIDs who
(a term that has very little meaning to an average people) clutter
Repeaters, newsgroups, etc.

4. No glitzy Computer Graphics with high impact gory action. i.e. Duke
Nukem and the Temple of Gore!
HAM radio operation does not simulate the violence craved by certain
groups of young people, used
to relieve their frustrations.

This is my opinion based upon observations of my friends "young people" for
the last 20 years.

Ivan Ivanovich

CDPD is dual-encrypted; once at BC Tel and once at the terminal...
MX-COM makes a modem chip for RD-LAP; see
http://www.mxcom.com/prod_info/pi929B-1.htm for more info. If you could
build a board for RD-LAP, AND the protocols were the same, then you'd
still have to get around the dual encryption. As far as the voice
component goes, a lot of us are hoping that once the EDACS system is in
place, it will crash around their ears and they'll all go back to
VHF... otherwise we'll have to fork out the cash for LPE-500's (and a
cloning cable)... :)

>Which side should I listen to Ship or Shore frequencies?
>
>Todd

Unless the frequencies are paired for use as the Public Correspondence (Maritime Operator) channel, then the rest are simplex which will indicate that the ship and shore will most likely hear each other.

This means that if you live near a marina and/or the beach. Then you would listen to the simplex frequencies like

156.800 (CH 16) Calling / Distress
157.100 (CH 22A) US Coast Guard Liaison channel.

Use your search engine on the internet and look up "USCG Communications"
Make sure the quotations are used so as to narrow your search :)

There will be a chart that will list the VHF channels for maritime comms.

If you have a shortwave receiver then a frequency you can monitor is 2182 khz (USB - upper sideband) which is used on ships beyond the range of vhf radios.

Shortwave / utility frequencies can be found by searching for "Shortwave frequencies"

I hope this helps :)

One last thing, for making an EDACS capable scanner, you don't need to detect the end of the transmission. Like the current Trunk Tracker, I am sure it will monitor the control (aka "handshake") channel at all times when monitoring in the 800 MHz band. Also, like the current trunk tracker, it will have dual receivers, allowing this dual-monitoring, but also allowing it to detect the end of a transmission *before* the 4 tones at the end, allowing it to keep on scanning.

The control channel is an indicator of which repeaters are active. However, when a xcvr is finished, the repeater is no longer rxing -- it is only transmitting (the 4 tones - to block scanners). The handshake channel is "updated" of this, and "tells" all radios in the system to cut the squelch.

EDACS and Motorola transceivers ALL have dual receivers -- one is always connected to the control channel, and the other is told where to go (what repeater to hook on to) by the control channel, and also various channel switches at any time.

Phil's explanation of detecting the 4 tones at the end is incorrect. Like the Motorola systems, EDACS has several weird tones every now and then. On a normal scanner monitoring a Motorola system, you can hear the two-pitch tone at the beginning of a transmission, and on the EDACS, the 4 scanner-blocking tones and the channel switching. On a Trunk Tracker, all of this is invisible when in the trunking mode. This is all done by having dual receivers.

I hope this explains it better to all.

Jack, NEVER believe that a grounding system will guarantee
your radio to survive a direct lightning strike at the antenna.
It MIGHT - but it might not.

Your installation is NOT a good rf ground.

It sounds like it meets NEC requirements for the size of the
bonding jumper between electrodes. But there are a large number
of NEC considerations concerning grounding that we don't
have facts on, so it is not possible to say your system meets
NEC requirements with any certainty. But even if it does meet
every NEC requirement, that does NOT mean it is safe, as you
are using the word. NEC requirements are a MINIMUM, and
do not guarantee you will survive a direct lightning strike. The
intention of the NEC is to provide practical safeguards for
electrical installations, not absolute safeguards.

You live where there is a lot of lightning, and where the sandy
soil makes for a lousy portion of the overall electrical grounding
electrode system. My *guess* is that your two ground rods
provide less "lightning protection" than might be considered
"adequate" - whatever that means. Ed

Cross-posted to: rec.radio.scanner,alt.radio.scanner

Everyone with PCR1000 radios,

Check this out:

28-Jul-98 02:25:00
Sb: PCR1000 interesting news
Fm: Michael Puchol 101344,1416
To: All,

Hi all,

To all of those afraid to use your PCR in case your EEPROM gets erased by software (ICOM's or 3rd party), take a look at the following page:

http://members.tripod.com/~pcr1000/index.htm

It features, free for download, an EEPROM backup/restore utility, created over this last weekend. This is the utility that a lot of users have requested ICOM produced or released, and we have met a stone wall.
Oh, just a small detail: all of you who have done the hardware mod for cell coverage restore, and most importantly, those who wanted it and would not risk it, this utility can restore cell coverage. It is just a flag setting in the EEPROM.
I think that, as it is illegal to sell software-modifiable radios in the US, then ICOM may well have to 'retire' this receiver. This may be why the protocols were kept so secret...

If ICOM had been wiser on this, it would not have gone this far, users could just have had some protocols to play with, and they would have been satisfied. Now the whole thing is open, and users have regained control over the receivers they purchased with their hard-earned dollars.

With best regards, and looking forward to using good quality 3rd party software again,

Mike

> >I'm looking ffor a list of frequencies for Calgary Alberta..
> >
> >Thanks, Vance

First of all, I have a monstrous list of freqs for Calgary and area. The TAFL is a fine *reference*, but it will never replace GOF (good old fashioned) scanner databases, for a few reasons: One, the TAFL doesn't include so-called "protected" frequencies.. which includes police.. which includes the new City trunk (more on that in a minute). And two, not every frequency that's useful to a Calgary area scanner listener will have the word "Calgary" in the license info somewhere.

(For the unclued, the TAFL is a government publication, separated by District Office (Calgary's is #23), listing every radio license in Canada, excluding the aforementioned "protected" services.)

Second of all--sorry Marcello, you're wrong about the Fire Department--only the Police have gone digital! The new city trunk is a Motorola SmartZone with five Zones (I'll get to that in a minute).. the Police side uses Astro radios and the Fire and EMS services share a common *analog* in-the-clear system. Actually the police have 2 channels on that clear system as well, although they've as yet never been heard there.

As mentioned, the trunk system has 5 Zones--one for each region of the city, plus a backup system. The four main towers are on Spy Hill (NW), Fish Creek (SW), and Banker's Hall (Center Core)--along with Rotary Park, which covers all areas the other towers don't. The signal is fairly strong so long as you know which Zone to be following (this is important with a TrunkTracker radio--with an actual FD radio you needn't worry because it picks the best Zone

automatically).

The frequencies are:

SPY HILL ZONE
Data Control Channel:
868.2625
Voice/Digital:
866.1125
866.2625
866.6125
866.7625
867.1125
867.2625
867.6125
867.7625
868.1125
868.6125
868.7625

FISH CREEK ZONE
Data Control Channel:
866.1375
Voice/Digital:
866.2875
866.6375
866.7875

Yes, the Forest Lawn zone has less freqs. It's only used when the main system takes a dump and during EMS's Sunday morning radio tests.

All of the above must be programmed into a TrunkTracker to properly monitor the trunk (although, I suppose, you could get away with putting only one zone in if you had NO plans to move the radio from its present location!) The way I have it set up in my BC235 is as above; Spy Hill is in Trunkbank 1, Fish Creek in Trunkbank 2, etc etc etc. Then you just switch to each trunk when you pass through its zone.

Coverage is impressive--with the BC235 I can get coverage using the Spy Hill trunk all the way to Highway 8 and Highway 22 out west. I have known CFD apparatus to be able to get back to Dispatch with no problems from the center of the town of Bragg Creek, and from Highway 1 out west of Scot Lake Hill, and even from a rural area up near Sundre! EMS, since they are on the same system, enjoys the same coverage--EMS units have been at WinterGreen Ski Hill before and talked to EMS Dispatch without troubles.

Talkgroups are as follows:

(Order is: Talkgroup#--Fire Channel ID--EMS Channel ID--Channel Name--Notes)

16400--A1--A1--EMS DISP--EMS Dispatch primary channel
16496--A2--A2--EMS UPDT--EMS Updates/Chatter/Clearing-up channel
16560--A3--A3--EMS UPDT--similar to A2

17040--none--unknown--EMS--possibly A15 in place of 17008

*These frequencies are *conventional* NON-trunked frequencies. I'm still trying to find them out; with the exception of C10, they're used fairly rarely. (C10 is used exclusively when Fire crews are sent to medical scenes. I'm still trying to figure the frequencies out.)

As you can see there appears to be no (or very little) rhyme or reason to how the talkgroups are arranged. I'm told that most "other" Motorola trunks have a much more "mathematically linear" distribution of talkgroups.

The channel numbers (C13, C1, A5, etc) are named so because of the construction of the portable radios the services use. In addition to a rotary knob that selects channel numbers from 1 to 16, there is a three-position switch labelled "A/B/C" on these radios. On my fire department's non-trunked conventional versions of these radios, the A/B/C switch switches between priority scan, non-priority scan, and monitor-one-channel-only; however, on the trunking radios, the A/B/C switch changes the "system". So if you leave the channel knob on "1" and go from A to B to C, you've just changed to 3 different channels (A1, B1, C1).

I have the above information (the talkgroup numbers and channel IDs) in an Excel spreadsheet which can be printed out at the right size to be folded so that it can fit into a wallet, etc.

Anyway.. that's the trunk. Now, on to other area scanning stuff!

This is what I presently have programmed into my PRO-43 scanner for this area.

Formatted as follows: Frequency,User/Owner,ID,Notes

413.8375,Redwood Meadows Emergency Services,Repeater 1,and Voice Alerts

Otherwise, you could just buy my used 11-band, unblocked 800MHz scanner
that also includes aviation frequencies for $125 + shipping.

Get a BC235XLT from Uniden's online store - refurbs and repacks. I just bought one for $150. Super deal. Just like new. Looks like it was repacked and nothing else. Two battery packs, charger.

Earphone sucks. I use a small stereo headset and it really helps. Clear and loud even at low volume.

You get a full warranty. Parts and labor.

The store has a large listing of models and special pricing.

Look for online store at: http://www.uniden.com

Jason Low (lowj@cadvision.com) wrote:
: First of all, I have a monstrous list of freqs for Calgary and area. The TAFL
: is a fine *reference*, but it will never replace GOF (good old fashioned)
: scanner databases, for a few reasons: One, the TAFL doesn't include so-called
: "protected" frequencies.. which includes police.. which includes the new City
: trunk (more on that in a minute). And two, not every frequency that's useful to
: a Calgary area scanner listener will have the word "Calgary" in the license
: info somewhere.

I'd just like to clarify one thing about the TAFL search site noted above:
searching for the keyword 'calgary' would be just about the most
ineffective way to use it. The user is meant to select the Calgary area
and then search for a keyword in the Calgary area. Not all frequencies
that are 'useful to a Calgary area scanner listener' will have the word
Calgary in the license, but they will be in the Calgary file, which you
select when you do your search.

For example, if one were looking for the Calgary Convention Centre's
licensed frequency, you'd select the Calgary region and type in
'convention' (not Calgary!) and see what you get. The search engine's not
perfect, but it works a lot better if you're searching for something in
particular. You can also choose the region and then type in a frequency
you found and want to know who's licensed there. Say you're scanning
along and hear someone talking on 464.1125, and it's not in your local
scanner guide (Radio Shack, Haruteq, or whatever). Use the TAFL search
page by selecting Calgary and typing in '464.1125' -- it'll show you who
(if anyone) is licensed on the frequency.

I agree, the site will never replace some aspects of good old fashioned
databases, because it doesn't have protected frequencies. *But* it is a
true, up to date reflection of just about all other two-way radio users,
(almost) straight from the people who hand out the licenses.

From: akoma@panther.netmania.co.uk
Message-ID: <35c0c24a.5440052@news.easynet.co.uk>
Source record: 150306

Hi everybody!
I have bought a PRO-25 scanner (discouted ex-demo at the local Tandy shop) which came without an instructions booklet. Got the available info from Tandy's web site. The specs are of the US (?) version of this receiver, part No. 20-0505, while mine is No. 20-9505 (Available in Europe -- it's here -- and Australia -- gosh, somewhere underneath the Globe, what a strange place to live ;0 -- as stated on the box).

Perhaps somebody could tell me how I can clear a channel of any freq. I cannot find this info anywhwere in the web material.

Also I would be glad (and gratefull!) if somebody could share some tips'n'tricks for this box.

All the best everyone,

Andrzej Koma

My other scanner is a Yupi 7100.

4281. New Sony Handheld Scanners?

Read what I wrote *dumbass*, I said teleport.com was parg.org's
upstream provider. Are you denying that you post from parg.org
as well as from MCI? I also said it would be an exercise in futility
to complain to parg.org which it would being the Postmaster is
your buddy Justin Bousquet who is also President of PARG.
Teleport may not be your ISP but they are the upstream provider
to parg.org. If Teleport gets too many complaints they can damn
sure pull parg.org's plug for them. Capisce?

Check out the Strong Signals home page there are many scanner reviews including the new Sony. I have the SC1 and love it, it has turned out to be one of the best functioning handhelds for my area I have ever used.

On the contrary. An installation can be designed to survive a direct
hit.
It happens to commercial installations all the time. The tower gets
zapped,
but sufficient energy is diverted to ground that the equipment and
cables
don't get fried.

I don't think I've ever seen an Amateur installation with the necessary
safeguards (including my own), but it *can* be done.

Check out Polyphaser's page (www.polyphaser.com, I think).

POC32 can be found at: http://aab.42.org/poc32/

Wintone (for DTMF etc.) can be found at: http://www.steaksandwich.com/

Frequency Manager can be found at: http://www.interplaza.com/bensware/

Of course, Excel, Filemaker Pro, Access and other apps will work quite well for managing freqs.

Wouldn't someone think the 1000 with no gaps is worth more than the 8000 with gaps? Emphasis on gaps, not radio features/quality. $150 seems like a nice price for a 1.3GHz with no gaps. Just curious.

That standard ignorant answer is getting a little overused, doncha think Mackey?

There is no question that Bill has a Commercial license and knows what he's talking about.

There IS a huge question whether you even have a brain, let alone a license. And your repeated posts about nothing keep asking the question.

4307. Re: Trunk Tracker for GE/Ericison EDACS

Newsgroup: rec.radio.scanner
Date: 1998-07-30 00:00:00 UTC
From: jpryor@my-dejanews.com
Message-ID: <6posqs$n9b$1@nnrp1.dejanews.com>
Source record: 150349
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Here is some information just to clarify trunked radio operations . . .

> The current Trunk trackers work like this: The scanner reads the datastream
> until an ID activates (someone transmits), checks the ID against a lockout
> list, checks to see if it's one of the ID's we want to hear, then changes to
> the assigned channel, waits for the comm to complete, then goes back to the
> data channel. This process then repeats itself. This works for Motorola
> systems because 1. They really don't care what order you have the
> frequencies in, the data channel still assigns it correctly, and 2. They
> don't have any anti-scanner tones.

First of this is sort-of correct, but some key elements mentioned are not, or have no relavance to trunk tracking ability. The radio does not switch to the frequency to listen for the voice. They have dual receivers for the 800mhz range. This is why you still can't track UHF or 900mhz Motorola systems. The radio simply monitors the control channel constantly and then displays IDs along with voice. This is also how the busy status indicator bars light up and go off while listening to a conversation. When it comes to the frequencies used by the system, the Motorola trunked control channel provides the frequecies. Ericsson EDACS only provides a logical channel number to associate with frequencies that are programmed into the radios. Anti-scanner tones really are a point-less part of the EDACS system, other than to make conventional following difficult. The EDACS system knows how to add those tones after each repeater is being brought down.

> The problem is twofold. First you have those damn anti-scanner tones at the
> end! The GE scanners will need to go the addtional step of detecting the
> tones and going back to the data channel before they finish, so you don't
> miss the replies. Kinda tough to do when you aren't listening to the data
> channel anymore.. They'll have to incorporate the G/Wiz board into the
> design to avoid this. So far, so good, but here comes the show stopper:

Those damn tones, again, have nothing to do with the ability to track a system . . . just some added filler that is easily ignored if following the control channel . . . . the radio doesn't need to detect the end of a transmission, the control is what does that . . . why do you think there is a lack of squelch tail with trunk tracking motorola systems . . .

> Secondly, EDACS/GE systems are picky about what order you place the freq's
> in. They HAVE to go in the right order, or you'll jump to the wrong ones.
> It's not too hard for experienced scannists like myself and others to figure
> out (by looking at the data from the data channel via PC connection,
> incidentally) what channels go where. However, try explaining this to a
> newbie, who buys this GE scanner as his/her first scanner, and has to do
> this WITHOUT the advantage of a PC. If you think your BC235 or Pro 90 is

> tough to program, you might as well not even look at this one!

That might be a catch, since the control channel does not contain the actual frequencies, just logical channel number representations, one would have to know all of the frequencies, and have then in that correct order.

> Suppose Uniden goes all out and does one anyway? Then you have obstacle #3:
> The cost. Sure there are the extreme scanner buffs like me who'll buy it,
> but most of the scanning world would be lost on this one, so they'd have to
> sell them for a fortune to make any money. Like $1000 MSRP, or about $700
> street cost to you and me.

I would doubt there would be a significant cost in producing such a radio. The arrangement may even be easier than motorola systems with all of the types and sizes to worry about, etc . . . somes things would have to be looked into like the fact that control channel is 9600 bps as opposed to Motorola's 2400 . . . and then the firmware could easily be developed to follow the control channel. But folks, the real problem right now is most likely the patent rights to the technology which Ericsson has under their guard.

> So, as I said, I don't see one happening for a while yet. But, software guys
> like me are always figuring ways around things like this. More to follow in
> a few months, hopefully...

Basically I believe a EDACS capable commercial scanner could be available If it weren't for all the patent, legal, copyright stuff . . .

But I have my own home-brew EDACS scanner sitting right here on my desk. It envoles a scanner monitoring the data channel, which is being sent to my computer, the computer then anayzles it via a program called ETRUNK, then it controls my second scanner to follow the conversations. Before a Motorola trunk tracker was available, the same people also produced TRUNKER for Motorola systems, and even with my trunk trackers today, I still use it all the time on Motorola systems. First on all, simply find a Motorola control channel, tune the scanner to it, and the program will start following figuring out frequencies and groups . . . talk about taking the work out of it . . . . but very convenient. Not only can you track, but you can annontate groups with text and, the best part is see and annontate idividual radio IDs . . . and even hear Individual Interconnects along with phone patches. But enough on that, the ETRUNK program is very similar, the only real difference is figuring our the freqeuncies manually . . . .

That's about it for now . . . I hope to have informed a few, and inspired some others . . . .

Jeff

P.S. I don't have the TRUNKER and ETRUNK web site address off of the top of my head . . . If someone needs it, I can look it up, or maybe someone can post it . . . .

THANKS!

I'm sure that mailing list will be a much better place now!

I imagine we'll see Bill try to start his own mailing list (again).

I have the following Yaesu FT-50 RD dual band HT packages for sale.
Both radios are MINT and less then six months old. Both radios come
with box, manual, and stock accessories...

Package # 1 :

1- FT-50 RD dual band HT
2- FNB 41 5 watt batteries with OPTIONAL spring belt clip
1- FNB-40 2 1/2 watt battery with OPTIONAL spring belt clip
1- MH 34 speaker mike
1- COMET SMA 501 "miracle baby" antenna
1-MAHA MH-101 drop in charger
1- EDC6 DC adaptor
1-SMA to BNC adaptor
1-ADMS 1D software and cable package

Retail NEW for above is app. $670.00

Selling package for $350.00 shipped to 48, COD is $5.00 extra.

Package # 2 :

1- FT - 50 RD dual band HT
1-FNB 40 2 1/2 watt battery with OPTIONAL sprinf belt clip
1-FNB41 5 watt battery with stock belt clip
1-EDC5B cigarette lighter power cable
1-CT30 mike adaptor
1-SMA to BNC adaptor
1- ADMS 1D software and cable package

Retail NEW for above is app. $500.00

Selling package for $250.00 shipped to 48, COD is $5.00 extra

NO TRADES, I will not "mix and match" packages, and I wish to sell the
packages intact.

E-Mail if interested

Dan

> HAHAHAHAHAHAHAHAHAHA!!!!! This is *rich*!!! Bill has a degree (or two), so
> Mackey has to have a degree.

Funny, when asked to present proof of a degree, Bill can't give a SINGLE
SHREAD of evidence to support his claim of having a degree.

> Bill has a Commercial License, so Mackey has
> to have a commercial license.

When Bill has been asked, he claims to have a commercial FCC license
that the FCC has NEVER issued to ANYONE! When asked to provide proof
of Bill's commercial license he again can't provide proof of any
commercial license & the FCC has NO RECORD of Bill or William having
any commercial license. (Since it is public record, I've always given
my
FCC license numbers when asked)

> Bill runs his own server, so now we're
> supposed to believe that Mackey runs a server!

I've stated before Bill that I run a server. It is only recently,
AFTER I stated my server, that Bill suddenly claimed a server.

> First off, Mackey uses WIN95 and Netscape v4.04. And he most likely
> wouldn't know HOW to use NT... Let alone a server!

Actually, I use my Win NT 4.0 SP3 machine daily. BTW - I NEVER use
Netscape v4.x, I always use Netscape v 3.x due to personal preference.

Its the AR-1000 XLT - 1000 channels, 500 Khz -> 1300 Mhz, no gaps.
I've had it for 2+ years...Its in good condition (been in a the closet
forever, probably used less than 10 hours) with the factory
ni-cads(which seem to work fine), and I have the Designeq hard leather
case & user guide...

Anyone got any idea what its worth? Anyone want to make an offer? I
haven't seen a soul mention this thing on the groups in a long time.
(ideally, I'd like to get the AR 8000 w/pc stuff)

Hey kid, aren't you glad you got a ham license ? now you can join the ranks
of these anal retentive, pompous, self important assholes. Who obviously are
jealous of a kid who can pass the exams.

Other things you'll have to do to be like the 'adult' hams:

- not take a bath or shower for weeks
- wear jackets with all kinds of obscure ham patches, looking like a total dork to the regular person
- eat every chance you get, lest your weight go below 300 pounds, or waistline below 46
- pretend you and your other ham friends are actually needed by the local cops in your broken down homemade 'emergency command post'
- go on HF, and pretend to be on the old CB radio band
- bad mouth the commercial radio guys for suggesting you people get a life

So kid aren't you glad to be joining such a grown up world ?

Just purchased a Pro-90 (excellent scanner by the way) and have a question for some of the more seasoned users. RS also sells a 800Mhz Cell phone antenna that (with a BNC adapter) will fit on this scanner. Can not remember the Cat. No. but it is the one that can be turned 90 degrees. Has anyone tried this or have any other ideas that may show improved reception when doing Trunk Tracking.

Bryan

Whats the best way to connect different tuned antennas. I just built a 1/2 wave dipole for the 500mhz range and I am going to build a 33 mhz dipole. How do I connect them together, and possible a VHF-hi one, too.

What other types of antennas can I build? Does anyone have instruction for building a directional antenna? Any special antenna tricks?

Try putting all the itenerate (sp) frequencies in your scanner and try
that. Both VHF & UHF.

I would disagree with the statement the 90% of RS scanners are made by Uniden. Where are you getting the approximate figures from? The sales of scanners? Radio Shack hasn't released any of this data. I would probably bet that the GRE scanners have been the bigger sellers. If you are coming up with the 90% figure from the various models that were produced, it doesn't come close to what I have researched. Here are the various models that are listed for Radio Shack:

UNKNOWN MAKES (16) : Pro-10, 20, 22, 26*, 27**, 33, 56, 70***, 72***, 2008, 2014, 2020, 2028, 2044, 2056, Comp-100.

*The earlier Pro-26 model was a 4 crystal scanner, not the 200 ch. that has been produced in the last couple of years.
**The earlier Pro-27 was a 2 crystal scanner.
***I have no parts listing on the Pro-70 and Pro-72 although I think that they are relatively newer scanners.

UNIDEN MADE RS SCANNERS (35) : Pro-23, 24, 25, 26, 27, 28, 29, 35, 38, 41, 46, 49, 51, 59, 63, 66, 67, 74, 90, 91, 2023, 2025, 2026, 2030, 2033, 2034, 2036, 2038, 2040, 2043, 2044, 2045, 2046, 2048, 2050.

GRE MADE RS SCANNERS (32) : Pro-31, 32, 34, 37, 39, 42, 43, 44, 50, 57, 58, 60, 62, 64, 508, 2002, 2004, 2005, 2006, 2009, 2011, 2021, 2022, 2024, 2027, 2029, 2032, 2035, 2037, 2039, 2041, 2042.

This listing was created from parts listings and other research at the following sites:

Actually, the antenna you are speaking of has a TNC connector. All cellular phone antennas that Radio Shack has use TNC connectors.

However, you could use it with an BNC to TNC adapter, which is about $4.

Regards.

I wouldn't say for certain, but like you said, I hope so. Only one agency here uses EDACS, but the way "normal" scanners act with this system, I would be glad to get this new one -- if it comes out.

Barry is describing the CB band in lands other than North America. In many other places the CB band is around 477 MHz. Here (US, Canada, etc) it operates around 27 MHz -- 11 meters.

The FRS (Family Radio Service) and GMRS are the 462 and 467 bands, I believe. 7 channels in each of the two sets.

Actually, you've been asked for proof of your degrees for almost three
years now. Since, you never finished high school, I'm not surprised
you can't count or tell time.

Since you've made such an effort to one up Cheek on as many points as
you can, try this challenge on for size, Toilet Boy. You say Cheek
doesn't have any degrees and you say you do. If *you* really think
that is true, get one up on Cheek by proving your degrees *first*.
If what you say is true, you could really embarrass Cheek here. But,
since you're such a gutless pig, you'll shrink from the challenge.
And, don't try that lame argument about being fair or reasonable,
you're neither, so stuff it.

> > Or the

> record since it is issued by the US government. FCC license number
> for my commercial radiotelephone license PG-GP-011350.

Big deal. I have one of those (PG-11-40177), too. I even have the radar
endorsement. In fact, I even have a PCIA (formerly NABER) Certified
Mobile Communications Technician (39628) and a journeyman Certified
Electronics Technician (AZ-291). You need four or more years of
verified experience in the industry to get the journeyman rating.
That's something you'll never achieve, Toilet Boy. You're so inept,
you couldn't put batteries in a flashlight (or a vibrator) and have
it function correctly.

> > You have NEVER been able to provide any information requested by anybody.
> > And I seriously doubt that you ever will.
>
> I guess now you're a liar & fraud!

Perhaps, perhaps not. In your case FOOL, some might say you can't be called a confirmed liar, because nothing you say can ever be confirmed.

> and how to use it?
>
This is apparently a little documented feature of the more recent
productions of the BC235. The "ATT" function is an attenuator which
decreases the sensitivity of the reciever. I have one of the first
BC235's and it does not have this function.

4361. Re: John 'Toilet Boy' Mackey, still a liar and a fraud

Newsgroup: rec.radio.scanner

KA0SSF "I always aims to tell the truth, but I have *really* bad aim" tried to whine and skirt the issue - he is still a liar and a fraud with NO degrees:

> This had NOTHING to do with you at all,

This is STILL about your lack of degrees, Toilet Boy, and your lies about having those degrees. You don't like it because I keep reminding you that you have nothing and no one believes you. If you can't stand a dose of the truth, get out of the newsgroup.

> yet you need to be the center of attention again & attempt to brag
> about your credentials which are good,

You're damn right their good, more than you'll ever attain FOOL. Your vanity is in inverse proportion to your technical expertise (which is zilch).

> but certainly not anything that most people working in the field
> don't have. You credentials are pretty much "run of the mill".

Yes, for *professionals* (that doesn't include YOU FOOL) in the field, they are "run of the mill." Since you're NOT a professional, it's a LOT more than you have FOOL.

You are still just a wanna be trying to play with the big boys. You have no equals - only superiors. When it comes to technical expertise and skills. you are like eunuchs in a harem: You know how it's done, you've seen it done every day, but you're unable to do it yourself.

You have been misinformed. The Pro-90 scanner is not discontinued. I am sure that some day it will be. However, it is not discontinued now. Your local RadioShack should have them in stock now, and if they don't, then they can order them from the warehouse. By the way, I feel the Pro-9,1 after the audio mod, is a superior radio to the Pro-90. That's just my opinion. Those that have a need for lots of channels may feel differently. Fortunately I have many more scanners and only use the Pro-91 for Trunk Tracking.

I have the freq.s needed, I need to know how to determine whether I use AM, NFM,WFM with the freq..

I have been unable to find info on the net. Any info, books or sources would be appreciated.

I am a new guy to scanning using Bearcat 9000XLT with cell mod and discriminator mod, CTCSS installed.

Also looking for recommendations on the HamComm interface.

Thanks,
Toby

You stated quite clearly that you lived in Beaverton. If you actually
don't, you lied - and you should clear that up with the FCC, doncha think?
They need to know PRECISELY where you live for licensing purposes.

> > You lied about the warrant and having proof that one existed,

4371. FS-Icom R-7000 complete package

Newsgroup: rec.radio.scanner
Date: 1998-07-31 00:00:00 UTC
From: ka4993gg@aol.com
Message-ID: <1998073114565500.KAA20919@ladder01.news.aol.com>
Source record: 150126

Pristine unblocked R-7000 with all original accessories, manual and box. It also comes with unused Icom options in their original boxes: TV-7000 tv adaptor, mb-23 mobile mount, wireless remote/board, CT-17 computer interface, and voice syntheiszer.

There are no scratches or problems whatsoever with the radio or the unused Icom options. I will only separate the package if there are enough buyers for all pieces.

A bargain for the complete pristine package, asking $1100 shipped to lower 48 States.

4372. FS-Yaesu frg-9600 receiver, 60-905 MHZ

Newsgroup: rec.radio.scanner
Date: 1998-07-31 00:00:00 UTC

Message-ID: <1998073115001400.LAA21255@ladder01.news.aol.com>
Source record: 150127

Pristine frg-9600 receiver, unblocked coverage 60-905 MHZ in all modes. The unit comes in the original box with manual, fuses, ac/dc adaptors, antenna and unused mobile mount.

The radio also features 100 channels in various scan modes, 12/24 hr clocks, sleep timer, and computer control port.

There are no problems or scratches with the radio. References are available. Asking $425 shipped to lower 48!

I can't say I disagree with you--but why not help the guy out while you're at it???

Jose - my best guesses:

A: is an EDACS data control channel. A busy one, too.
B: is a Motorola data control channel, and it's somewhat distant from you (lots of static, if I heard it right).
C: is unknown to me, likely some kind of misc. telemetry (gas company, water company, etc; they all have little automated stations around here that send data to a head office)

HTH. HAND.

Dude - Greg Knox works for Uniden if I'm not mistaken, so if he's claiming
that Uniden has no such plans, I would put more credibility in his statements
as opposed to other 'people' not privvy to internal corporate strategy.

Replace the antenna. The stock one sucks. Even a 3' jumper wire
connected to the center pin of the coax connector is far superior
than the stock antenna. Makes a huge difference!

Generally the scanner will give you local coms. Fire, police, ambulance, highway dept. etc. Dont expect to be able to hear much outside the local area on those frequencies. Shortwave will give you good around the world coverage, in the event of a large hurricane, earthquake etc. a large area will be affected. If you are outside the area, or in the event of hurricane nets, which are run on the ham bands that a shortwave reciever should be able to hear, then shortwave will give you good coverage. Of course this assumes that power is available....I agree with the cb comment, also always keep at least 3 gallons per day per person of potable water on hand for a 3 to 5 day supply. This is the estimated time that in a large scale disaster that you can expect to be on your own without power, water etc until the emergency shelters can begin to swing into action.

I have one too, you cannot do that, it is all or nothing. As you probably know, it will not accept a frequency of 000.000., I just enter 30.00 (I'm in Canada) as a dummy frequency in a cleared spot until I find a real one to enter there. It slows down the scan a tiny bit but it's better than clearing the whole thing and starting over. Turning on the scanner while holding 2 and 9 down clears the whole memory.This double conversion scanner has very strong image frequency reception +/- 21.6 mhz from the real thing. I have the booklet here if you have further questions or need a copy.

<kcin@whidbey.com> writes

Hi Nick,

>does anybody know of any company that makes VHF aviation ONLY scanners? how
>much? freq range? does radio shack make any? thanks in advance!

VHF only scanners are a little thin on the ground now.

As mentioned by other Sportys sell their JD-100.

In the past their was a WIN-108 (also sold in the US as the mAC-108)
which was a 20 channel (2 banks of 10) VHF airband scanner. There still
around now and again over here on the used market and have quite a
reputation. Excellent performance. There were two versions with later
ones going to 142.00MHz rather than stopping at 135.975MHz.

Yupiteru produced the VT-125 which is a small handheld scanner for VHF
airband with 30 memory channels. The original version did not have 25kHz
step sizes but the VT-125II.

Yupiteru also did the VT-225 which was a VHF/UHF airband only scanner
with 100 channels.

Signal Communications is a name well know to many Airband listeners here
in the UK. They had a couple of airband only scanners with the R-532
(VHF only) and R-535 (VHF/UHF) having almost "cult" status with many
enthusiasts. Neither are available anymore but R-535's are usually
snapped up very quickly should anyone ever trade one in.

A company here in the UK called AYP ELectronics are planning to
introduce a new VHF/UHF airband only scanner later this year called the
SCANAP-1000.

Hope thats of some help.

Cheers,

Why has nobody suggested wide-band (full coverage) scanner? These things can cover from 100kHz right up to 2GHz, , all modes with no gaps. You wouldn't miss a thing there. If it was a local emergency, you'd get fire, police etc. on VHF/UHF, anf if it was a more global catastrophe, you'd get the shortwave/HF stuff as well. Or is that cheating?

If you really gave a damn, you'd have written comments to the FCC on
ET Docket 98-76 (RM-9022). I did.

They want to modify the definition of a scanner and insist upon
ridiculous testing before going to market to prevent image response
scanning.

It's the edge of the wedge. If this becomes a real regulation, the
precedent will have been made for the FCC to "certify" a receiver's
performance (as opposed to just preventing it from radiating).

I've already seen very good replies from the lawyer firms representing
Tandy and Yaesu Munsen. But we're up against some stiff competition
from Bell Atlantic, the CTIA, and AT&T Wireless.

Your rights are at stake here. Write your comments (nicely) or
forever hold your peace.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?"
This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Examine the Antenna to Determine Frequency Band
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and

larger book stores for under $13. Police Call Plus is basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It

is certainly not complete, nor 100% accurate, but is a good book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at

http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists. You can look up civilian aero frequencies for specific airports at: http://www.airnav.com/airports/.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio,

or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at

the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was

permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Examine the Antenna to Determine Frequency Band

You can often determine a transmitter's frequency band by the size and type of antenna used.

The Police Call Plus book contains sketches of antennas. Antenna catalogs are crammed full with antenna pictures and specifications and they are usually free. Contact Antenna Specialists (216-349-8400), Cushcraft (603-627-7877), Tessco (800-472-7373), Maxrad, Larsen Electronics (800-426-1656), and other companies in the land mobile equipment business.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and

store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi

antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip

using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna

Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (828)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove-ent.com

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/hamradio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (828)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. The newest editions contain abbreviated business listings, too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 828-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency

lists are often found in club publications, not commercial magazines, and are discussed later.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation. This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the

scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 fee for 200 hours use of the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83
and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

BUYING A USED SCANNER RADIO

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.
Middlesex, NJ 08846
tel. 908-356-7787

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1999 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

4. If space permits, you can replace the stock resistor with a higher value variable resistor ("trimpot") and adjust to suit.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14

	of MC3357 (IC1)
Radio Shack PRO-2002	R197 47K try 220K.
Radio Shack PRO-2004	R148 47K remove R148
	or replace with 220K.
	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

I cannot furnish schematics, manuals or parts. Service manuals for most Radio Shack scanners sold through mid-1997 may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent and many older models are available on line at: http://support.tandy.com/support_electronics/2849.html. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic

front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

REPAIR TIPS: BEARCAT SCANNER RADIOS

Copyright 1993 - 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

I cannot furnish schematics, manuals or parts. To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. See March 1996 Monitoring Times magazine for BC800XLT capacitor locations and repair information.

The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Jim Craig replaced a 22uF/35V C98 capacitor to repair his BC210XW.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner

owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier activated relay inside the BC890XLT wore out. Andy found the identical relay sold at Radio Shack (part #275-232) and says the BC9000XLT uses the same relay, too.

Replacement Bulbs for BC760XLT

The Uniden BC760XLT's SCAN, MAN, PRI, and HOLD buttons are illuminated by "grain of wheat" type incandescent bulbs. Gary Saffer reports that the bulbs and buttons are located on a small printed circuit board which sits behind the radio's face plate. Gary unsoldered the burned out bulbs in his radio and replaced them with 12 volt Radio Shack bulbs (#272-1092c). They should last a long time when powered by the 8 VDC supplied by the BC760XLT.

Open Resistor in BC140

Robert Casey fixed his deaf, 16 channel Bearcat BC140 scanner. A 10 ohm resistor had opened that fed a circuit that generates 22V for the varactor diode tuner circuits. Without the 22V, there was no tuning of the local oscillator and front end, and no reception. What he did was compare voltages to a second working BC140.

HAMFEST/COMPUTERFEST CALENDAR 1998 - NORTHERN ILLINOIS
last updated June 20, 1998

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, and ARRL for providing some of the information.

AUGUST 1998

Aug 2 (Sun), Peotone, IL. Hamfesters Radio Club. Will County fairgrounds. info: Dave Brasel, NF9N, 6933 West 110th St., Worth, IL 60482. tel. 708-448-0580 (Usually an excellent hamfest - AJ9S).

Aug 8 (Sat), Quincy, IL Western Illinois Amateur Radio Club Quincy, Illinois. Ham Radio and Computer SWAPFEST 1998 8:00AM to 2:00PM. The Western Illinois 1998 Swapfest will be held at the Eagles Alps Grounds (3737 North 5th Street) 4.5 miles north of downtown Quincy, with easy access from US Highway 24. Admission is $3.00 at the Gate ($2.50 in advance) per person, under 12 - Free. ARRL VEC testing for all license classes at 12:30PM. Indoor Flea Market space available for $5.00 which includes one 5' table. Outdoor tailgating space - Free. Talk-in on 147.63/147.03 MHz. Plenty of convenient parking available. Lunch will be served on the grounds. Children's playground area. Card Checking for ARRL awards at 9AM, 10AM, and 11AM. For additional information contact N9JF, jfunk@adams.net.

Aug 30 (Sun), Woodstock, IL. Tri-County Radio Group. McHenry County fairgrounds. Talk-in: 146.52 Simplex. info: Bob Grosse, N9KXG, PO Box 3107, Skokie, IL 60077-6107 E-mail: tcrg@hotmail.com, http://quality-enterprises.com/tcrg/. Tickets: Advance With Double Stub $4.00 - At Gate $5.00 Single Stub - $6.00 With Double Stub . Exhibit Building: 8:00 A.M. - 3:00 P.M. Table Rental: $12.00 For 8' Table. Flea Market: 6:00 A.M. - 3:00 P.M. No Additional Charge For Flea Market Space Info (708) 944-0500. Fax (847) 658-1678. (fairly good, small to mid sized hamfest - AJ9S).

SEPTEMBER 1998

Sep 19, 20 (Sat & Sun), Peoria, IL. Peoria Area ARC. info: Jim Williams, N9HHU, Box 3508, Peoria, IL 61612-3508. tel. 309-692-3378. Fax: 309-698-8643. E-mail: jimeoc@worldnet.att.net, http://www.w9uvi.org

Sept 26, 27 (Sat & Sun), Grayslake, IL Chicago FM Club. Lake County fairgrounds. info: Mike Brost, WA9FTS, 5127 North Monterey Ave., Norridge, IL 60656-3245. tel. 708-457-0966 (the biggest and best hamfest in northern IL - AJ9S)

OCTOBER 1998

NOVEMBER 1998

NOTES - Computer Central and Giant Computer shows

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (847)974-3123. See http://www.gicancomputershow.com

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder

on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760

email: weber@citizen.infi.net

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	
SM-303	X	X	
SM-304	X	X	

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than 70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor receivers of various brands in my collection. This article describes a few of the FM receivers in my collection, and other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews and modifications of these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC895XLT Trunktracker
Mar 1998 - RELM MS-200 mobile
Apr 1998 - RCA RP-6150 portable
May 1998 - Radio Shack PRO-2050 base Trunktracker
Jun 1998 - Opto DC442 CTCSS/DCS/DTMF display
Aug 1998 - Sony SC1PC portable |

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally

generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996, for a review which includes quantitative test results.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot

be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997, for review which includes quantitative test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review which includes quantitative test results.

UNIDEN/BEARCAT AND ELECTRA/BEARCAT

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be

arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service

Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at http://www.grove-ent.com for a review which includes quantitative test results.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older

Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as

federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 channels in 10 banks. Covers military air band, but other frequency coverage is limited compared with the BC9000XLT. Predetermined AM and NFM modes not selectable. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. Weather alert siren. Built-in CTCSS decoder and tone finder. A query feature identifies duplicate memory channels. Test unit scans 85 channels/sec and skips empty channels. Triple conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 MHz images in commercial and military air bands attenuated over 35 dB. For technical test results and a review, see "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in Monitoring Times, December 1997.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during

search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

REGENCY

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby

SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RCA

RP-6150: 1997 vintage. No frills, good performing portable. 200 channels in 10 banks. No military aircraft frequency coverage. Triple conversion and a flexible battery arrangement. Lacks duplicate channel detection, search skip, and empty channel lockout features of newer designs. Our sample isn't super sensitive at 470 - 512 MHz and has some intermod around the VHF railroad channels but is generally more resistant to image problems than the BC230XLT. For technical test results and a review, see "The RCA RP-6150 Portable," by Bob Parnass, AJ9S, in Monitoring Times, April 1998.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. See "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review which includes quantitative test results.

MS200: 1998 vintage. Made in USA. 200 channel mobile with alpha labels. CTCSS and DCS decoding squelch. Programmable via PC using supplied software. Low contrast, LCD display. Keypad backlit for night programming. Rear panel tape audio jack. Test unit had lots of intermod on VHF-high band. IFs are 280 and 0.45 MHz. See "The RELM MS-200 Scanner," by Bob Parnass, AJ9S, in Monitoring Times, March 1998, for a review which includes quantitative test results.

RADIO SHACK

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other

owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be

loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for a review which includes quantitative test results.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound

Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Somewhat prone to intermod in the 460 MHz range. Cellular images throughout the 847.6 - 869 MHz range. See September 1996 Monitoring Times for modifications.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod,

especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT

but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996, for a review which includes quantitative test results.

PRO-2050: 1998 vintage 300 channel Motorola trunk system tracking base made by Uniden. Tight front end. Excellent performance. Chassis-less, plastic construction. Squelch and volume knobs too close and Manual key is hard to find. IFs are 380.7 (approx.), 10.85, and 0.45 MHz. AM and NFM modes are factory set and not selectable. 300 channels in 10 banks and a 2 second rescan delay may be programmed on a per channel basis. Query feature identifies duplicate memory channels. Our PRO-2050 scans at 78 channels/sec., skipping over empty channels. 10 priority channels. Up to 50 frequencies may be locked out from limit search. A single pair of limits may be programmed for a limit search. No Direct key or direct search facility. Factory preprogrammed frequencies for police, fire/emergency, commercial air, public service, and weather, but not marine. See May 1998 Monitoring Times for a review which includes quantitative test results.

SONY |

SC1PC: 1998 vintage. Good RF and audio performance. Covers | 25 - 1300 MHz, minus cellular phone. Selectable step size | and mode. Computer control and downloading with software | and PC cable provided. Powered by ordinary AA batteries. | Provided CDROM includes both the scanner control program and | the multi million record PerCon FCC license database. 10 | banks ("pages" in SONY parlance) of 30 channels each. Per- | channel 2 second rescan delay. Unlike the ICOM IC-R10, you | can scan any combination of memory banks. You can lock out | ("skip") memory channels from scanning. The frequency | stored in a skipped channel will also be skipped during | searches. One priority channel checked every 5 seconds. | SONY's limit search is restricted to one pair of search | limits, though computer control expands this to 20 linkable | pairs. Band search lets you search through 17 bands | programmed at the factory. Service search. A cache, termed | Intelligent Memory, stores the last 10 unique frequencies | that were active for longer than 5 seconds each. See "The | SONY SC1PC," by Bob Parnass, AJ9S, in Monitoring Times, | August 1998, for a review which includes quantitative test |

results. |

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

CRAIG (division of PIONEER)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

SONAR

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no

scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Model	Sonar #chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X		no	
FR105	6	X		no	
FR2512	24	X		no	
FR2513	24	X		no	
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

TENNELEC

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel

programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state,

and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central

time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

>you'd get fire, police etc. on VHF/UHF, anf if it was a more global
>catastrophe, you'd get the shortwave/HF stuff as well. Or is that
>cheating?

Two reasons: First, these radios are expensive. Someone asking the
scanner/shortwave radio question is obviously on a budget.

Second, the performance of these radios is usually quite mediocre for
shortwave. You won't get acceptable performance unless you are
willing to spend many thousands of dollars, and lots of money on a
good power supply.

Please understand, there are compromises which have to be made when
constructing a radio which covers "DC to Light." One of those
compromises is selectivity and another is dynamic range. Those are
the very items which most shortwave receivers are optimized for.

Of course, if you have loads of money and nothing better to spend it
on, then by all means go buy one.

Greg Knox does not work for Uniden, he's a pilot for Delta Airlines. HOWEVER, he is the guy who developed the software and licensed it to Uniden for the current TrunkTrackers, so I'd bet the man knows what he's talking about.

The Reithoffer Shows (Mobile Admusements) travel the country and provides side shows and rides to state fairs and preformances.

Does anyone have their operating frequencies?

They are based out of Gibsonton, Fl.

>could be made by Uniden.

Uniden makes quite a few scanners for Radio Shack. For the "quick and
dirty" method of looking at a handheld scanner and telling the
difference between the GRE and Uniden makes of scanners, it only takes
a glance.

Look at the detailed drawing of the Pro-43 scanner
http://support.tandy.com/support_electronics/doc11/11229.gif. The
Pro-43 is a GRE made scanner. From top to bottom you have the items in
the following order:

LCD Display
Speaker
Keypad

Now look at the Pro-26 which is a scanner made by Uniden
http://support.tandy.com/support_electronics/doc21/21377.gif. From top
to bottom, you have the items in following order:

LCD Display
Keypad
Speaker

Each is just a design that each company has adheared to and makes them
rather distinguishable. For further comparison, you can look into the
detailed parts listings for the CPU. I have used base models for this
comparison since the "average Joe" just couldn't easily look at the
base models and tell the difference. The Pro-2045 (Uniden) and the

Pro-2037 (GRE) are compared.

For the Pro-2045 look at
http://support.tandy.com/support_electronics/doc36/36060.htm and the
CPU is listed as IC,UC1809 HD6433836A86H. Uniden's CPUs will have a
part number that starts with a UC or a HD. Actually both, there are
usually two numbers on the chip, it depends on which one they have
listed first.

For the Pro-2037 look at the detailed parts lists at
http://support.tandy.com/support_electronics/doc30/30425.htm and you
will see the CPU listed as IC3 IC,GRE-9329 MOS UP 8 BIT. Clearly GRE!

I hope that this clears some things up and makes it a bit easier to
tell the difference.

This is disappointing news indeed. I was going to buy two of them,
because I had put in a "T" connector on my cell phone and run two
cables to two antennas, one on each side mirror. That would usually
not do anything, but in this case it almost triples my signal strength
because I have the phone connected to a ground wire which runs to a
tub of salt water in my trunk, and salt water makes a good ground.
I also have a CD hanging from my rear-view mirror to negate the
effects of the LIDAR, and to make it more efficient, I have coloured
the edge of the CD with a green highlighter.

4424. Frustrated with 235xlt

Newsgroup: rec.radio.scanner

Source record: 150179

I just purchased a refurb'ed 235xlt from Uniden off of the internet. Problem is I am not getting hardly any hits at all when scanning. A year or so ago, I had a BC-80 and was able to listen to all kinds of stuff, including some cellular. With this 235xlt, I can't hear shit. Admittedly, I am a neophyte when it comes to trunk tracking. But I'm just talking about conventional scanning. Has anyone else had a problem with piss poor reception on this unit? I'm thinking about purchasing one retail (and later returning it) just to compare it against this one although I hate to fuck a store around like that.

Any suggestions would be extremely appreciated.

Radio Shack does not in and of itself manufacture anything. The products they sell are built to order by various manufacturers. An Asian company owned by Tandy Corp. takes specs/prices from the head office and shops them around all the manufacturers looking for the best price/performance ratio. Radio Shack insists on certain performance and quality standards and if somone can meet them there then a product is produced. Yes, Radio Shack has long term relationships with Uniden, RELM and others outside the hobby of scanning. To say, as others have in this newsgroup, that the "Uniden such and such" or the "RELM such and such" are identical to the Radio Shack product is not quite correct. Color is not the only differentiating factor here. The products Radio Shack sells conform to standards that everyday Americans have to live with day in and day out, not standards set by Asian engineers who live in office buildings. If there is one major strength in Radio Shack it is that we live with what we sell, we hear from our customers about what we sell and we let the people who specify what we sell know what the customers say. If you've never been to a (Radio Shack) senior manager seminar with the people who specify and buy this stuff, you've missed a prize fight that people would pay a lot of money to see someone get beat up so bad. We learn from ours (and others) mistakes and push the manufacturers to higher levels.

I may be jeapodizing my future career with Radio Shack by posting this but it needs to be said, and no one else has (at least recently).

David Deines
A senior store manager who deals with people like you day in and day out.

: ..Only repeaters, and only "non-protected" ones at that. Examples: My fire

Um, only repeaters? On what do you base that?

: department's two tactical simplex channels, even though we're licensed for them,
: don't show up in the TAFL. The new city trunk doesn't show up there, because.. the
: City Police are part of it, and police services are some of the users that are
: "protected". Same for Edmonton's trunk, IIRC

I think it's already clear (and well noted on the site itself) that
protected frequencies aren't in the search files. Do you have anything
other than protected frequencies to point out?

: So long as we're all aware that protected services and simplex channels will have to
: be found elsewhere, yes, I'd agree with you..

Again, your fire department is explicitly not included. You seem to be
saying that *all* simplex aren't included, but you've only given the
example of a protected frequency.

Have you even tried searching for non-protected frequencies?

The BC235 was/is notorious for having defective antennas. Seems the center pin would come out of the connector on the base of the antenna. I have a BC235 but never had any problems along that line. However, since all of the listening I wanted to do on it, was trunking, I obtained a flexible UHF antenna and put it on there. I figure that is going to be closer to the trunking frequencies than the antenna that comes with the radio. I have not had any trouble hearing at all.

Try a different antenna on it and see if that helps. If that doesn't help, if you know anyone who does radio service work, and can put it on a signal generator to check sensitivity, that would tell you whether the radio has a defective reciever or not.

As far as recieving cell traffic, it is unlikely you will hear any cell calls on that scanner, even on the "image" frequencies.

Radio Shack has always been known, in Canada, as the one company that seeks out the innovative stuff. I don't work for them but I've been a long-time customer of them.

Historically, their product styling was not as spiffy as some name-brand products, but I've noticed that has changed in the last ten years. Still, I have always been personally proud to own products branded "Radio Shack". To me the name means products that are often unique (in terms of consumer items offered in popular stores), but more importantly, products that I can get parts for and have repaired for years and years after purchase.

That's why I chose the Radio Shack Pro 90 over the Uniden equivalent. London, Ontario, Canada is not brimming with Uniden scanner retailers, and especially has no such retailer with the longevity in the market as Radio Shack.

We pay a little more for Radio Shack products (in Canada the Pro-90s recently "lowered" price is $399 Canadian). But what we get in return is a product we can have serviced at any Radio Shack.

Still, I don't think that the Pro-90 is, at bottom, quality-wise better or worse than the Uniden. It does have fewer features if the Uniden's extra battery and charger are counted. Each company's product is as excellent, in this instance, as the other.

San Francisco is planning a Motorola type II system to go in service in the in the next year or two. The city of Oakland is using a GE Ericcson system and Alameda couty has a motorola system that includes county fire,ALCO Sherrif's office,AMR ambulances and a couple of city PDs and FDs. I do not know San Joses status re trunking. I allso heard an unsubstantiated rumor that San Francisco may elect to encrypt voice on their system unknown if true.

Bill,

I don't know what serial number you have but if it's one of the recent models it may have an ATT marking above the period key. If so and if it's enabled then that could be your problem. The only indication that the attenuator is on is a single blinking dot in the middle of the display. Pressing the ATT (period) key will toggle the attenuator off/on so give that a try.

If that doesn't work it could be the antenna.

Yes, this sounds like a very good setup for RF and Lightning, but
always expect that your radio will die the moment any portion of your
antenna is hit by lightning.
Your best bet is to use the system, but always disconnect the antenna
afterwards. Its a pain to do this, but it prevents damage, believe me.
Also, something a lot of people are not aware of is that a properly
grounded system also uses a "lightning rod" to allow charges in your
soil to bleed out into the air.
A very pointed rod has little resistance to electrical flow into the
air. That is why you see lightning rods that are very sharp pointed.
A grounding system that incorporates several lightning rods tied to
your very deep ground rods is a really great system if all connections
are solid and noncorrosive. Any junctions that are exposed can be
coated with canned polyurethane spray which is a clear coat that will
seal out mositure and salts that will cause massive corrosion of joints.

>
>Maybe he can shed additional light on this puzzle.....

I spoke with Ken today and he told me basically the same info that was posted here in this thread. I told him from a customers standpoint, the excessively high shipping costs didn't make sense (54.00 for overnight to Miami). On the other hand, the prices of the equipment they sell is VERY reasonable. I haven't found another place that comes close.

Bottom line: They got my business. I ordered a BC235XLT today and had it shipped regular UPS (18.00). Incidentally, other distributors (like Groves) charges 10.00 for shipping (2 day air), but the price difference between the two distributors in this model was 65.00! That's a pretty big chunk of change.

Incidentally, Uniden is very familiar with CEI....they do lots of business with them...according to a rep from Uniden I spoke with.

All in all, I am quite happy with the deal I got from CEI.

I'll post a followup and let people know how quick it gets here, etc. Looking forward to recieiving it and entering the "scanning world"!

On another note....thanks to all who have helped me make this decision by posting helpful responses to my questions. This newsgroup has some knowledgeable and friendly people.

Entirely all of the simplex frequencies I know of aren't found when I try to grep for them in the TAFL.

> Do you have anything
> *other* than protected frequencies to point out?

Sure.. see above (and below).

> You seem to be
> saying that *all* simplex aren't included, but you've only given the
> example of a protected frequency.

No, I haven't. Fire is not protected.. grep for the word "fire" in either of the do23? files. You'll find dozens of hits.

Tell you what--I'm downloading the newest files right this very second, so I'll go check right away to see if the simplex frequencies I'm thinking of are there. The bargraphs say less than 8 minutes remain before I can open the archives. We'll see.

Here are some simplex frequencies I've searched for and NOT found in the TAFL in the past. All of these frequencies are confirmed as licensed and in-use by local services.

412.5500
417.5500
866.4375
868.0875

Well, the files are done downloading.. (lot faster than 8 minutes!) - I'll go check 'em out right now. Okay.. 412.5500 (actually I searched for "0041255") does not show up anywhere in either of the two files. I received no hits in the 866/867/868 band for anything except Cochrane Fire & Ambulance's 3 channels that make up their LTR trunk. None of the above simplex channels were listed. I chose not to try any further searches at the present time..

Oh, I *did* search one more thing. "CITY OF CALGARY FI" - this is all the text that fits in the "user" field for the official licensing name for the Calgary Fire Department. Here's what I found in the 03 July version of the DO23 TAFL:

In DO23A (0->452mhz) -
154.1000 - the old voice paging system that has not been in operation for several years

(they went to alpha pagers years ago)
413/418.3375 - the old Zone 2 frequencies, various towers throughout the city
413/418.4875 - the Voice Alerts, which still function (trivia: the freq to listen to here is 418.4875, *NOT* 413)
413/418.6625 - the old Zone 3 frequencies, various towers throughout the city
413/418.7125 - the old Zone 1 frequencies, various towers throughout the city
413/418.7875 - the old Zone 4 frequencies, various towers throughout the city
413/418.8625 - the old Zone 8 frequencies, various towers throughout the city
413/418.2125 - the old teleprinter system (part of the old Voice Alerts system) - no longer in use

All of these frequencies, I can confirm rock-solid they are not in use any more. I can even say with ABSOLUTE certainty that Zone-4 is gone, because the tower that it was on has been dismantled and the building underneath it (the Shaganappi Bunker) demolished!

Anyway, the point was that none of the simplex frequencies (the old Tac 5/6/7 groupings on the 400mhz band, or the new C10/C11/C12 channels on the new trunk) for CFD are listed.

> Have you even tried searching for non-protected frequencies?

Yup--all the time. In fact, I created a database of both parts (do23a and do23b) to make searching easier and faster. That's when I don't have a copy of xgrep handy--I much prefer using it. One of these centuries I might even get around to modifying the database so that the frequency is listed in megahertz instead of the way it is now (i.e. 866.5875 instead of 000866587500).

I generally only have need to look up emergency services freqs, but every now and then I browse the TAFL just for the hell of it. There are a lot of things that aren't listed or aren't listed where you'd expect them. The former is simply because licenses are issued every day and you can't expect the TAFL to be republished each time a new license comes out. The latter is dependent on who licenses the channel. Example: Airdrie Emergency Services used to have both Fire and EMS trucks on 169.74. They eventually split the system as it is today, but nobody knew the frequency for the new EMS channel.. and if you look up the new EMS channel (171.27) in the TAFL, you find it licensed to 15 East Lake Hill (the public works garage) and the Water Tower.. and the owner/user in both cases is simply listed as "City of Airdrie". No indication whatsoever that it's either AES or the EMS half of the service.

Anyway, in summary:

1. The TAFL is a great reference.. so long as you don't expect to find what you're looking for *every* time.
2. The frequency guides published by local scannists are the most valuable lists you can have for your area.

Think about this one for a while, and the answer should come to you.
Police, Paramedics, Fire, Etc. have no reason to transmit emergency
traffic via shortwave to another part of the world. Any emergency that
would concern you, would be local.

Go to Ham Radio Outlet on Euclid Avenue in Anaheim. Get a copy of the
"Southern California edition of
Police Call". You will find all of the frequencies that you need in this
publication.

4451. Need suggestion for good handheld

Newsgroup: rec.radio.scanner
Date: 1998-07-31 00:00:00 UTC
From: sergio@xe.estec.esa.nl
Message-ID: <6ps44v$jk1@bcalpha.estec.esa.nl>
Source record: 150206

Hello, I need a suggestion for a good handheld scanner. Reading the reviews
I am thinking to choose among the AR8000 and the Alinco DJ-X10 (with the
possibility to add the MVT-9000 but it has the drawback of a bad manual, which
for me is important since I am new to the subject).

I was first going to the AR8200 but talking with a vendor he said that the
AR8200 is not good at all. Anybody can confirm that?

If you have any suggestion please e-mail me; what should be an honest prices to pay?
Thanks in advance to anybody has the will to answer

Sergio

4452. Rensselaer County 800 freqs

Well, I too apart my Pro-25 the other night and one of the PC boards
(for those familiar with the innards, the small one that sits
perpendicular to the two large ones) had Uniden stamped on it clear as
a bell. So even if the whole radio isn't made by Uniden, at least
some of the key components are...like a Rockwell chipset on a modem
not made by Rockwell.

>>Can anyone confirm that Uniden does indeed make other models beside the
>>Pro-90 for Radio Shack,

Actually, Uniden makes most of RadioShack's scanners, and since Uniden is the only company to have the license for the TrunkTracker technology they make all of those radios, regardless of the name stamped on the front.

All you can do is lie mackey, it was not someone from California, it was one of the people that you were forging post and doing rouge cancels on . If they want to referesh your memory they can or you can do your own searching and find the post.

Just keep on lying as it is catching up with you, many more people on the newsgroup are now seeing what a filthy liar you are . People on here don't believe any of the crap your spewing, you and your buddy Roger have been caught doing the email bombs. Both of you figured you could get away with it and not be traced but as you can see it was traced right back to the source.

And as for the warrant you know your guilty of that lie too and your just trying to side step the issue by adding some more lies saying your only defending Bill.

Most of us on the newsgroup know how you feel about Bill and if you were to see him drowning instead of throwing him a life preserver you would throw him anchor so stop with the lies of you were only defending Bill. People on here are not stupid , if anyone is stupid it is you for thinking people are going to believe the crap your posting.

This info is right from their Motorola MCX-1000 VHF alphanumeric radios:
1 151.505 Dispatch
2 151.430 Comm-Tac 2
3 150.635 Fire-Tac 3
4 154.250 Fire-Tac 4
5 151.235 Med-Tac 5
6 151.505 Fire Ground 1 (simplex)
7 151.430 Fire Ground 2 (simplex)

VFD also has a MCX-1000 VHF mutual-aid radio, a MCX-1000 UHF high-band
mutual-aid radio, and a MCX-1000 UHF low-band fireboat radio. The
mutual-aid radios have the dispatch and tactical freqs for most of the
Lower Mainland fire depts.

The fireboats have the following freqs in their low-band UHF MCX-1000:
1 406.9875 Fireboat tactical
2 410.2375 Ports Canada Police (no longer used as PC Police is
disbanded... BUT the rptr is still up, so don't
lock it out of your scanner yet)

The GVRD fireboats are dispatched by the city they serve:
151.505 Fireboat #1 - Vancouver (Main Harbour)
410.1375 Fireboat #2 - North Shore (City of North Vancouver)
154.400 Fireboat #3 - Burnaby/Port Moody
169.230 Fireboat #4 - North Shore (District of North Vancouver)
151.505 Fireboat #5 - Vancouver (English Bay/False Creek)

The fireboats also have a VHF marine radio, and monitor Ch-16 156.800.

UBC is covered by VFD.

Really..? How about the details of your "degrees", then? Or the registration number from your Commercial License..? Should be simple enough.

You have NEVER been able to provide any information requested by anybody. And I seriously doubt that you ever will.

Yes,Uniden makes most of the scanners RS sells,the easiest way to quickly
tell who makes it is look on the back,if it says made in JAPAN,then GRE
made it,if it says made in the PHILLIPINES,then it's Uniden.Some Uniden
stuff used to be made in Taiwan(Bc205 and 950),I don't think they use
Taiwan anymore...
